Your weather when it really matters™ Resort Conditions Packaged Powder. Snow Height Snow Last 24 hours Data provided by data provided by your weather, when it's really important™ Daily Max UV Forecast Our hourly UV forecast calculations begin with the use of the predicted thickness of the ozone layer at a specific location, as provided by the Royal Netherlands Meteorological Institute (KNMI). Then we take into account the angle of the sun, which depends on the latitude, season and time of day. Finally, we'll use the predicted hourly cloud and precipitation information to make the UV forecast as accurate as possible for your location. Raw data provided: Royal Nitherland Meteorological Institute (KNMI) Sun Exposure Risk UV Index Recommended protection Low 0-2 Safe to be outdoors - No protection Required Moderate 3-5 Take precautions such as covering during lunchtime, wearing a hat and sunglasses and using sunscreen. Stay in the shade at noon, when the sun is strongest. High 6-7 Wear sunglasses and use SPF 30+ sunscreen, cover your body with protective clothing and a wide-brimmed hat, and reduce the time in the sun from three hours before to three hours after sun noon. Very High 8-10 Wear SPF 30+ Sunscreen, Shirt, Sunglasses and Hat. Do not stay in the sun too long. Extreme 11+ All precautions including: wear sunglasses and use SPF 30+ sunscreen, cover the body with shirts and long-sleeved trousers, wear a very wide hat and avoid the sun from three hours before to three hours after hours of sunlight. Sign in to use this feature. No photo was found. Another 7 days Period when the sun is not more than 6 degrees below the horizon at sunrise or sunset. The horizon should be clearly defined and the brightest stars should be visible under good atmospheric conditions (i.e. no moonlight or other lights). One should still be able to perform normal outdoor activities. A period of time when the sun is between 6 and 12 degrees below the horizon at sunrise or sunset. The horizon is well defined, and the outline of objects can be visible without artificial light. Normal outdoor activities are currently not possible without additional lighting. The time period when the between 12 and 18 degrees below the horizon when sunrise or sunset. The sun does not contribute to the lighting of the sky before this time in the morning or after this time in the evening. At the beginning of the morning astronomical dusk and at the end of the astronomical dusk of the evening, the lighting of the sky is very weak and can be undetectable. Civic sunset time minus civic sunrise time. The time of the actual sunset minus the time of the actual sunrise. Changing the length of daylight between now and next is also indicated, if available. Available.
