Landscape power supply

Textured Black Powdercoat - Hinge Stainless Steel - Slide Cover Textured Black Powdercoat - Slide Cover Stainless Steel - Hinge MULTI-TAP 12V / 13V / 14V / 15V Units Part Number Wattage Length Width Depth Weight Color Style P30075-0510 75 17.5 5.25 5.25 10.7lbs Textured Black Powdercoat Slide Cover P30075-0511 75 17.5 5.25 5.25 10.7lbs Stainless Steel Slide Cover SH30075-0512 75 17.5 5.25 5.25 10.7lbs Textured Black Powdercoat Side Hinge SH30075-0513 75 17.5 5.25 5.25 10.7lbs Stainless Steel Side Hinge P30150-0500 150 17.5 5.25 5.25 14lbs Textured Black Powdercoat Slide Cover P30150-0501 150 17.5 5.25 5.25 14lbs Stainless Steel Slide Cover SH30150-0502 150 17.5 5.25 5.25 14lbs Textured Black Powdercoat Side Hinge SH30150-0503 150 17.5 5.25 5.25 14lbs Stainless Steel Side Hinge P30300-0011 300 17.5 5.25 5.25 16lbs Textured Black Powdercoat Slide Cover P30300-0006 300 17.5 5.25 5.25 16lbs Stainless Steel Slide Cover SH30300-0011 300 17.5 5.25 5.25 16lbs Textured Black Powdercoat Side Hinge SH30300-0006 300 17.5 5.25 5.25 16lbs Stainless Steel Side Hinge P30600-0017 600 17.5 6.50 5.75 22lbs Textured Black Powdercoat Slide Cover P30600-0007 600 17.5 6.50 5.75 22lbs Stainless steel Slide Cover SH30600-0017 600 17.5 6.50 5.75 22lbs Textured Black Powdercoat Side Hinge SH30600-0007 600 17.5 6.50 5.75 22lbs Stainless Steel Side Hinge P30900-0024 900 17.5 6.50 5.75 29lbs Textured Black Powdercoat Slide Cover P30900-0008 900 17.5 6.50 5.75 29lbs Stainless Steel Slide Cover SH30900-0024 900 17.5 6.50 5.75 29lbs Textured Black Powdercoat Side Hinge SH30900-0008 900 17.5 6.50 5.75 29lbs Stainless Steel Side Hinge SH31200-0504 1200 17.5 8.50 7.0 42lbs Textured Black Powdercoat Side Hinge SH31200-0505 1200 17.5 8.50 7.0 42lbs Stainless Steel Side Hinge Standard Features Multi-tap connections (12V-13V-14V-15V) to allow for short or long runs. Epoxy vervat transformator vir stil en koel operasie. Tekstuur swart poeier-jas klaar staal omhulsel vir maksimum beskerming. Termostaat op primêre transformator te beskerm. Magnetiese stroombreker op sekondêre beligtingstelsel te beskerm. Isolasie tipe transformators vir veilige operasie. 6 voetlyn koord met grou prop. Maklike opening omheining met uitklophoue vir harde bedrading en Installation. Din track mounted terminal board makes wiring capabilities simple and fast. Labels, full operating and installation instructions provided. All units are ETL and CETL listed to U.S. and Canadian safety standards. Suitable for wet spots. Assembled in USA Electrical/Mechanical Specifications Enclosure Material: Steel or Mill Finished Stainless Steel Standard Color: Black (Steel Only) Operating Voltage: 120 volts, 60Hz input, 12V-13V-14V-15V. Secondary*, No load output. Outside mounting Transformer should be mounted on the wall, structure, or mail in the VERTICAL position. Cable entries must be positioned downwards. When transformer is used to supply power to a swimming pool, SPA, OR FOUNTAIN use a (GFCI) Ground Fault Circuit interruption located at least 10 feet (3.05M) from the inner walls of pool, spa, or fountain. Optional features 220, 240, or 277 volts, 50/60 Hz input plug-in Timer Plug-In Photo controls Low-Off-High Switch Consult PowerTech Engineering for details. * Increasing hardware and instructions included as a professional landscape lighting designer looking to install and operate a new low voltage lighting system, you will need to convert your standard line voltage outlets using 110-120V in your outdoor low voltage 12V-15V lighting design. This consideration as an outdoor lighting installer lets your landscape lights function properly for many years ahead and will fail problems with lights or end up with poor outputs further down the line of thread connections around the property landscapes, keeping your customers happy and referenting customers for many years ahead. So, to answer the question of How many Landscape Lights I can link to which Transformer Wattage, we first need to look at some of the basic lighting design species and considerations. 1) How many lights will I install? 2) What is the total Watts and Voltage Amp drawing of the landscape lights installed in an area? 3) What wire meter size will I use, 18/2, 16/2, 14/2, 12/2 or 10/2? Critical considerations before the start: If you connect low voltage lights directly to line voltage power, the higher 120 strains will cause them to burn out immediately. Therefore, a low voltage transformer power source should be used, which can then plug into your main power source every night to properly execute your landscape lights. If you don't have a GFI outlet available, look for a professional electrician to install one for your new low voltage lighting system before installing where the transformer longs to be placed out of sight. If using the more powerful magnetic landscape lighting transformers, it's always best not to go about 80% of its maximum wattage rating. Now, to find out how many 12V lights you can power outside with a single layer transformer, check out the wattage and VA VA for the fittings installed. Once considered and calculated with the number of lights running on the systems, you can look for a low voltage transformer that has a higher minimum wattage rating. How many landscape lights you can install on low voltage Transformer power spec considerations: Calculating Voltage Amps as opposed to Watts, will show you the true power pull on your line, and that's why it's advisable to use this number to ensure you don't have a landscape lighting transformer that's not sufficient to power your lighting design installation because it will only have problems for you in the Small Landscape Lighting Design Plan Power Calculations So, if you want to link ten landscape spotlights to a small transformer, and the lights use 2W/4VA/20 watt halogen equivalent light output power each, you want a 100-watt transformer. (Example of calculations: 10 light X 4 VA = 40 voltage amps). Great Landscape Lighting Design System Power Draw Formula Again, if you want to link twenty landscape lights to a low volt transformer, and the light pull 4W/7VA/35 Watts of halogen powertraction on the system, you would need a 300 watt transformer. (20 light X 7 VA = 140 voltage Amps, so it's best to use a 300 Watt) since 150W transformer won't give you enough buffer of the recommended 20-25% under maximum watt rating, for your new landscape lighting system to stay properly lit for many years ahead. Wire plays an important role in your lighting design considerations for Power Additional, when considering which wire gauge to use for your landscape lighting design installation, its best to understand that different gauge has their own pros and cons. Note: smaller wire sizes are often more economical and larger wire sizes are stronger, but the smaller will also reduce the distance of power supplied to your lights in the ground, and may require the channel to remain safe from dreaded landscape cuts to your lighting compounds. In this example of installing your landscape lights with specific thread gauge as another consideration for which transformer wattage is for sale, we can benchmark some calculations knowing that typically, a 300-watt transformer can power 100 feet running using 16 meters, or 150 feet using 14 meters, or 200 feet when using the most popular 150 feet It is always advisable to check with the lighting manufacturers area managers and sales teams before purchasing, to discuss any other factors and considerations to best determine the proper transformer and wire gauge to use for your specific landscape lighting design system. It's always best to double check landscape lights and Voltage Transformer Calculations because there are so many factors to consider creating a professional lighting Project, it's always best to consult your experienced lighting design specialist, as they can advise you on the best type of thread (ie: standard copper, vs anti-corroge wire) along with the proper transformer and landscape lighting models/finishes for sale for your specific apps. Since then, they've handled and managed a very similar installation using the design techniques desired in your area to ensure your new installation works well and worries for free years later. • Up to 15V secondary Crane • Efficiency >85% • Epoxy contained transformer resulting in silent operation and eliminating long-term corrosion • Automatic repair in-line primary overload protection • In-line secondary magnetic breaker(s) to protect against short circuitry in the lighting and wiring system • Large terminal blocks for Our local stores don't honor online prices. Prices and availability of products and services are subject to change without notice. Errors will be corrected where discovered, and Lowe's reserves the right to revoke any declared offer and to correct any errors, inaccuracies or omissions, including after an order is submitted. Submitted.
