## The secret handshake trailer

WHERE NEW MEXICO STANDS IN TERMS OF LITERACY SKILLS: 20% New Mexicans ages 16 and over have literacy skills at level 1, lowest level on a scale of 1 to 5. Each level of literacy is linked to a specific set of skills generally accepted where necessary for full participation in society. Individuals on the 1st and 1st of The New York Times Nationally, level 1 ratings go from a low 11% in Alaska, Utah and Wyoming to a high of 37% in the District of Columbia. The national average for individuals at or below level 1 is 21%. Within New Mexico, level 1 ratings move from a low of 5% in Los Alamos County to a high of 35% in Luna County. In terms of literacy rate 2.46% of the population of New Mexico is at or below this level. As a benchmark in practice, almost two thirds (64%) of all jobs today requires literacy skills in excess of level 2, while only 12% require skills at level 1 and 24% at level 2, the Milken Institute study showed. The data on literacy rates are based on estimates using the 1990 census data and the results of the National Adult Literacy Survey reported in the country of literacy in America (National Institute for Literacy, 1998). Literacy rates for all states, including a county of 5,000 residents or more, can be found on . Based on the country's 1,954,599 population and 46% of the functionally illiterate population, it is estimated that 899,115 adults need literacy services. In four states in New Mexico, the percentage of adults without a secondary education exceeds 45% (Mora, Luna, McKinley and Guadalupe). 25% of adults aged 21 and older and 18.5% of adults aged 25 and over do not have a secondary school diploma or an equivalent education. Among 3,500-4,500 students, voluntary literacy programmes are served in a given year. For a list of these programs, see New Mexico Literacy Services. The literacy level is the total number of literate persons (people who can read and write) in a given age group, expressed as a percentage of that age group. The adult literacy rate measures literacy among people aged 15 and over. According to the National Center for Education Statistics, about four in five adults in the US (79%) medium to high knowledge of English literacy. These literacy levels were sufficient to compare and contrast information, pre-raprea and low results. This means that around one in five adults in the US (21%) knowledge with low literacy, which means approximately 43.0 million adults. Of those with low knowledge of English literacy, 35% are white, of which 2% are born outside the US; 23% are Black, of which 3% are born outside the U.S.; 34% are Hispanic, of which 24% born outside the UNITED States; 8% are of other races/nationalities. Adults not born in the U.S. make up 34% of the U.S. population with low literacy. Literacy rates vary widely across countries and are influenced by several factors. New Hampshire has the lowest percentage (5.8%) adults who do not have basic prose literacy, resulting in a literacy rate in New Hampshire of 94.2%. About 36.6% of New Hampshire adults have a degree or a higher degree, the seventh highest level in the country, and 60.8% of the population is registered library users, also the seventh-highest in the country. Minnesota has the second highest literacy rate of 94.0%, with only 6% of adults lacking basic literacy prose. About 69.9% of Minnesota's residents are registered library users, the second-highest in the country. North Dakota has the third highest literacy rate of 93.7%, with 6.3% of adults lacking basic skills for prose literacy. North Dakota has the lowest percentage of registered library users of 35.9%. Vermont has the fourth highest literacy rate of 93.4%, with 6.6% of adults lacking basic literacy prose. Vermont has the highest number of libraries per 100,000 people with 29.8 and has the 8th highest degree or higher degree at 36.4%. South Dakota has the fifth highest literacy rate of 93.0%, with 7.0% of adults lacking basic literacy prose. South Dakota has 16.4 public libraries per 100,000 residents, the fifth-highest in the country. 23.1% of adults without basic knowledge of prose have california's lowest literacy rate of 76.9%. The state of California and the Department of Education are being blamed and sued for failing literacy rates because families and students feel they do not receive quality education in reading and writing. New York has the second highest percentage of adults without basic prose literacy skills of 22.1%, which is equal to a literacy rate of 77.9%. Still, New York has the ninth highest percentage of adults with degrees or higher than 35.7%. Florida has the third highest percentage of adults without basic prose literacy skills of 19.7%, which is equal to the literacy rate of 80.3%. Florida has the lowest number of F public libraries per 100,000 residents of 2.6. Texas has the fourth lowest literacy rate of 81.0% with 19.0% of adults who lack basic prose literacy skills. Texas has the fourth-lowest number of libraries with 3.2 per 100,000 residents. The fifth lowest literacy rate in the US is in New Jersey, where 16.9% of adults lack basic prose literacy skills and 83.1% are literate. However, 38.6% of adults have a degree or more, which is the fifth time in the country. Adult literacy rates are the percentage of people aged 15 and over who can read and write by understanding a short simple statement about their daily lives. The level of Mexican literacy for 95.38%, an increase of 0.41% from 2017. Mexico's literacy rate for 2017 was 94.97 percent, an increase of 0.11 percent from 2016. Mexico's literacy rate for 2016 was 94.86 percent, an increase of 0.39 percent from 2015. Mexico's literacy rate for 2015 was 94.47%, a 0.08 percent drop from 2014. If you live in a developed country, you probably started school at a very young age where you learned to read and write. Unfortunately, not all nations have that luxury. In some countries, the literacy rate is that the number of people aged at least 15 who can read and write is meager. As a whole, the global literacy rate is high. The literacy rate for all males and females aged at least 15 years is 86.3%. Males aged 15 and over have a literacy rate of 90% and females only 82.7%. Developed nations as a whole have a literacy rate of 99.2%. Most illiterate adults live in South Asia, Western Asia and sub-Saharan Africa. Of all the illiterate adults in the world, almost two-thirds are women. There are a total of 781 adults around the world who can't read or write. One of the lowest literacy rates in the world is Niger, where just over 19% of adults can read and write. More than a quarter of males in this nation are literate and only 11% of females are literate. Next comes Chad with a literacy rate of 22.3% Other nations with low literacy rates include: Developed nations of the world have much higher literacy rates with smaller - if any - gender gaps. 31 countries reported literacy rates of 99.0% or more. Four countries reported 100% literacy among their people: Andorra Greenland North Korea Uzbekistan Below is a table of literacy rates for each country. The United States is not listed, but the U.S. literacy rate is about 99%. Support adult literacy in New Mexico! Get updated on the Latest Info Share This By James Burton on August 12 2020 and Society Government spending on education is one of the main factors in the nearly 100% literacy rates of countries like Finland. The literacy rate, which hovers around 100%, is seen in quite a few other countries in the world, including Azerbaijan and Cuba. Andorra is one such country where almost 100% of the population is literate. Part of south-west Europe, its government requires by law that every child between the ages of 6 and 16 must compulsory attendance systems. citizens from many countries the countries of the former Soviet

Union and the Eastern Bloc can claim to have some of the highest opportunities for tertiary education in the world. Over the past few decades, global literacy rates have increased significantly. The main reasons for such a growing trend are the development of the education system of many developing countries and the increased recognition of the importance of education for these communities in their wholes. Nevertheless, many nations struggle to provide educational resources for a better population, build the necessary infrastructure that they need and provide regular enrolment of students in their schools. Nevertheless, even those countries that are lagging behind global norms are aware of the urgent importance of providing high-quality education to the masses for competitiveness and success on the world market. According to the latest literacy and learning surveys, many countries around the world with literacy rates of more than 95 per cent. To help readers learn more about world leaders in this area, we have highlighted the countries with the highest literacy rates from around the world. As much as 100% literacy rates are happening High education standards are seen in countries around the world, but literacy rates in some countries such as Andorra, Luxembourg, Norway, Liechtenstein and a few others cannot be ignored. In the context of these literacy reaches almost 100 percent. Andorra is one such country where almost 100% of the population is literate. Part of south-west Europe, its government requires, by law, that every child between the ages of 6 and 16 must have compulsory attendance in their school systems. The Andorra government has managed to provide free education up to a middle level of education. This, together with the percentage of GDP allocated to the education sector, resulted in very high literacy rates in Andorra. Similar practices are also observed in other countries, such as Finland, where around 7% of GDP is spent on education. Other nations with near-perfect literacy Literacy rates hovering around 100% are seen in quite a few other countries in the world, including Azerbaijan and Cuba. Countries such as Georgia, Tajikistan, Russia, Poland and Slovenia have also reached literacy levels at or close to 100%. According to Russia, it is estimated that 53% of the population there receive some form of tertiary education. The government believes in free education delivery systems and areas that are very focused on stem (science, technology, engineering and mathematics) are in the fields of STEM. If you turn against countries such as Slovakia, Turkmenistan, Uzbekistan and Kyrgyzstan, they remain within close 100%. Slovakia has 20 publicly managed universities and 10 private universities. Really from the many countries that make up the former Soviet Union and the eastern bloc countries, they can claim to have some of the highest opportunities for tertiary education in the world. Should other countries follow their leaders? The reductions that need to be seen as we move from the top of the list for the countries with the highest literacy rates to the bottom can be largely explained by the percentage of individual DVPs of these countries being transferred to the education sector. The lack of educational infrastructure and the importance of the population in the country dealing with educational incoming income has a profound impact on literacy rates. From countries where literacy rates are highest, we see that proactive public instruction policies and highlighting education spending in government budgets can go far beyond the knowledge base of the population.
