## Fancy bearded dragon size

New bearded dragons? No problem! This page goes over the general bearded dragon information and facts so you can fully understand this lizard. Table of contents Bearded Dragon Description Bearded dragon scientific name is Pogona Vitticeps and these are medium sized lizards, which are usually 12-24 inches long from head to tip of tail. There are many different bearded dragon colors See all the different colors bearded dragons can have. which can sometimes help to tell what environment they come from. Under the head of the bearded dragon will be rows of spiked scales, which when puffed up resembles a beard. These scales can also change colors by turning darker when breeding. Body - a bearded dragon supports four fat legs, and they have a well-muscled flat body with a row of pins that go down each side of the abdomen. Their tail is usually half the length of their body, and unlike other lizards will not fall off and rebuild when threatened. Bearded Dragon History Bearded Dragons are only naturally found in Australia's desert regions. Usually they are found in the southeastern Northern Territory and on the eastern side of South Australia. Their habitats were forests, savannahs and deserts. It is not uncommon to find them in giant branches, on stumps, or rocks during the morning there. Bearded dragons were not introduced to the U.S. until the 1990's. Since then they have greatly increased in popularity and can be found in almost every major pet store. How Big Do Bearded Dragons Get the size and length of a bearded dragon depends on a couple of factors including: Species/Breed Their Environment Their Diet and Health Their Gender Bearded Dragon Species Size The most common bearded dragon species See another type of bearded dragon species. is Pogona Vitticeps, so chances are if you have a bearded dragon, there is this species. The diagram below shows the maximum size based on the type of bearded dragon, but keep in mind that most dragons will not grow as large as their maximum size. Pogona Vitticeps - 24 inches Pogona Barbata - 24 inches Pogona Minor Mitchelli - 18 inches Pogona Minor Minor - 14 to 18 inches Pogona Nullabor - 14 inches Pogona 12 inches of Pogona Minor Minima - 12 inches Pogona Microlepidota - 4 to 6 inches Bearded Dragon Size Based on the environmental of bearded dragons will only grow to the maximum size that their environment allows. This means if you put a young bearded dragon (it's not finished growing) in a cage/tank that's too small Learn how to make sure the bearded dragon tank isn't too small., then they won't be able to grow it to full size. Bearded Dragon Size Based on Diet and Health Healthy Bearded DragonLearn how if the bearded dragon is healthy. will grow faster and larger than a dragon that is malnourished or unhealthy. You can ensure a bearded dragon reaches his or her full size by properly feeding your bearded dragon Learn how and what to feed the bearded dragon. and making sure your bearded dragon stays healthy. Bearded Dragon Size Based on Sex Like Most Animals, males are usually larger than females. So if your bearded dragon is a man Learn how to tell if a bearded dragon is a man or a woman. Your dragon will probably grow into a bigger dragon. How to tell how old Bearded Dragon Sometimes you can get a bearded dragon and don't know how old he/she is. Fortunately, there are some tricks you can use to get an overall assessment of how old a bearded dragon is. Measuring Dragon's Size One quick way you can determine the age of a younger dragon is by measuring a bearded dragon from head to tail. Usually, if the length of the dragon is age (up to a certain point). Below chart is the average size of more than 50 bearded dragons in the first 12 months: Length (inches) Age (Months) 3-4 in.0-1 months 5-9 in.2 months 8-11 in.3 months 9-12 in.4 months 11 -16 in.5 months 11-18 in.6 months 13-20 in.8 months 16-22 in.12 months Determining Age after sexual maturity Most bearded dragons will become sexually mature by 8-12 months of age. This is the point where you can distinguish between men and women. So when you are able to distinguish between bearded dragon sex, you can assume that he/she is 8-12 months old. Please keep in mind that there is no way you can accurately identify a bearded dragon of age without contacting the breeder. Bearded dragons are similar to humans, some develop faster/slower and are larger than others at different times of life. Bearded Dragon Life Span Bearded dragons are usually very healthy and durable lizards. However, their service life depends on many factors. Below is a variety of age ranges you can expect from your bearded dragon: 5 to 8 years old – This is the max age of a bearded dragon to get into the wild and usually be how long the dragon will live if their owner just doesn't have the basics and doesn't pay attention to their bearded dragon diet Learn about bearded dragon health and nutrition. or health. 8 to 12 years - It is possible the life of a bearded dragon that is kept healthy and is watched closely by their owner. 12 to 14 years - Usually the maximum life span of bearded kites, which are kept in captivity. 14+ Years – It's very rare for bearded dragons to exceed a 14-year-old, however there have been rumors of dragons living to be as old as 19 years old... but it has never been officially proven. Bearded Dragons How Pets See more about these LeashBearded dragons were first introduced to the US in the 1990s and since then they have rapidly increased in popularity as So why did bearded dragons be loved as pets? Bearded dragons are usually gentle in nature, and you rarely hear about an aggressive bearded dragon Learn what the signs are of an aggressive bearded dragon., especially for humans. In fact, bearded dragons do not attack when threatened, instead they freeze, puff their throats, and can change colors. They are easy to maintain as well. They don't require walking and following a basic routine can be more than enough to take care of a bearded dragon to live in so teens learn how long bearded dragons can live.. In addition to that, they enjoy being treated and stroked by people. They may squirm the first few times you hold them, but they eventually recognize their master and sit back, relax, and perch on the human body. Determining The Sex of your bearded Dragon indicates if your bearded dragon is male or female is somewhat important. After all, you have to choose some cool bearded dragon names see the list of cool names of bearded dragons. and it helps if you know your gender. There are a lot of shortcuts that people try to take in determining if their bearded dragon is male or female. However, most of these quick tricks are not always accurate. Methods ARE NOT USED: Size - Although men are usually larger, this is not always the case. Some women will be bigger than men. Behavior – Some people suggest that men will only have some behavioral traits, such as turning their beards black and that women usually dragons that wave their hands... however this is not always the case either. More accurate ways to fix Bearded Dragon's Sex There are some more accurate ways to quickly fix your dragon sex without having to take him/her to the vet. Somewhat Accurate – Male bearded dragons usually have a bigger wider head than female bearded dragons. However, if you only have one bearded dragon, it will be difficult to determine what the average head size would be. So you can really use this method only if you know the age of your bearded dragon, and you can compare it with another male/female bearded dragon of the same age. More accurate - Men's bearded dragon tails are usually thicker at the base and the female tail will be thinner and thinner. However, you would need another bearded dragon to compare the tail. Also, the tail tends to get a little thicker with age, so an older woman's bearded dragon tail could be close to the same size as a younger male bearded dragon tail. The most accurate - the most accurate way to determine your bearded dragon sex (without going to the vet or doing something too invasive) is by looking at it at the bottom to see if you can recognize any gender-specific body parts. This can be done by lifting your tail and looking under it (looks directly above the vent/gap). Keep in mind that when you lift your tail you must be very gentle and never above 90 degrees. Your bearded dragon will need to be old enough for you to pinpoint your gender. All the young bearded dragons seem to be women, so you'll have to wait until your beardie is more developed (usually if they are 7-9 inches tall). Male bearded dragons will have two bumps with a hole between them above the vent. These bumps will become common parents your bearded dragon is. Below is a picture of what a male bearded dragon looks like: Female bearded dragons, on the other hand, will have a raised bump in the middle of the tail right above the vent. As mentioned above, almost all bearded dragons seem to be women until they are matured, so if your bearded dragon is still pretty young, don't be too sure she is his just yet. Interesting Bearded Dragon Facts Below are some fun and interesting facts about the bearded dragon. Why are they called bearded Dragons Bearded dragons called bearded because the spikes and scales they have around their heads resemble a beard. They use it as a protective mechanism and will widen their necks when they feel threatened. Is my bearded Dragon Australian? No, Australia made it illegal to export any wildlife in the 1960's. It is believed that all bearded dragons found outside Australia were smuggled out of the country from the 1970's to the early 1990's. The general population of bearded dragons in the United States is so large now that it doesn't need to be imported any more because they can be easily grown. The Bearded Dragons Produce Venom In 2005 the bearded dragon community was surprised to learn that researchers at Australia's Melbourne University discovered that bearded dragons produce mild venom. Since venom is harmless to humans (and most other animals), many researchers believe it was once a feature used by lizard ancestors in the past when hunting. Bearded Dragons Don't Restore Body Parts Unlike some lizards, bearded dragons won't re-grow tails, legs, or anything else. So if your bearded dragon has lost its tail, it doesn't regrow. Types of Bearded Dragons Continue to the next page and learn about different types of bearded dragons. Go to next page » Leopard Gecko Information
