work harder, make less and frustrate you more. It's like the mountain of processed foods in your colon. Get rid of it and life is better. Our go-to tools, our Hyde multi-tool. Get one and you will use it every project, and not just on the mower. Lift. Cutting too low not only torches the grass and begs in weeds to grow, it pointlessly strains the lawnmower too. Lift it to 3-inches---you're not cutting a green for master's---and let sharp knives do a good job. An additional note: If you let your mower lean over too long during maintenance, you can flood the air filter with gas. So don't let it up-ended longer than you have to. If you do flood the filter, either wipe it out for a day or so or get a new one. See all the steps to maintain your lawnmower in this video. Billy Currie/Moment/Getty Images Murray mowers are owned and made by Briggs & Stratton. They are advertised as basic, no-frills which has Briggs & amp; Stratton engines. Murray brand is descendant of Murray Ohio Ohio Company that built car parts, bicycles and lawn and garden equipment from 1919 to 1999. The company was bought in 1988 by the British investment group Tomkins. After several attempts to stay solvent and several sales of the brand, the American manufacturing company Briggs & amp; Stratton bought Murray in 2004. Briggs & amp; Stratton focused its core business on the manufacture of lawn and garden equipment. Most seasonal goods are cheapest when demand is at its lowest, and lawnmowers are no exception. Therefore, the best time to buy a lawnmower is in September and early autumn, after the busy summer mowing season. Mowers take up a lot of space on the sales floor, and most stores don't have room to store their unsold mowers until next year. If you need a new lawnmower and can't wait for the end-of-season offer, consider buying a lawnmower in mid-May. Many retailers have 30-day low-cost guarantees, so if the price drops during a Memorial Day or Father's Day sale, you can go back to the store for a price adjustment. Another way to save is to try to negotiate the purchase price down from the manufacturer's proposed retail price (MSRP). Many smaller retailers will work with you. especially if you buy a big ticket item. If they say no to a discount, see if you can get them to throw in some lawnmower accessories or maintenance items. Even something as small as a free bottle of oil or replacement belt will save you money down the road. Keep an eve out for 10 Percent Off Any Item promotions offered by many big-box home centers. Even if you have to sign up for a new credit card, it can save you enough money to be worth it. You can save a significant amount of money by buying a used lawnmower. For a two-to-three year old lawnmower that is in good condition, expect to pay no more than 60-70 percent of the retail price if you buy from a retailer and significantly less if you buy from someone. It's best to stick to popular, well-rated brands and models so you know what you're getting. Make sure that the mower you are considering does not require expensive repairs that outweigh any savings. If you buy from a retailer, ask what work the store has already done against the mower, why the previous owner sold it, and whether there is any warranty (a 30-day warranty is common). If you're buying from someone, ask if the owner has stored any paperwork on the mower, such as the original receipt and any service records. This will give you a good idea of how the mower has fared. If this information is not available or you are unsure, you can have it looked at by a local retailer or store. Ask them to check whether oil has been changed regularly. A well-maintained used mower can still offer plenty of service for a fraction of the price. If you are handy, you may be able to save even more by buying a lawnmower that needs a bit of work. Check the instructions for part numbers and buy online to get the best deals on spare parts. Take care of your mower so it works well for you. Regular oil changes, air filter replacement and annual service ensure that your lawnmower works efficiently and for many years to come. The best gas lawnmowers will offer you maximum control over your yard, with high power push and self-driving options at reasonable prices. Although these are premium lawnmowers, by 2020 you can find plenty of reasonably priced gas mowers if you know where to look. In our quide we have both self-propelled and pushing lawnmowers. You can find a lot of push gas mowers for under \$300, but you'll usually pay more for self-driving models. This is because self-propelled gas lawnmowers leave you with far less resistance and make your job easier when you're trying to achieve the perfectly striped lawn. To find a cheap lawnmower deal you can check out our dedicated guide and they also have in our guide to the best gas mowers act as a perfect inbetween from regular electric mowers and equestrian mowers. They offer practical dimensions for storage while still offering heavy mowing. The right gas lawnmower for you depends on the size of your yard and your budget. A wide cutting path will make light work of large lawns, but will prove cumbersome in smaller spaces, so take into account the blade's length and width when choosing. In terms of price, you can find gas mowers for as little as \$200. These lightweight models can pack a lot of power on a smaller frame. At the other end of the scale, some of the more premium models in our guide can cost up to \$1000. If you have a larger lawn or you appreciate a professional finish, this may be worth the investment. These models come with powerful motors, electric starters, and impressive guarantees. To find out the exact height you need to cut your lawn to the best height. (Image credit: Honda) We've chosen the Honda HRX217HZA as our best overall gas-powered lawnmower because it has all the features you'll ever need in a lawnmower combined with the amazing Honda engine and build quality. Let's start with the size of the engine and build quality. Let's start with the size of the engine and build quality. WB537SCV-3IN1. You also get two knives with honda hrx217bza and a 4-in-1 Versamow System, which means you can easily switch between this model and the similarly named Honda HRX217VKA, also in our purchase guide, is the addition of Roto Stop technology, which You can stop the blades without stopping the engine, and Hydrostatic Cruise control for simple, precise steering of the mower speed. You also get one of our favorite features, which is the electric key start, so there is no wire to pull. Just turn a key and the mower springs in life. In fact, it's hard to think of a feature of a lawnmower that you'd like and that you can't find here. The Honda HRX217HZA can be expensive, but if you pay a little more you get a lawnmower that will last you a lifetime. Read our Honda HRX217HZA review2. Toro 2033: Best gas lawnmower for large yards (Image credit: Toro)Toro 2033 is a good choice if you have a particularly large backyard. The super-wide 22-inch blade means less time mowing and more grass collected as you do so. It also has a blade stop system so that the blades can be stopped separately to the engine. This means you can keep the engine running, say, if you need to move a branch out of the way of your incision, without having to pull the cord again to start it. Unlike the twin-bladed Honda's in this group test, there is only one blade on the Toro, which means it can't cut the grass so fine for mulching, but it provides a mulching feature and comes with a bag for collecting clippings. Another good addition is what Toro calls Personal Pace, for adjusting the mower speed to a pace that suits you. Some self-propelled mowers can go too fast to be comfortable to go with, so it's a handy feature if you like to walk at your own speed. Or alternatively you can up the speed and get some work out while mowing your backyard. Overall this mower represents really good value for money, especially if you have a large area to cover. There are some seriously high-end features on offer here for a mid-range price tag. Read our Toro 20333 review3. Honda HRX217VKA: Best self-driving gas lawnmower (Image credit: Honda) Honda lawnmowers are known for their large engines, and the HRX217VKA has a really powerful 200cc Honda engine. The Honda HRX217VKA is also self-driving, so it's easy to operate and moves forward with just a touch of a single finger. There is also an auto choke so you can be guaranteed a start on the first attempt even if you have to pull a wire. The Honda HRX217VKA has two blades to ensure a great cut, and of course it has honda 4-in-1 Versamow feature set that enables sacks, mulching. The two knives ensure particularly fine cuts for mulching. What we really like with these Honda mowers is that you get a generous 5-year warranty. Not that you'll need it as user reviews rarely mention mechanical failure. The HRX217VKA is a good choice for you if you want most of the features of the more expensive Honda HRX21HZA, but you will it for over \$250 less and you can live without its blade stop technology, electric start, and and cruise control. Read our Honda HRX217VKA review4. Troy-Bilt TB160: Best mid-range gas mower (Image credit: Troy-Bilt)If you're looking for an affordable gas-powered lawnmower then have all the basic function then the Troy-Bilt 160 is a great lawnmower to consider. Of course, at a price like this you can't expect all the high-end features of something like the Honda HRX217HZA, so it's not self-driving and it certainly doesn't have an electric starter, but you get a really solid 160cc Honda engine. As well as the reliable engine Troy-Bilt 160 comes with an Auto-Choke system, which means that starting won't be a problem even if you need to pull a cord. The Troy-Bilt 160 does more than just basic grass cutting too. It has a 3 in 1 action, so you get a 1.9-bushel rear bag for normal grass cuttings, but also a mulch kit, and side discharge options with this mower. A specialized cutting blade ensures that mulched grass is finely sliced and you get a great fresh-cut look for your lawn. Although it is not self-driving Troy-Bilt has done as much as it can to make it easier to cut with this mower. For example, the rear wheels are large, at 11-inches, so they will help you over rough patches in your grass or hills, too. Finally, it's easy to adjust the height of the blade thanks to duels that give you 6 different height positions. Troy-Bilt TB160 has a number of really good features to its price point, and as one of the cheapest here, it's great value, Read our Troy-Bilt TB160 review5. Cub Cadet SC100HW is a classic walk-behind lawnmower. but in the characteristic Cub Cadet vellow color, and with some really nice features hidden under the bonnet. Cub Cadet makes a variety of lawnmowers all the way up to more expensive models with an electric start button, but this cheaper SC100HW is a pull-start model that has a Sure Start system that guarantees the mower will start at the first or second attempt every time. So there is no priming or choke operation required when you are done. All the user reviews we read prove that it's a well supported requirement and there's a healthy 3-year warranty to back it up too. The main feature of the Cub Cadet SC100HW is that it has a blade that triples your grass cuttings, making it the perfect mulching is important to you then consider the Cub Cadet SC100HW as a nicely priced option. The SC100HW is also a model that is easy to keep clean thanks to a tyre wash system that allows you to attach a hose to the mower and run it to keep the underside manually. Some customers report that the bag may be a bit messy, letting about 15% of Fall to the floor when you remove it, but it's a little niggle on what is otherwise a large lawnmower that is a strong contender in sub-\$300 space. Read our Cub Cadet SC100HW review6. Troy-Bilt)Mowing your yard can be an important part of your weekly exercise regime, and if you feel like you need exercise then it's probably best to stay away from self-driving mowers. Push mowers are also much cheaper, and if you're shopping on a budget, then the affordable Troy-Bilt TB100 could be all you need. Visually it looks very similar to the TB160, which is also in this buying guide, but it has a less powerful 140cc Briggs & amp; Stratton engine. However, another difference between tb160 and this model is that there is no bagging option with this mower. You only get mulch and side discharge. So your cuttings are going to stay on your lawn, which might not be good if you want that clean look to your garden. As you'd expect for a lightweight lawnmower like this, most of the parts are plastic, so durability can be a problem, but it also means it's easy to transport, which is handy if you need to lift it into a truck. There are lots of positive user reviews and people notice that assembly is easy and requires no tools. Also on the positive side, there are 6 cutting positions to choose from, with a lever to help you manually adjust between them. You also have the big rear wheels to help you over the rough spots. As a rough guide, if you're considering getting a smaller lawnmower like the Troy-Bilt TB100 you're looking at a farm size of under a 1/4 of an acre. Read our Troy TB100 review7. Weibang WB537SCV- 3IN1: Best gas lawnmower for reliability (Image credit: Weibang) You may not pay attention to lawnmowers made in other countries, so let us introduce you to Weibang WB537SCV- 3IN1. As you can see in the pictures, it's a serious professional lawnmower, and if ruggedness and durability are at the top of your list when choosing a lawnmower, consider it. Let's start with the engine. The Weibang has a 196cc axle-powered engine, which is some serious power under the hood. Belt drives occasionally get twigs stuck in them or suffer from other problems like slippage when they are wet. In contrast, this axle-powered motor has a 3-speed gearbox specially created for this mower. Everything fits tightly in the engine and forget hunting around for the gasoline hood because it is right on top and easy to access. There are two separate speed (3 settings) and throttle controls so you can turn down the engine when you're not really cutting, or to allow you to idle the engine at lower RPS before turning it off. The build quality is excellent. The deck is made of steel, so it is and robust. The wheels have double bearings. There is a handle wheel adjustment which is really easy to use. But but of all the handle just feels stuck when you use it and you hardly feel any vibrations at all as you cut. Quick-release handles mean that the main lawnmower handle can be folded all the way down, making it easy to turn the machine upside down to clean or store in your garage. The Weibang WB537SCV- 3IN1 ships without oil, so you have to give that yourself. Starting requires a drawstring, and you also need a choke. All in all, weibang WB537SCV-3IN1 is best suited for anyone who has experience using lawnmowers, and is comfortable with different fuel types and appreciates the beauty of the solid build and engine of high quality. If that sounds like you, you'll love this lawnmower. Read our Weibang WB537SCV-3IN1 reviewWhat to look for when buying a gas lawnmower engine power, but for self-propelled mowers, it almost goes without saying that the engine smoother your mower will be, especially if you need to go up and down the bumps or bumps. You should consider anything above the 160cc engine as very powerful for a lawnmower. Self-propulsion technology, which means that the mower's engine can turn the wheels, which takes some of the load off you. It won't remove the push, but it will make it more bearable, especially if you need to go uphill. Mulching: more expensive mowers allow you to mulch or bag your grass cuttings as well as release them off the side. Sometimes the condition of your lawn means it would benefit from mulching, so it's nice to have the opportunity. Blade width: The width of the blade determines how many passes are required to cut your lawnmower. It's a case of the bigger the better. Noise level: all internal combustion engines make a lot of noise, but larger engines tend to be higher, so if it's going to be a problem for you then consider a lawnmower with a smaller engine that produce something like 85 decibels of sound. Cutting height and positions: The best gas lawnmowers allow you to adjust the blade height using handles placed on each wheel. Cheaper models tend to require manual adjustment with a screwdriver. How to maintain a gas mowerWith a big purchase like a lawnmower you will have something that is going to last you a good few seasons, so a little bit of maintenance may be required during its lifetime. If you are in this for the long haul then be sure to follow all the maintenance tips in the owners manual; things like of air filter, and make sure it contains the right mixture of fuels, change the oil regularly, etc., but you might also want to think about how available the engine is when you make your purchase purchase Carburetor problems are the number one cause of a fault in a gas-powered lawnmower, or a spark plug may need to change so that how accessible the engine is can make a real difference. Starting a gas-powered lawnmower have not been specified in a gas-powered lawnmower one cause of a fault in a gas-powered lawnmower. however, come with auto choke technology that ensures it starts on the first or second attempt every time. Alternatively, some gas-powered mowers come with an electric starter that just requires you to press a button or turn a key to get them started. And before we forget – we would really recommend non-ethanol fuel for a lawnmower if you care about the life of your engine. The black charr that forms from ethanol burning is seriously bad news for a small engine. How much do gas-powered push mower, but higher-end selfpropelled models can edge toward the \$900 mark and beyond. At the lower end of the market the models are understandably basic, with very few features, but at the top end you get all sorts of wonders, like blade stop technology, which will cut the blades but let the engine run, so if you need to move a lump of wood out of the way you can do it without having to stop and restart the mower. Mower.
