Both organizations require applicants to have a high school diploma. Step 4 Become skilled Some pharmacy technicians choose to work exclusively for a chain of retail stores and will complete specialized training to serve as general pharmacy technician, community pharmacy technician or central pharmacy business technician, or in a similar role. Pharmacy technicians should be able to measure, mix, dose and administer appropriate quantities of medicines based on the pharmacist's orders. They can also participate with data entry tasks to update patient records and fill prescription orders. Pharmaceutical education Sometimes, pharmacy technicians should read and interpret pharmaceutical literature and prescription information. Even though pharmacy technology certification and degree

programs require practical training, some general course tasks can be completed online. Many accredited schools offer online pharmacy technology programs that make it easier for a student to take care of a family or who is working a full-time job to complete their education. Here are some things to look for when exploring online pharmacy technician schools: Accreditation The American Society of Health-System Pharmacists (ASHP) and the Committee for Certification (COC) accreditation pharmaceutical technical training programs in the United States. Enrollment in an accredited program ensures that the program maintains a high level of quality and complies with the requirements of the accreditation institution. Hands-on Training Opportunities Since most certification and degree programs for pharmacy technicians require practical training through an externship or similar training, it is important to determine what kind of partnerships the school has secured for externships. Some schools offer externship placement as a courtesy to students, while others require students to seek and apply for training on their own. In any case, students are usually responsible for organizing their transfer to the pharmacy, laboratory or other approved facility to complete this element of the program. Certification Preparation Certification is not required in some states, but most employers prefer pharmacy techs to be certified. An online pharmacy technology certification program must provide comprehensive training to prepare a student to sit for the Pharmacy Technical Certification Board (PTCB) exam. Those interested in certification of the National Health Care Association (NHA) must have at least one year of work experience, which can be obtained through an externship program offered by the school. What skills are required? Pharmacy technicians should have strong attention to detail, since the majority of their daily tasks involve measuring, administering and distributing prescription drugs according to very specific orders. They must also have good written and oral communication skills to communicate effectively with the pharmacists with whom they work, the patients and medical professionals or the medical representatives with whom they come into contact. Pharmacy technicians need to take a leading role in their training on information on medicines and any significant changes occurring in the industry. They may be asked to read about drug studies, review pharmaceutical literature or produce reports on different prescription drugs and distribution activities. Since many work in busy retail pharmacies or emergency rooms, they should also have strong organizational skills and be able to work in a fast environment without making mistakes. Credentials In addition to becoming certified Technician (CPhT), pharmacy technicians can obtain other certifications that allow them to explore attractive job opportunities. Options include: Sterilized Products (IV) Certification Certified Pharmaceutical Industry Professional Chemotherapy Certification Complex Certification Nuclear Pharmaceutical Technician (NPT) Training Tools and Technologies Pharmacy technicians are usually trained in all medical software programs used by the pharmacy so that they can complete prescription orders accurately, manage patient billing information and coordinate patient communications in due course.
