The OAS link, click here geology field includes several specialized disciplines such as mineralogy - mineral research, paleontology - fossil research, petrology - rock research, geophysics - Earth and its atmospheric physics research, meteorology - weather and weather forecasting research, seismology - earthquake research and volcanology - volcanic research. Read more... Semester 1 Earth Science Exam Review - Students are given a science article in which they read the exam day. The article contains new information on one or more topics that will be discussed throughout the semester (probably geological time or plate tectonics). Students need to read the article and answer a series of questions. Questions may include measuring the mater, calculating metric unit conversions using the factor marker method, understanding of the atomic structure, understanding of Earth's formation, understanding gravity and orbit, star formation and evolution, understanding of the Sun-Moon Earth system, understanding geological time, and understanding of plate tectonics. The exam includes multiple-choice and short answers. You have been reading science data throughout the semester, this reading is interesting and applicable to your semester understanding. Good luck!Mr. BitnickSemester 2 – Earth Science Review 2015 For exam, you will read the section on scientific research. The study involves one or more of the ideas below (probable geological time/plate tectonics), but it involves new concepts and information. In the abstract, you will be asked to find the hypothesis of the research background and underline it. An explanation for the finding is proposed, which can then be tested or with other types of studies. You may be prompted to search for data in the text and put it in a table to evaluate data decoding. scientific research question, you need to identify the predictor variable (variable changed in the experiment) and response variable (a variable that responds to change). You need to interpret the data: Based on this evidence, you will write a statement to help answer the scientific question and justify your answer with the collected data. You will be asked to combine the pattern of data in the natural world outside the experiment. Your next step as a scientist: Science is an ongoing process, you'll be asked to explain whether this study fully answers your original question, what new questions you think should be explored, and what future data should be collected to answer them. Exam Grading Rubric - Rubric Criteria is scored based on different scores as this is the final exam (60 points possible) Ted Ed Video!
