The best way we've found to describe what the Baby Brezza Formula Pro does is that it's like a cross between a Keurig machine and a high-end coffee machine. But for baby formula, of course. For this review, I spent 2 months (and counting) using Formula Pro to make formula for my son Calvin. Here's a quick video of me going through the setup and use of the Baby Brezza Formula Pro Advanced, and sharing some thoughts on the experience: Ok, let's dive further. Since Calvin's adopted and formula-fed, the two months I spent reviewing Formula Pro Advanced added up to a lot of bottle manufacturing and heavy use of the machine. After all this use, I've distilled down my thoughts in this Baby Brezza Formula Pro Advanced review and included awesome, wished it was different, some tips on setup and use, and a verdict. For this review we cover (click on a link to skip to this section):

What is Baby Brezza Formula Pro Advanced? In short, Baby Brezza Formula Pro makes bottles formal. But it is a simplification. The best way we've found to really capture what it does is a cross between a Keurig machine and a high-end coffee maker. You do not use pods, but rather dump powdered formula (you can use almost any brand you like) in top of Formula Pro Advanced, add water to Brezza's water tank, and press a button. When you do this, Formula Pro Advanced will mix the formula with the hot water in the tank (it heats water to about 98 degrees and keeps it at the temperature until you are ready to make a bottle) to create a perfectly mixed and heated bottle, all in less than 20 seconds. Formula Pro Advanced has 700 grams of formula and 50 ounces of water - enough for 9 six-ounce bottles before you need to replace the water, and about 25 six-ounce bottles before you need to add more formula. The water tank in Formula Pro Advanced keeps water at a constant temperature at all times, which means it's ready to go with the push of the button, and you don't have to wait for the water to warm up, which is how the device is able to achieve such a quick time to finish the bottle. Initial SetupThe original Formula Pro was a beast of a machine. It had a relatively large footprint and came with 13 removable parts in addition to the main unit. Formula Pro Advanced is a little smaller, and really cuts down on the removable parts that need cleaning. In the original Formula Pro, there were 7 removable parts in the formula container, in advanced version, this has been reduced to only 3. All these parts come dismantled (Baby Brezza recommends that you sterilize all parts before first use), which may seem a bit scary at first, but in practice we found it was relatively straightforward and quick to assemble - it took about 30 minutes, including the initial washing and drying of parts to sterilize them. The instruction manual was clear and included images as a visual guide. The parts used to hold and mix the formula in Formula Pro AdvancedA other major upgrade with Formula Pro Advanced is that while the original had to manually set the number corresponding to your selection formula with Advanced, you can set this on the digital display and change it at any time. You still need to figure out the right number for your brand, which involves going to a page on the company's website that's a little hard to find (here's a direct link to it), and then setting the screen to the number that corresponds to the formula you're using. In the end, especially after using Formula Pro Advanced a few times and discovering how quickly and easily it was compared to other methods of making a bottle, the original setup was worth the half hour time investment. How to use Formula Pro AdvancedFnce Formula Pro Advanced stores formula and water and keeps water at the temperature you want, using it is incredibly simple. Provided you have enough water and formula (there are clearly marked lines on each holding tank that indicate the need to refill), just put a bottle under the spout, select the size bottle you want to make (options anything from 2 to 10 ounces, in one ounce intervals (another upgrade from the original, which only made 2, 4, 6, 8 or 10 ounces), hit the start button and you're off to the races. Formula Pro Advanced is designed to work with almost any baby bottle and handled the large Dr Browns bottle we used quite easily. It even has an adjustable bottle holder that moves up and down depending on bottle height to prevent splashing. Pushing the start of the Formula Pro causes it to start turning all the wheels you put together in the initial setup process, and with some mysterious means mix the formula and the hot water together, and then funnel the finished formula into the bottle via the spout. Because you have set your size, Formula Pro Advanced automatically stops after it has produced the correct amount of formula. The length of this process depends on the size of the bottle you make, but all are pretty darn fast - 14 seconds for 2 ounces, 30 seconds for 10 oz. You can actually make a bottle of water that is not fully heated, which was useful when a few times I realized that the water tank was empty, and when I had a hungry baby in the middle of the night it was better to have a bottle of cooler water than to wait for the water to warm up. DesignThe Formula Pro Advanced moves the water tank from the side where it was placed on the original to the back, where it is out of the way, creating a slimmer profile and slimmer appearance. To provide easy access to the tank for refills and cleaning, Advanced has a small set of wheels at the bottom that allow for easy rotating. Cleaning and maintenance Formula Pro Advanced cleaning and maintenance requires a bit of work here and there, which falls into three categories - adding more formula and water as needed, cleaning you should do after multiple uses, and monthly sterilization. Adding more formula and water Every 20-50 or so bottles you make, depending on the current size of bottle you use, you need to add more formula. This process was incredibly simple - just remove the lid and dump in a bag or scoop formula out of a container. Slightly more frequently – every 6-25 bottles depending on size – you need to add more water. The water tank is removable, so you can add water directly by placing it under the faucet or your filtered water source, but Baby Brezza does a great deal about not getting any water under the tank, so I worry about using this process. Instead, I ended up using a large water bottle to pour water into the tank while it was attached to the device. More frequent maintenancelnysse for Baby Brezza, you will want to clean the funnel piece after every fourth use to remove any formal buildup. This piece is easily removable, so it's fast, and Advanced has an indicator on the digital display to remind you when it's time to do this. (Please note that Pro Advanced forces you to clean the funnel, but in practice you can just pull it out and put it back in again.) One place I noticed gunky formal buildup more often than Baby Brezza suggested was at the bottom of the formula canister, where the water interferes with the formula. I ended up cleaning this after every 5 or so uses. The times I forgot and waited longer than that resulted in some very crusty buildup that required some scraping to remove. I used a fork for this and found it strangely satisfying to do. Once a month sterilizationOnce per month Baby Brezza recommends that you completely separate the device and sterilize the water tank, formula tank, and individual funnel and mix components of the device. This process took about 20 minutes to separate, wash and assemble, not including drying time (make sure that all the pieces are completely dry before reassemble to prevent wet pieces from collecting formal powder. Baby Brezza recommends cleaning the formula container and mixing pieces and the funnel by hand using hot water and gentle soap, but the water tank is dishwasher-safe. My Baby Brezza Formula Pro Advanced reviewOverall, Formula Pro is super easy to use. The convenience of just pressing a button and having a ready-to-go bottle was incredibly amazing, especially compared to alternative methods of making formula bottles. Again, since Calvin is adopted and breastfeeding is not an option, we made a lot of bottles at our house. After using keep it under the faucet and bottle warmer methods with my older son, I know how painful these can be, especially in the middle of the night. There's not much worse than waiting and waiting for a bottle to be hot when you've got a hungry, crying kid. In addition to the time, the prospect of measuring formula and trying not to waste in the middle of the night and having to turn on bright lights to do so is worth noting too. The awesomeSpeed. 30 seconds or less from start to start is damn fast, especially when compared to alternatives. Convenience. Again, compared to alternative methods, Formula Pro is easy and never makes any mess or wastewater. Design & aesthetics. Formula Pro Advanced is a nice machine and we didn't mind having on our kitchen table. But more importantly, I felt that the design was well thought out to make it easy to use, keep it clean, reduce the likelihood of wastage, and work well with bottles we already had. The 'wish it was different' Water tank size. At 50 ounces, the water tank needs refill after just 9 six-ounce or 6 eight-ounce bottles. This added a while to that '30 second or less' number and resulted in a few times when I forgot to fill it up and had to do it in the middle of the night. It is clear that the company was thinking about the size of the device here, and a larger tank would have meant more Space. Not very much details of inner working. I realize this won't apply to everyone, but I felt like 'how it works' behind Formula Pro was a bit lacking. I wanted to understand more about how the stuff actually created bottles where the mixture happened, etc., but it was missing

from the documentation that came with it, and maybe caused the problem where I didn't realize I needed to clean the underside of the formula space more often. A verdictI would struggle to say that Formula Pro Advanced is a must have - you can definitely make bottles of formula without it. But especially if you're a formal family and want to make a lot of bottles over a long period of time, it's just amazing and about as close as I've found to a must-have baby product. And at about \$199, it's reasonably priced for what it does, and if you're going to use it for a long time, or maybe across multiple kids, you can cut off that cost over a ton of bottles made. Formula Pro Advanced also ended up saving me an incredible amount of time, which as any parent knows, is something that is in short supply and worth a whole lot. For these reasons (and all the middle-of-the-night heartbreak stuff saved me, I highly recommend it. Based on our review, we've added Formula Pro Advanced to our highly selective baby must-haves list, which describes items we believe are at the top of the pile and can make life with your newborn a whole lot easier. Formula Pro Advanced FAQ Cleaning Of Formula Pro AdvancedFor cleaning Formula Pro Advanced, remove the funnel every 4 cleaning and wash it gently by hand with warm soapy water. Less frequently, clean the formula container and 3 mixing parts by hand, and monthly, clean the water tank, which is dishwasher-safe. Formula Pro Advanced Powder SettingsThe Baby Brezza Formula Pro Advanced uses powder settings to ensure formulas that have different sizes of powder grains to mix properly with heated water. Formula Pro Advanced works with about 20 major formula brands in the United States, you can find a complete list here. Baby Brezza Formula Pro vs AdvancedMed Formula Pro Advanced, Baby Brezza made a number of upgrades vs. the original Formula Pro: the number of pieces to be cleaned is reduced, the device is smaller, there is now a digital display to select settings and make bottles, and you can now make bottles in an ounce size range instead of only straight-numbered sizes vs. the original. How long does it take for Baby Brezza to warm up? Baby Brezza Formula Pro Advanced actually stores water heated to allow you to heat bottles faster. So the total time to make a bottle is less than 30 seconds (it varies based on bottle size). If your Formula Pro Advanced tank is empty and you need to add cold water, take a few more minutes so the water can warm up. Do you need boil water for Baby Brezza? Baby Brezza recommends that you use filtered water for Formula Pro Advanced-in addition to possible health reasons for this, filtered water can prevent buildup in the parts of your Formula Pro. Boiling is not likely to help with any of these if you live in a place that has safe drinking water as it's not going to eliminate the elements that make up 'hard' water or other things your city may have added like fluoride. Where to buyFormel Pro is available at Buy Buy Baby, Babies'r Us, big box stores like Target & Walmart, and for all you Prime members out there, available through Amazon with free, fast shipping. Formula Pro Advanced also comes in Silver and (because what doesn't these days) Rose GoldEditor's Notes: We are a participant in the AmazonAs Services LLC Associates Program, an affiliate advertising program designed to provide a means for us to earn fees by linking to Amazon.com and affiliated websites.
