1 Take an inventory of the pieces that came with your Diaper Genius®. Read the instruction manual that comes with your Diaper Genius® to make sure you understand all parts of the package and how each one works. Before you start the assembly process, make sure that you have all the parts listed in the instruction manual. If something is missing, wait until you get the missing parts. If you find that you are missing parts, call the customer service line in the manual and request that the spare parts be shipped to you. 2 Place the top and bottom on the hinge. The first step in assembling your ® of Diapers is to join the top (piece A) and bottom (piece B) of the genius. There is a hinge at the bottom of part A and a bar at the top of part B. While holding down the top at a 45-degree angle, place the B-piece bar on the hinge and press down until they click together. There is no need to force the hinge in place. You just have to push it until you hear a click. 3 Flip the top and click in place. After securing the hinge between the top and bottom of your Diaper Genius®, flip the top over the bottom of the genius and press down until they click together. At this point, your genius should look like a tall, thin cylinder. 4 Prepare a coating refill for ® Diaper Genius pack. You will need to place the plastic coating on your genius in order to use it. To add a new recharge, pull the recharge tab to remove the plastic seal. Then pull down until you've thrown about 18 inches of film (or enough to fill the bottom of the Genius®). Tie a knot at the bottom of the liner. [1] A hand knot works best to secure the bottom of its lining. [2] 5 Place the coating on the genius. Finally, place your liner filler on top of your Diaper ® and push the knot you've tied down through the clamp. Close the lid of your Diaper Genius®. Now you're ready to start using it. [3] 1 Roll the Diapers into a tight ball. After changing your baby, roll up his Diaper well, securing it with the duct tape in the Diaper. It is best to roll the Diaper in an oblong shape or a small round package. [4] The tighter you can wrap your dirty Diapers, the longer the Diaper Genius will hold® before you have to empty it. Do not leave the adhesive tape unsecured because this can be attached to the lining of your genius, causing it to break. Generally, ® Diapers will have approximately 34 newborn Diapers at a time. This number will decrease as your child gets older. [5] 2 Dirty Diaper. Once you have rolled up your dirty Diaper, lift the Diaper Genius cover® and insert the Diaper. Push the dirty Diaper all the way through the clamp. Make sure the clamp closes again after you have inserted the Diaper. Once you've done this, close the lid. [6] Once the clamp closes, the ® rotates the film directly clamp, sealing the dirty Diaper on top. 3 Remove the top of the cube. Once your Diaper ® is full, light up the top from below by pressing the button in the center of the genius (where the top and bottom are located). Flip the top upwards, revealing the cutting mechanism built inside. [7] 4 Cut the liner on top. After unscrewing the top and revealing the child-proof cutter in genius, pull the coating into the cutting mechanism and press down until the coating is cut. Tie a knot at the top to lock the Diapers in the lining. Be sure to leave enough space on top of the Diaper roll to tie a knot, usually three or four inches. 5 Remove the complete coating. Once you've tied the top of your lining, lift the entire bag and discard the dirty Diapers wherever you dispose of your trash outside. 1 Tie a knot in the lining. Once you have removed the entire lining, be sure to tie a knot at the beginning of the new lining. If you don't, the dirty Diapers you place on the genius will fall on the bottom of the liner when you're going to remove the next full load. 2 Remove approximately 18 inches of coating. After tying a knot at the end of the lining you just cut, pull about 18 inches of lining, as you did when you were preparing to use your Diaper Genius® for the first time. Make sure that the amount you extract is sufficient to fill the bottom of the cube. [8] 3 Secure the top back at the bottom. Finally, flip the top of the Diaper Genius® back so that it is sitting at the bottom of the genius. Press down until the two parts snap back into place. [9] 4 Clean your Diaper ® weekly. As you can imagine, you'll have to clean your Diaper Genius® routinely to keep germs and any persistent smells of your child's dirty Diapers to a minimum. The best way to do this is to cleanse your genius at least once a week. To do this, disassemble the Diaper Genius ® and clean both inside and outside with a bleach-based solution. If you want to be more complete, clean it with an antibacterial wipe several times throughout the week. Also, each time you change the coating on ® Diaper box, spray the inside with a disinfectant spray and odor neutralizer. [10] 5 Invest in a deodorizing filter. The Diaper Genius ® tool doesn't come with a built-in deodorant, but investing in one is a good way to help reduce the daily smell of your child's dirty Diapers. You can find deodorizing carbon filters for your Diaper Genius® in almost all retailers in general, such as Walmart or Target. These filters come with a box that joins the lid of your Diaper Genius ® and several individual carbon filters. To use, simply unhook the top of the box, place a filter inside and adjust the closed box. Filters should be replaced at least every 90 days for best results. [11] Add new question The lid Deranged. Is there a trick to get it back without breaking it? Catherine Palomino is a former director of the Childcare Center in New York. He received his master's degree in Primary Education from CUNY Brooklyn College in 2010. While holding the top at a 45-degree angle, place the B-piece bar on the hinge and press down until they click together. If this cannot be done easily, then do not force it and instead contact the manufacturer for assistance. Question Do you take the batteries? Diaper Geniuses don't need or use batteries. It is a manual push that will propel the Diaper into the bag inside the machine. Question How do you know when it's full? It's full when you can't comfortably fit more Diapers into it. Question The clamps crumbled. How do I put it back together? There are two pieces on the clamp: the piece with the spring attached and the part with the cutter. Hold the two pieces so that the curved end of the part with the cutter and the side of the other part on which the spring is located point to each other. Hook the curved end of the part with the cutter under the spring on the other piece. Then flip the part with the spring down, hooking it onto the cutting part track. Once the parts are connected, hold them so that the cutting mechanism points to the ceiling and put them back in place inside your Diaper Genius ® Diaper system. Watch a video demo. Question Do Diapers come into their own bags? Yes, each Diaper, if put in the Diaper Genius separately, will be packed in its own small bag. Ask a question Thank you! Thank you! Thank you! Thank you! Thank you! Diaper Genius® Diaper Diaper Genius Diaper® dirty linings/used disposable Diapers This article co-authored by Catherine Palomino, MS. It gave a good insight into how the product works. Share your story 1 Open the Diaper Genius. Make sure your Diaper Genius rests directly on the floor. Press the button on the front of your Diaper Genius to separate the Diaper top from the bottom (you can let the top rest on the ground. You won't need it for a while.) [1] If any Diapers remain at the top of the Diaper Genius, push them down at the bottom of the Diaper Genius. Be careful to go slowly when opening your Diaper Genius. You don't want to make a mess! 2 Cut your bag. Diapers must be consolidated at this point in the Diaper Genius and contained in a bag. Grab the bag a few centimeters above where the Diapers are stored and give the bag a small shake; this one further consolidates Diapers. In the middle of your Diaper Genius you'll find the cutter. Use this to cut the bag into two halves. [2] Try to cut the bag about six inches above where the Diapers hide. The cutter is located in the center of the top of the Diaper Genius. You should be able to detect easily, as long as your Diaper Genius is open. 3 Dispose of your bag. Lift the Diaper Genius whole bag and give it one more smoothie to consolidate Diapers. Close the bag by tying a double knot. Dirty Diapers are now ready to be discarded in any available trash. [3] Be sure to tie your tightest knot. Otherwise, you run the risk of leaks and odors. Keep your foot on the pedal to prevent your Diaper Genius from overturning. [4] 4 Recharge your Diaper Genius. Take the bag that's still attached to your Diaper Genius. Tie a knot at the bottom. Pull the bag to create some slack on top of your Diaper Genius and place the bag on the bottom of your Diaper Genius. Close the lid of your Diaper Genius. [5] Consider putting a small deodorant on the bottom of the bucket if you want to avoid odors. You'll know that the Diaper Genius has successfully closed when you hear the top close. You should remove about 18 inches (46 cm) of bag to prepare for the next use. 1 Check the indicator. You will know that your Diaper Genius is ready for a bag reload because the reload film will say almost empty and needs to be replaced. Diaper Genius refill cartridges are available for purchase online and in stores. A pack of three Diaper Genius Diaper Genius cartridges costs about \$15 on Amazon. Each pack consists of 270 bags per cartridge. Check eBay or sales in your area to see if you can buy top-ups near home. 2 Remove the plastic seal. Hold the Diaper Genius cartridge in one hand and use the other to rip the plastic seal on top. Remove the bag from the top of the cartridge, then pull it through the center of the cartridge. Tie a tight knot at the bottom of the bag. You will have to pull about 46 cm of bag to prepare for the next use. If you don't remember to take out enough bag for the next use, don't worry. Just be aware that you'll be able to put fewer Diapers in your bag than you're used to. 3 Complete the recharge. Open the Diaper Genius cover and remove the old cartridge. Replace it with the new cartridge and thread the bag through the clamp so that the knot hangs on the bottom of the Diaper Genius. Put the lid back on your Diaper Genius; you'll know that the lid has been secured correctly when you hear a click. The clamp is located in the center of the top of the Diaper Genius and is used to fix the bag in place. After securing the clamp, check that you have tied the bag. There's nothing worse than realizing you forgot to close the bag, after the Diapers are already in the bucket. 1 Open your Diaper Genius. Depending on whether you have the Diaper Genius or the Elite Diaper Genius, you will do so in one of two ways. To open the Diaper Genius, lift the lid from the top. To open the Elite, use your foot to press the pedal at the bottom of the Diaper Genius. [6] If you smell a smell coming from your Diaper Genius, without the Diaper Genius opening up, it's time for a clean out. Try to clean your Diaper Genius every time you change the bag. Wash your Diaper Genius with soapy water. Clean it with a bleach-based cleaner and then let it dry in the sun. [7] 2 Discard the Diaper. Push the Diaper through the Diaper Genius clamp until it disappears from view. You will want to make sure that the clamp closes completely; otherwise you run the risk of odors and leaks. To adjust the maximum number of Diapers inside your Diaper Genius, roll up your Diapers well. To prevent the contents of the Diaper from spilling during transit, secure the Diaper with the Diaper's adhesive eyelashes. 3 Close the Diaper Genius. If you have the Diaper Genius Elite, remove your foot from the pedal to close the can. If you have the original Diaper Genius, close the cover manually. If you can't close the Diaper Genius, this means it's too full and it's time to refill the cartridge. If your Diaper Genius isn't full and isn't closing yet, there may be a Diaper obstruction you can't see. Make sure the Diaper pieces aren't stuck in the Diaper Genius cover. [8] If you still cannot close the Diaper Genius cap, the spring mechanism may have failed. Call Playtex Customer Service to report your issue. Add new question question The cutter on my Elite broke. Can I buy a replacement? Yes. Contact Playtex Customer Service, which have spare parts. Ask a question Diaper Genius Diaper Genius Replacement Cartridge Thank you! Thank you!
