DIY Super ökologisch und unterschiedlich einsetzbar. DIY Für das Sommergefühl zuhause DIY Natürlches Flair für deine vier Räume. Food Lass dich inspilieren. Weihnachten mit HGTV Mit vielen Eleckerlis und Spielzeug! In this instructable I will show you how I made a belt buckle at almost no cost. You will need: Firewood (branch) Sand paper (80, 120, 240, 380, and 600 grit) Linseed oilTung oilSawWire coat hanger Wire cutter 2.0 mm drill bitPower drillSuper glueThe style shown in this instructable is the natural style. Stay tuned for the clean cut style that should be up in the next couple of weeks. REMEMBER: Practice proper safety! Now, make sure everything is the way you want and make any final changes. Stick everything together. Note: I got very lucky in finding that dirt bike track making the whole belt possible. For this project to be successful without the dirt bike track, improvisation is critical. Imagination is the key to this process. My brother always loses his keys around the house and I decided to make him a custom key chain by matching the basic hook. I was going to toss an old band of mine and then I saw this contest and it was inspired! Materials: Belt any material (I used leather) Scissors Measuring tape Large needle and thick Thimble thread or I used a Chopstick to push needle through the skin For the screen I used a piece of card board and thumb pins. I haven't put it in his room yet. Measured and cut both pieces the buckle piece measuring 5 inches and the other about 7 inchesFinding the belt piece with holes folded over a end to make the base chain. I left about an inch and a half to put a keychain inside and started sewing. I sewed the piece of the belt until he firmly connected to himself. I used two different types (running and cloudy) and I used the stick to help push the needle through the skin. I had my brother pull it as hard as he could, and the sewing held up. The buckle will then be placed on the wall (cardboard for display) and easily slipped into the keychain belt. He likes it and goes goes screw it against the wall by placing a screw on top inside the buckle and through the bottom on the skin. In the pictures I forgot to get one from me making the original so I used pictures of what I did my dad loved it so much he wanted one as well! Some of the images are added in case you want to do more. Using scissors to drill a buckle hole and using scissors to round out the end. Have a good time! and enjoy! If you're a fan of the Firefox add-on, add-on collector is for you. The meta-extension brings in a number of nice options for tracking add-ons and themes – either yours or someone else's. You can create collections for personal use to keep track of add-ons you need, or create a list to share with friends or the world. You can also subscribe to collections created by Mozilla and other Firefox users. You need a small setting to create your collections first and start using Add-On Collector, starting with creating an account for the Mozilla add-on site. Once you've set up, you'll have a new Subscriptions tab for the collections you're following, both yours and those shared by other Firefox users. A web developer's toolbox, traveller pack, and reference desk are just some of your subscription options for existing collections. To create your own collection, click a new Publish to button next to any add-ins or theme. Choose an existing collection or create a new collection that can only be for you, your selected friends, or the world. You can also set up the Add-ons Gallery that automatically maintains a collection of all add-ons that you have installed in a specific browser. On the Auto Publisher Settings tab for add-on options, select a name for the collection, whether it will be public, and whether it will also include themes, dictionaries, or language packs. Then click a Create Auto Publisher button and you'll have a list to review at any time you need to reinstall Firefox or install a new browser on a new computer. When combined with other cloud sync and storage tools, such as Xmarks for bookmarks and LastPass for passwords, Add-on Collector frees Firefox from the confines of a computer. With these useful, free tools, you can seamlessly maintain the same custom setting for many browsers. Note: This link takes you to the add-in page in Mozilla.org, where you can automatically file in the Firefox browser.--Erik Larkin Note: When you buy something after clicking on links in our articles, we may earn a small commission. Read our affiliate link policy for more details. To put on a cowboy belt buckle, drag the end of the belt through the clip of the buckle, and the belt button before buttoning the buckle to the belt. You need a belt with two buttons at one end and a buckle. Remove the existing buckle If your belt has an existing buckle, undo the buttons near the buckle and drag the buckle away. If your belt do not have an existing buckle, undo the buttons. Align the belt and new buckle upPosse the belt on the front of it with the end that has buttons facing the new buckle. Place the new buckle on the front of the buckle with the clip side facing the belt. Attach the buckle to the slide belt at the end of the belt through the buckle clip until the metal rod in the clip is centered between the buttons and the parts to which the buttons are attached. Without moving the buckle, fold the end of the belt over, and secure the buttons. Fold the buckle and secure it to the back of one of the belt buttons. Drag the opposite end of the belt through the loops of your pants, and secure both ends when they meet. Skip navigation! Navigation!
