Melissa King Renewed September 22, 2017 Rock Band 2 allows players to test their musical mettle as they form a band and tackle 84 challenging songs. Players can choose between singers, guitarists or drummers, and then compete in Story mode to become the world's biggest rock stars. Whether playing alone or with friends, Rock Band 2 offers hours of music entertainment for bands like Guns 'N Roses, Journey and Metallica. Before you can play, though, you have to hook up game instruments, one of which is a drum set. Remove the

battery cover of the lower part of the drums. Insert three AA batteries and replace the lid. Insert the white dongle into the USB port on the back of the Wii or into another dongle port. Place the drum underfoot on the floor and connect them to two black support beams. Insert two metal drums into the holes under the base and use the olevils on both sides to adjust their height. Put the drum pads on your feet. Lock them in place using the latches at the back. Put a kick on the pedal floor to support the beams, and plug it into a plug orange socket found on the back of the drum pads. Turn on the drums with a gray switch under the pads. Hold the Drum button and wait until it flashes blue. Press the Sync button in the dongle, then press the Sync button below the drum pads. The drums are now ready for use. eBayWii Rock Band 2 Dongle Awesome team of students from our education program made it wiki. Harmonix Drum Set for the Beatles The band's Wii console, released in 2009, the device repeatedly interrupts the game during use. It is possible that the problem is caused by other wireless signals interfering with the Drum Set connection. In this case, scan the surroundings and look for possible devices that might interrupt your connection. If you think you've found possible devices that might interfere with the connection, move them as much as possible from the drum kit and game system. Another reason for this problem may be batteries exposed to Drum Set. This can be either because they are not inserted correctly or because the device may be corrupted. If the batteries are turned on correctly, there may be a circuit problem in the drum set. Battery replacement Wireless USB dongle and drum kit controller continue to flash, they can not connect to each other Mobile phones, radios and computers can interfere wirelessly causing the drum kit controller and wireless USB donggel to flash. These devices can radiate signals that interfere with the connection between the USB dongle and the drum kit controller. In this case, remove the devices for the drum set controller or simply turn them off. USB dongle may be a manufacturing problem. If any other improvements are successful it is likely. To fix it, you have to get a replacement. To replace it, you must follow the instructions in the link below. The drum pad doesn't feel when it's attacked. If one or more pads do not work, it is because the wires connected to the pads are open. To resolve this issue, you must remove the pad and play the sensor cable so that you can relocate this connection. You'll finally get an answer. You want to make sure that you have a game to be able to control when the sensor starts to work. Drum Pad replacement If it's a foot pedal that doesn't work, check out foot pedal replacement I would like, if someone could please clear it up for me: do I have to get the Beatles RockBand drumset dongle that my drums to work on? Or is the rockband 2 drum dongle compatible with this? If someone could teach me a little more about it I really appreciate it... all model numbers, things I have to look to distinguish, etc. Sorry for my ignorance, I have never had a Wii before, I only used to play rb xbox 360.Thanks in advance for any help. Help.
