Arsenal have agreed to cancel the contract of defender Sokratis Papastathopoulos by mutual consent. The midfielder, who found last season's opportunities limited, did not make Mikel Arteta's Europa League and Premier League squads for the 2020/21 season. The 32-year-old had six months left on his contract, but left Arsenal immediately following a mutual termination agreement. The Greek national defender, who was transferred from Borussia Dortmund in July 2018, is expected to record a CAGR of 10% during the forecast period between 2020 and 2025. Storage and provides storage for the ownership of another company or another company or organization, including services, parts, equipment, vehicles, products, and perseable goods. New York, January 20, 2021 (GLOBE NEWSWIRE) -- the Reportlinker.com report's release of the Storage and Storage Services Market -- Growth, Trends and Forecasts (2020 - 2025) -- This usually includes inventory management and distribution. Storage may be temporary or long-term contractual. Warehouse and storage accommodations can consist of environmental regulations such as temperature and humidity control to improve product life or limit item degradation. Warehouse and storage services can make the customer's property available to take delivery at short time or distribute products on behalf of their customers.- With increased demand for a multichannese retailing model, it is expected to drive the market. In early 2019, Pepperfry announced that it was investing \$12 million (over Rs 85 crore) to build more than 100 offline stores in 2020 and strengthen its supply chain operations to reach more customers. While the online buying trend is embracing, customers prefer to 'touch and feel' in the pre-purchase process, especially before ordering big ticket products such as furniture. Such preferences are therefore expected to increase the customer base, resulting in the expansion of the warehouse and storage market.- In addition, over the next few years, industrial storage is expected to grow in India's manufacturing units. As a stand for things, eight Indian cities, NCR, Mumbai, Bengaluru, Pune, Kolkata, Chennai, Hyderabad and Ahmedabad, have a total of 211 million square meters of quality storage stock. Ft in 2021, according to JLL, a real estate services firm. The Indian logistics and SCM (Supply Chain Management) sector is now worth \$165 billion, with growth expected to reach \$215 billion by the end of 2020, according to a report by Make In India. In addition, the industry employed more than 22 million people, and in terms of overall logistics performance, the World Bank's Logistics Performance Index (LPI) increased India's ranking from 54 to 44 in 2018.- In addition, the COVID-19 pandemic has forced shippers to rethink their supplier networks, rely on stage inventory and internal or 3PL companies and has increased by hours to manage most warehouses. The impact of the epidemic has resulted in many warehouses working even more intensively than ever, especially catering for food products, medicines and basic household goods. Amazon, Aldi, Asda and Lidl all need capacities and additional warehouse workforce. In April 2020, Amazon announced plans to hire 100,000 new warehouse workers to meet sick employees and respond to an increase in orders from customers implementing social distancing. In addition, some retailers and manufacturers are increasingly demanding slowing incoming container flows due to the inability to pick up containers due to warehouses being full or closed. This is because basic service providers responding to COVID-19 are not accepted. To address such problems, container lines provide shippers to reduce demurrage charges by allowing them to store containers on their properties. In March 2020, Mediterranean Shipping Inc. announced the Transit Suspension (SOT) program at six transit hubs in Asia Pacific, the Middle East, the Americas and Europe. The service offering is targeting useful cargo owners (BCOs) and cargo consolidators who need emergency container storage and S some creams should be stored between 2°C and 8°C to maintain the effectiveness of drugs. According to the U.S. Census Bureau, 112.87 million Americans used eye drops and eye washes in 2019. This figure was expected to rise to 118.49 million Americans used eye drops and eye washes in 2019. This figure was expected to rise to 118.49 million Americans used eye drops and eye washes in 2019. This figure was expected to rise to 118.49 million Americans used eye drops and eye washes in 2019. This figure was expected to rise to 118.49 million in 2023. Therefore, increased demand will have a positive impact on the globally cooled storage and storage market.- In addition, when companies see demand for refrigerant storage and storage, we enter this segment to gain a competitive advantage and expand their geographic presence. For example, in October 2019, United Parcel Service Inc. announced that they were expanding their capacity to conduct its last healthcare investment. Adds expansion 1. There are 3 million square meters of private health-care warehouse space and distribution network nationwide, aiming to reach 4 million square meters by 2020. Furthermore, these warehouses will be equipped with climate controls, verified coolers, and freezers to protect high-value special medicine.- In May 2020, Ahold Delhaize announced Americold as its partner to build fully automated frozen warehouses described earlier in the UNITED States. The new facilities are part of the company's previously announced supply chain transformation plan as it transitions to a fully integrated, self-distribution model. The plan would expand cold storage by building two frozen facilities in collaboration with Americold, 24 million cubic meters, or 500,000 square meters. The facilities will be located in Plainville, Conn., which will serve Ahold Delhaize Northeast brands, and Mountville, Pa., which will serve the Mid-Atlantic brands of Ahold Delhaize USA.- Furthermore, CBRE research has investigated the relationship between e-commerce grocer growth and cold storage warehouse capacity in Its Food on Demand Series: Cold Storage Logistics Unpacked, suggesting that an additional 75 to 100 million square meters of industrial freezer/cooler space will be necessary to meet the demand generated by online grocery sales over the next five years. The COVID-19 pandemic will likely accelerate the need for this area and have five long-term impacts for the cold storage industry. Given that almost 95% of food imported or produced in the United States passes through third-party distribution centers before reaching customers, this change will undoubtedly positively impact the cold storage sector. North America is expected to have a large share, with warehouse and storage revenues expected to grow by 2.1% from 2018 to 2023, according to the U.S. Census Bureau. Revenue in 2019 was \$36.6 billion, compared to \$35.6 billion in 2018. With significant growth in manufacturing units, retail sector and pharmaceutical units, the market shows a potential increase in the United States. It is also estimated that the GDP value of transport and storage (source IMF) will contribute \$22.24 billion, and the significant contribution will be in the state sector, wholesale trade, manufacturing, etc. In addition, players are constantly focused on expanding their own facilities that drive significant market growth. - As only a small part of the industry in North America is outsourced, third-party storage and distribution has a significant market growth. - As only a small part of the industry in North America is outsourced, third-party storage and distribution has a significant growth opportunity for players, and e-commerce is growing. In other words, players are expanding their own facilities by making expansions, mergers and acquisitions. In February 2020, Maersk announced that it would increase its North American storage and distribution capacity by purchasing the U.S. Performance Team in a deal worth \$545 million (about \$225 million). Since many retailers are looking to grow online retail sales, the company has focused primarily on strengthening its ability to perform e-commerce.- In addition, Gebrüder Weiss has announced a new warehouse location in California's leading logistics and distribution center, Inland Empire. Located at 11201 lberya Street in the Jurupa Valley, the new 100,000-square-foot facility is twice the size of Gebrüder Weiss' existing warehouse in Torrance, California, where he employs about 20 workers. Furthermore, the company is expanding its original growth strategy in the United States on the West Coast of Q2 in 2020 with the new Inland Empire warehouse and is looking at additional expansion of the Midwest by the end of the year. Lucrative The industry has pulled a significant number of new ers, lean startups pop-up fulfilling services and relatively new 3PLs.- For example, recently, in March 2020, Amazon .com Inc. opened a series of small warehouses close to major U.S. cities in a move to shave closed hours of delivery times. The company is focused on same-day delivery schedules for retailers in Phoenix, Philadelphia, Dallas and Orlando. The initiative underscores the company's goal of staying fast in online retail and exceeds competitors' offers of free two-day delivery, keeping shoppers loyal to Streaming Club Prime, Amazon's shipping and media streaming that costs \$119 a year in the United States. As U.S. consumers increasingly receive direct-to-home groceries (D 2C) or online purchases and stores (BOPIS), demand for the food and beverage industry in the United States, COVID-19 is being significantly disrupted. Competitive Landscape The market for storage and storage services is very competitive, especially due to the presence of local players. The competition is expected to be intensified in the future due to relatively low entry barriers that encourage new entries to enter more. Long-term partnerships, mergers and acquisitions, and high investments in warehouse management software are the main growth strategies that companies adopt to sustain intense competition. Vendors such as DHL Supply Chain, XPO Logistics, Inc. and FedEx Supply Chain are several key vendors. A few recent developments include: - January 2020 - DHL announces the development of storage and supply chain capacity as it wants to tap into the booming e-commerce business driven by German logistics giant Amazon and Walmart-owned Flipkart. DHL currently runs about nine million square feet of storage and supply chains in India. - December 2019 - NFI increases its presence in the southeastern United States by purchasing G& P Trucking Company Inc., a transportation firm based in Columbia, South Carolina. The acquisition of G&P will add 370 tractors to NFI's fleet, bringing the total to more than 3,000. NFI, which added 3,000 of G&P's fleet to its work in certain vertical areas, including the automotive, retail and textile industries, will now have more than 12,500 trailers.
