Each bank and credit union receives a 9-digit routing number, also known as the American Bankers Association (ABA), or route transit number (RTN). This 9-digit ABA route number makes it easy for the control processing system to identify the bank where the check originated. The numbers, created in the early 1900s, came about when physical checks had to be returned to the branch's bank. After check 21, everything is digital, but the numbers are preserved. The ABA route numbers are still used to identify banks for other transfers, such as automated clearing house (ACH) deposits and account payments. The American Banker's Association is a partner of Accuity to manage the official route number registrar. They assign route numbers and manage the entire system - they publish a six-month American Bankers Association key for routing numbers. This key lists all útválasztást útválasztást Why do banks have so many route numbers? Occasionally, there are banks, especially the larger ones, that seem to have more than one route number. This usually happens when banks acquire or merge another bank. Many major banks have gotten this way through acquisitions, which is why there are so many ABA routing numbers. However, there is no problem with multiple ABA routing numbers, as each bank can allow up to five ABA RTNs. Some have more than five All numbers because they are merged with a number of different entities with multiple accounts. This can happen through status lines. What is the bank route number format? The numbers on the check that represent the bank route number are not actually random. They have a pattern or a format that follows. The 9 digits are arranged as follows - XXXXYYCY: XXXX - Federal Reserve Routing Symbol - refers to one of the 12 Federal Reserve Banks YYYY - ABA Institution Identifier C - Check Digit (used as a check amount for the whole number) XXXX - Federal Reserve Routing Symbol The numbers are quite simple.
