To plant the filter system, run the water through the dispenser for three to four minutes to wash before use.&gt; Frigidaire is one of the most popular brands of home appliances in the USA. His journey began with self-contained refrigerators in 1916 and has since been a reliable name for household needs. Together with refrigerators and freezers, a wide range of products are now produced, including air conditioners and automatic washer machines! Frigidaire Gallery's collection includes refrigerators, cookers, dishwashers, wall ovens and microwaves. Although they are quite well built, their water filters have a limited service life. So you should know how to replace frigidaire gallery water filter effectively! That's why we'll discuss how to replace the Frigidaire Gallery water filter today! Here we focus on refrigerators and dishwashers, because these devices are the most reliable in the water filter. How to replace the water filter in the Frigidaire refrigerator Although these refrigerators belong to the same Frigidaire brand, they differ greatly in design and functionality. That is why the methods of replacing their filters vary greatly. So we are here to walk through each of the four water filters produced by Frigidaire. ● PureSource Ultra This filter line is specially made for a refrigerator line called French Door. PureSource Ultra water filters can remove contaminants with a success rate of up to 99%! It is also certified by WQA and NSF. You can count on adding some vibrant berries of red color to your fridge as well! To The existing PureSource Ultra water filter from your refrigerator, just push it once and then pull it out. Take a new filter and get rid of its protective caps. Put it in an empty old place and push it enough to protect the new filter. Now run the water for about three minutes and see if it works properly. ● PureSource 2 As you can tell, this is the second edition of puresource line water filters. It also helps to destroy 99% of the contaminants. Although Ultra was a push-push filter for French-Door models, it is a cassertic filter for refrigerators after 2004. The puresource2 filter replacement process is quite similar to the previous one. Here you need to push the release button so that the old filter comes out separately. After removing it, prepare a new filter by removing the protective caps. Scroll this new one until you hear it clicks on the position. Now take an empty glass or container and pour it with water in this refrigerator for about three minutes. This will allow the water to operate long enough to prepare and prime the filter before real use. ● PureSource 3 This filter has a very similar shape and design to puresource 2 water filter. You can identify it in the upper right corner of the refrigerator. Open the refrigerator door and notice the water filter. Similar to the other models mentioned above, you will have to push this to remove it. But this time it may take a little more effort, because the pushing must be a little more lazy. After removing the old filter, prepare a new filter to take it to the place. This new one should have two horizontal ridges - along the top and side. This will help the filter to sit safely in place. So slide it directly into the older filter slot and push it until you hear the click. Now run about two gallons of water through the refrigerator so that you can remove all the sediment. After you complete this step, successfully start using the filter regularly. ● PureSource Plus If you have a Frigidaire refrigerator manufactured before 2001, you will need a PureSource Plus water filter to replace your current one. This one is made in the shape of a cup and easily recognizable on the front of the refrigerator. You will need to rotate it off counterclockwise motion to remove. So first remove its casing with a twist and then remove the filter inside. Then remove the protective contraction wrap around the new filter. Insert this vertically into the previous slot with the tip side up. Now put the dwelling back in place by turning clockwise. To prepare the new filter for normal use, allow the dispenser to run water for three minutes or more. This will be the main filter for safe enough use. Note: Don't forget to change the water filter every six months the best filtered water quality for your refrigerator! How to replace the water filter in the Frigidaire dishwasher Although frigidaire gallery dishwashers have a default water filter, you may need to replace it if its material is clogged or damaged. Dishwasher water filters are very different from refrigerator filters. They are much larger and completely round with a hollow center. Be sure to turn off the dishwasher power supply before replacing the filter. Then open the dishwasher door and completely remove the bottom rack. Now you need to disassemble the filter part. Start by turning a small tab around the circle to 90 degrees. This will release the whole part and reveal to you the old filter. Separate the main wider filter from the central base filter. Put this smaller base in a large new filter after cleaning both parts. Protect it by moving through your new filter, pushing it down and turning it slightly until you hear the click. Collect the entire setup in the same way as before, and put the bottom rack back in your position. Close the dishwasher door, plug in and turn on the water to test the new filter! Conclusion Now that you know how to replace the Frigidaire Gallery water filter in a great way, you don't have to rely on an expert anymore! It is very easy to do and lasts only a few minutes. So enjoy drinking clean water every day or washing more efficiently with your new water filter! Frigidaire Professional Series refrigerator uses PureSource Ultra water filter to remove chemicals and impurities from tap water. Water circulates through the filter before reaching the ice maker and dispensing from the refrigerator door. The filter cleans up to six months or up to 200 gallons of water before it needs to be replaced. Frigidaire refrigerator can stop supplying water and produce ice until you change the water filter. \$18.98 \$18.98 to \$28.24 to \$28.24 Visit the emergency department or contact us at Kenmore/Coldspot (106.
