## Hemp necklace with beads

Hemp is a durable fiber made from cannabis plants. It is 100% legal to wear and create jewelry with, although it is not yet legal to grow in most areas of the United States. Most hemp is imported from China and is quite crude. It is possible to make hemp fibers soft, like linen, but that quality is rare. However, no matter how rough, any hemp will soften with washing. If you want your hemp jewelry piece to stay as hard as when you made it, try not to take a shower with it. On the other hand, some people prefer a softer, more worn look that can be achieved by washing. When you make hemp jewelry, you are more likely to use the macrame knot or braid technique to make a wire thicker. This guide will teach you the most common knotted techniques used to make hemp jewelry. What you need to Make Hemp JewelryRequired materialsOptional materials and toolsHemp jewelry makes kits provide a selection of hemp twine and seeds and is an easy way to get started. How to choose TwineTo hemp make hemp jewelry, you first need to choose some twine hemp. Although hemp now has many colors, natural signature tan colors are still the most popular. Most hemp jewelry is made from 1mm or 20 lb twine. However, thicker twines can be used to have a good effect, especially for men’s chains. Make sure your twine is an even thickness (not too many lumpy bits) and smooth (unless you like rough textures). You may want to wax your hemp or buy hemp that has been waxed, if you prefer a smoother look. The wax helps to keep the hemp fibers from fraying and gives the finished piece a more uniform appearance. How to choose Clasps and SeedsYou do not need any other supplies to make a hemp necklace. However, you may want to add some beads or charms to liven things up, and a metal clasp to make it easier to put on and off. When choosing seeds, you want to make sure they have large holes, so your hemp twine can go through them. Crow seeds are a good choice. There are many types of clasps, but lobster claws are one of the easiest to use and very safe. The easiest way to attach a clasp is with a metal wire head. These pass through the end of the wire, thong skin, or in this case, hemp. There are several types. The two most common types are those with metal lids bent on the wire and those with coil, the bottom of you bend around the wire. Useful tool To attach metal clasps, you will need jewelry pliers. When you are making hemp jewelry, it really helps to have a means to keep it in place. One option is to secure the battery it into your jeans or a station work surface. Some users of some kind and a book or board, or a specially designed macrame jewelry tool. The two knsmost basic hemp jewelry maps are made up of two basic knots, illustrated below. These knots are each other’s reversal. If you replace these two knots, one Otherwise, you will get a flat pattern. If you repeat just one knot (or one) over and over again, you will get a spiral pattern that looks like a double helix. Make a Hemp NecklaceGet off your beaded board and plan the location of your beads. You may also want to sketch out which parts will be woven flat and which will be spiral weaving. Cut 4 lengths of hemp. The two will form the base (pictured grey above), and they should be slightly longer than the finished piece will be. The other two buttons (blue and pink above) will be used to create the knots and need to be at least 5 or 6 times longer than the finished piece. The length may vary depending on any grain you can add – if you use a lot of large seeds, you'll need less hemp because you'll be making fewer knots. If you want a loop at one end of the piece (so you can use a button or clasp button), cut only two pieces-one for the base and one for the knots. Make them twice as long as you otherwise fold them over, and force a loop. Start knotting your hemp the way you planned in your design. When you reach one grain, just slide it on two base strands, and then tie the next button underneath it. Perfect your hemp jewelryYou have several options for clasps. Experiment and see what works for you! Allow enough hemp to twist or braid the heads and then tie them together. This is the easiest and easiest way to finish. This requires some thinking in advance. When you start your piece, instead of cutting 4 strands, cut 2 strands twice as long, and then fold both in half. Tie an over-knot to create a loop at the top of the fold. Proceed to tie your knot and then when you’re done, tie a large bead, button, or button at the other end. When you stick the grain through the loop, it will catch and hold. You can use a regular clasp if you finish the top of your hemp piece with metal tips or wire wires. These pass through the end of the wire, thong skin, or in this case, hemp. There are two types, one with a curved metal cap on the wire and the other with coil, the bottom with you bending around the wire. Then use the jump ring to add a standard clasp. Learn moreThere are many great books on making hemp jewelry if you want to learn more! We design and produce every single item of hemp and leather jewelry sold in our store. This includes an excellent selection of hemp and skin chains, hemp and leather bracelets, chokers and ankles. Our philosophy is to provide an excellent selection of quality products, excellent customer service, full customization and we stand by our products. If you have any idea what you want to see in our store we will be open to your suggestions. Every piece of hemp and leather jewelry you find here is made from scratch by us in CT, USA. We encourage you to customize the size and choose your own color. We send you on your way to enjoy the unique hemp at a reasonable price! I usually protect the base ring to something powerful, like a table or legs of my pants, using a nail or safety pin. This allowed me to move my hands more freely for looping and pulling. It will definitely help make the process go faster! But it is optional, as seen here. Fold the base fiber in half. This will create a loop that will be part of the clasp of the necklace. Now fold the long strand in half and wrap it around the loop of the base yarn. Cross the left part of the long fiber on the base fiber, then under the right piece of the long thread. With the left strand still underneath the right strand, wrap the strand on the right behind the base fiber. The right spinning (now behind the base) up through the left loop is resting against the base. Grip each strand, both of which should be on opposite sides of the base from where they started, and pull the knot tightly. This is a square button. Remember to push the first knot to the center of the base thread until the loop of the base yarn is the size you want to insert a end knot through. The end button (used as a clasp) will probably be the size of your pinky fingertips, or smaller. You can tie a temporary button using the top of the fibers to measure the size of the required loop. See the introductory pic \*\*\* Dream a Little Bigger Use colorful hemp cords, often found in colorful packages at your local craft retailer, to create these adorable bracelets. For this particular beast, you will want to buy a set of Kumihimo to help you create a beautiful design, quickly and easily. To complete, add jewelry clasps so you can take those bracelets on and off as you please. This way, you can pick out a new Kumihimo hemp bracelet to wear every day, depending on your outfit, of course. Hemp Kumihimo Bracelets from Dream a Little Bigger 1 Choose Your Hemp Twine. Hemp is usually naturally brown, but there are many other colors to choose from. Hemp twine is usually 1mm, although you can find thicker wires. When you choose your wire, make sure it is uniform and smooth unless you prefer a rough twine. [2] You can order hemp online or find it at an art and crafts store or hobby. 2 Decide what kind of chain you want. This method shows how to involve particles and a pendant into your necklace. You can choose to add more beads, or you may decide to only use twine for your necklace. If you decide to use only twine, keep tying the knot as usual and don't worry about stringing on the beads. 3 Cut hemp. Using scissors, cut a hemp 5 yards (4.5 meters) long. Then cut one length, twice as long as the piece of jewelry, plus a few extra inches. This necklace will be about 1.5 feet (~0.5 meters) long, so single yard (nearly one meter) would be appropriate. [3] If you want a shorter or longer necklace, you can measure the bracelet around Add a few feet to the amount that you measure to allow space for knotting. 4 Wax wire cut. Rub your hemp fibers with propolis before starting. It helps keep the knot tight and also helps protect the pieces from getting dirty. You can often find beeswax bars at hobby shops. [4] 1 Fold your rope in half. Fold these lengths in half with a shorter length on the inside and a length of 5 yards (4.5 meters) on the outside. Chains longer than 5 yards (4.5 meters) will form knotted wires, which will be used to create knots, while the shorter chain will be the bearing wire used to anchor the knots. Make sure that the end of each string line is evenly up. [5] 2 Tie an overly hand knot. Tie this button at the top of the rings. This keeps the loops from being un-un unsound. [6] 3 Arrange your wires. Place the shorter strands on the inside. Longer strands need to be outside. If you can't get the ropes to line up just right, you may need to unplug your knot, line the finish again, and then retie the button. [7] 4 Tie a half-square knot. Start by grabbing the wire to the right. Draw it underneath the first two wires on the left and on the last wire. Make a loop with the wire on the right. Bring the wire underneath the first two wires to the left and on the last wire. [8] Carry the rope to your left through the middle two wires and through the loop. 5 Make a button. Hold the two tension center wires and pull tightly parallel to the surface you are working on. Pull up the two outer wires at a vertical angle when the button runs onto the center wire. Tighten the knot when it reaches the top[9] 6 Continue tying the knot. For a flat look to your hemp, replace the side that you started. For this design, keep tying the knot until you reach a length of 2.5 cm (inches), or about 17 knots. [10] 7 String a bead onto two central wires. Protection against the most recent knot. Then tie the two outer wires in a square button underneath the grain. You can keep tying the knot if you don't want to add beads to your necklace. [11] 8 Continue to tie the knot. Continue tying the knot with half the square button as stated above. Do this until you have knotted 6 inches (15.2 cm). You should still have a lot of hemp left over at this point. [12] (15.2 cm). 9 Attach a pendant. Attach the pendant when you have reached about the middle of your necklace (6 or 7 inches more, or 15 or 17 cm). You can add pendants by stringing the pendant into the bottom wire. Continue tying the knot as usual once the pendant is turned on. 10 Add another grain. Continue the button out of the pendant. When you reach the match length between the first bead and the pendant, chain the second bead into the two central wires. Tie the two outer wires underneath. [13] 11 End of knot. For this design, the button differs inches (2.5 cm) from the last grain. Or, end the knot when you have reached that length your wish you to be. You are almost finished with your necklace at this point. [14] 1 Tie the chain. There are several ways you can complete your necklace. You can use clasps, or you can use the easiest method and just tie it off. If you don't want to use applause, tie an overhand button just below the last half-square button. You can apply glue to the knot when you tie it to keep adding. [15] 2 Ends with a metal hook. To use a metal clasp, you will need to finish off the top of the necklace with metal tips or wire wires. You can only use glue regularly to secure tips. Then, depending on the type of clasps you have, you can bend metal clasps on the wire. Or, you can bend the clasp around the wire if your clasps use a coil. Finish by adding jumps to the clasp. [16] 3 Cut excess wire. You can use any kind of scissors to cut excess hemp. Cut about 5 inches (12.7 cm) from the over-knot so you have plenty of length to adjust and tie the line. If you don't think you'll need to adjust it, you can cut off 2 or 3 inches of wire. [17] 4 End. Add New Question What do I do with the second string? If you're referring to the shorter center chain as the second string, they simply go out in the middle and act as anchor wires tied around by 5-yard wires. They are commonly referred to as 'anchor' wires inside. Question How do you get collars to stay in the loop? Add a large enough button to the end, which won't be too big for the hole. This ether will require actual measurement or some serious eyeballs. Ask a question Thank you! Thank! Thank! A hemp pull bead tube with large holes in them (optional) A large pendant (optional) Plain white glue or handy glue (optional) Some ways to force your work (optional) This article is co-authored by our team of trained editors and researchers who have confirmed it for accuracy and comprehensiveness. I came to this site to see the measurements to make a hemp necklace. My neighbors asked me to make him one with a sea turtle charm I had. As of now I only do bracelets, keychain, and dog/cat collars out of hemp or shiny cotton wire used for macrame, plus a few braided leather bracelets. Thank you for your help! more Good boot information, and I learned new tricks. A lot of great information in this article. Share your story
