## Request header or cookie too large fix

nginx民래民류民400 Inappropriate RequestRequest header or Cookie Too Largerequest header 民民즈민 너민 커민기 default 실민래民 길. large\_client\_header\_buffers 4 8k; '즈민면 된.large\_client\_header\_buffers 4 16k;참민즈민 없민 이民民민면 400 bad queries 이民단된民. {title:nginx 설민 - Request header or cookie too large 민民,source: blogName:weirdlabs,blogId:timberx, logNo:220770329563,smartEditorVersion:2,meDisplay:true,lineDisplay:true,outsideDisplay:true,cafeDisplay:true,blogDisplay:true} I get 400 bad query query header or cookie too big from nginx with my Rails app. Restarting your browser resolves the problem. I just keep the line ID of my cookie, so it should be small. Where can I find nginx error logs? I looked at nano /opt/nginx/logs/error.log, but it has nothing in common. I tried to set the following and no luck: place / { large\_client\_header\_buffers 4 32k; proxy\_buffer\_size 32k; } nginx.conf #user no one; worker\_processes(1); #error\_log logs/error.log; #error\_log logs/error.log message; #error\_log logs/error.log information; #pid logs/nginx.pid; events { worker\_connections 1024; } http { passenger\_root /home/app/rvm/gems/ruby-1.9.3-p392/gems/passenger-3.0.19; passenger\_ruby /home/app/rvm/wrappers/ruby-1.9.3-p392/ruby; include mime.types; default\_type application/octet-stream; sendfile on; keepalive\_timeout 65; client\_max\_body\_size 20M; server { listen 80; server\_name localhost; root /home/app/myapp/current/public; passenger\_enabled on; #charset koi8-r; #access\_log logs/host.access.log main; location / { # large\_client\_header\_buffers 4 32k; # proxy\_buffer\_size 32k; # } # location / { # root html; # index index.html index.htm; # client\_max\_body\_size 4M; # client\_body\_buffer\_size 128k; # } #error\_page 404 /404.html; # redirect server error pages to the static page /50x.html # error\_page 500 502 503 504 /50x.html; location = /50x.html { root html; } # proxy the PHP scripts to Apache listening on 127.0.0.1:80 #location ~ /\.php\$ { # proxy\_pass ; # } # pass the PHP scripts to FastCGI server listening on 127.0.0.1:9000 #location ~ /\.php\$ { # root html; # fastcgi\_pass 127.0.0.1:9000; # fastcgi\_index index.php; # fastcgi\_param SCRIPT\_FILENAME /scripts\$fastcgi\_script\_name; # include fastcgi\_params; # deny access to .htaccess files, if apache document root # agrees with nginx one # #location ~ /\.ht { # denies all; # } } # another virtual computer using a combination of IP, name and port configuration ##server { # listen 8000; #listen somename:8080; # server\_name somename alias another.alias; # place / { # root html; # index index.html index.htm; # } # } #https server # #server { # listen 443; #server\_name localhost; #ssl on; #ssl\_certificate cert.pem; #ssl\_certificate\_key cert.key; #ssl\_session\_timeout 5m; #ssl\_protocols SSLv2 SSLv3 TLSv1; #ssl\_ciphers HIGH:!aNULL:!MD5; # ssl\_prefer\_server\_ciphers on; # location / { # root html; # index index.html index.htm; # } # } } Here's my code protecting cookies and cookies screenshot firewall. I firebug check stored session and I found new relic and jQuery is storing cookies too; is this an excess of the cookie? def current\_company return if current\_user.nil? session[:current\_company\_id] = current\_user.companies.first.id if session[:current\_company\_id].blank? @current\_company ||= End of company.find(session[:current\_company\_id]) Avoid support fraud. Learn more I have sites www.canadiantire.ca that worked up to the latest updates. Opens the home page, Select a search and enter any search term press Go/Enter and get 400 Bad Header, Request Header or Cookie Too Big Why Am I Getting This? Canadian Tire says that there the site is created by Google Chrome (which I am not in favour of transition to) I have websites www.canadiantire.ca that worked up to the latest updates. Opens the home page, Select a search and enter any search term press Go/Enter and get 400 Bad Header, Request Header or Cookie Too Big Why Am I Getting This? Canadian Tire says that there the site is created by Google Chrome (which I am not in favour of transition to) Hi Peter, or do you want to try to clear cookies Firefox saved this site, or does it help? Here's how: When you view a page on your site, click the lock icon on the left of the address bar. After a moment, the Clear Cookies and Website Data button should appear at the bottom. Go ahead and click on that. In the dialog that opens, you'll see one or more matches for your current address so that you can remove site cookies separately without affecting other websites. Then try searching again. Any improvement? Read this response in context © 0 Hi Peter, do you want to try to clear cookies Firefox saved this site, or does it help? Here's how: When you view a page on your site, click the lock icon on the left of the address bar. After a moment, the Clear Cookies and Website Data button should appear at the bottom. Go ahead and click on that. In the dialog that opens, you'll see one or more matches for your current address so that you can remove site cookies separately without affecting other websites. Then try searching again. Any improvement? Thanks. The removal of cookies worked. Can only make 1 at a time with your method. Quicker solution: Preferences/cookies and website data/manage data/search for all cookies related to the site; Remove selected clear cached web content while you're there) Thanks. The removal of cookies worked. Can only make 1 at a time with your method. Faster solution: Preferences/cookies and website data / manage data / search for all cookies related to Remove selected (helps clear cached web content while you're there) run some of your sites through Nginx HTTP servers and some of my Nginx configuration is configured for different environments.. So when I received this error message (400 Bad Query: Request header or cookie too high) while working with one of my servers, I quickly did some research and resolved it. If you find yourself in a similar situation, follow these steps to resolve it quickly. Oh, by the way, it may also be your browser sends a very large cookie and the server refuses to serve the page ... In addition to a browser sending a large cookie, this can also be a Nginx configuration problem and nginx buffer size adjustment to accommodate large cookies that could help ... If you don't want to clear or reset browser cookies, follow these steps to adjust the Nginx configuration to allow large cookies... When you see this error message, it means that the header or some headers sent by nginx are too large and well above the configuration limit, and Nginx rejects it.. To fix it, follow these steps: oh, just so you know, the default buffer number and size of Nginx is 4 and 8k.. If the header size exceeds the above limit, you will receive that error message.. Open the server configuration file on the Nginx HTTP server... sudo nano /etc/nginx/sites-available/example.com.conf Your server configuration file location may differ from above... When the file opens, add this configuration line and save... server { # ... large\_client\_header\_buffers 4 16k; # ... } Save file and exit Nginx states that the string is valid only in http or server contexts... so make sure to add a configuration string or context.. After that, restart or restart the Nginx server. sudo systemctl reload nginx.service test again and the error should be gone ... If you still receive an error after restarting, the number totals to 4 and 32k.. then restart the Nginx server... Another thing to look at is that if you use Nginx intermediate proxy\_set\_header with proxy\_set\_header config, you should just remove that line from your proxy configuration block... For example, remove the row below from the proxy configuration block if you configured it, and then save and restart Nginx... proxy\_set\_header host app.example.com; These steps above should you return to the running site... If all the above steps don't work, there might be other problems in the game... browser cookies and possibly reset your browser by deleting all data stored on it, let's hope they are Act.. Thanks, you may also be able to patti post below: How to install and configure ClickHouse on Ubuntu 16.04 | 18.04 18.04 18.04
