If you are looking to strippe the top receiver you can customize yourself by selecting, then install yourself. While the dismantling of the hole is a little tight, he is still out aluminum and compatible with most mil-spec 5.56 AR-15 reduces. Watch at Brownells Best High End Pick: Wilson Fight AR-15 Billett Top Receiver Wilson Fight AR-15 Billett Top Receiver Receiver to be used accurately to maximize accuracy potential. Built from a class 7075-T6 aluminum aircraft and coated in anodized finish, this top receiver was designed by WC from scratch to address perceived deficiencies in the structural design of the AR-15. It is also equipped with precise bolt race track, shell deflector, and M4-style feed ramps to ensure solid reliability. Look at brownells Best Value Pick: WMD Guns AR-15/M16 NiB-X Coverage Upper WMD receiver built from aluminum class aircraft and comes coated in a NiB-X finish that is more durable than chrome coating and has been designed to withstand 30,000 rounds. If you want a top receiver that you know can last you for a long time, and that won't break your bank, it's a solid choice to go with. Built of 7075 aluminum, covered with an asodized finish of a mil-special class and compatible with several different calibers, this receiver is ready to come straight out of the box. Look at the Brownells Most Popular Centerfire Rifle in the United States today ar-15, and it's been for a few years. But do you want to know where the AR-15 originally started? It originally started with the M16A1 rifle. The AR-15 platform, as we know it today, with all its various options and spare parts and accessories available on the market, can be associated with the M16A1 since the late 1950s. If you want to build together your personal M16A1, the two most important components you need are the lower receiver and the top receiver. We'll talk about the latter today. In this guide, we will dive into the history and review of the M16A1 rifle, the goal behind the top receiver and the best quality to look for in one, and then our pick for the top three top receivers for the M16A1 in today's market. A review of the M16A1 AR-15 rifle, as we know it today, can be traced all the way to the M16A1 from the late 1950s. The standard rifle production for the United States armed forces during World War II was the M1 Garand rifle, which was an excellent rifle that was more technologically advanced bolt-action rifle services of other countries during the war. However, by the 1950s, the M1 was also showing its age as rifles with removable magazine boxes such as the AK-47, FN FAL, and HK G3 began to equip other military personnel in the world. The U.S. military responded by changing the M1 Garand to shoot the .308 Winchester round, adding a removable box log, and cutting the gas tube. The result was the M14 rifle, or M1A as its own in its semi-automatic configuration only for civilians, was perhaps a solid improvement over the M1 Garand, he also had his own Specifically, it was just too big and heavy, and the hefty .308 round he shot was just too big and heavy for the Vietnam War jungle. That the military needed a smaller and lighter rifle, which was more maneuverable and that fired an intermediate cartridge so that the soldier could carry more ammunition for less weight. The result was the M16A1, or the first major iteration of the AR-15 rifle (which in turn was developed from the AR-10). When the AR platform was originally designed by Eugene Stoner, he knew little that it would eventually become one of the most successful rifles of all time. Today, after all, the AR-15 is a best-selling rifle sold in the United States and is in the service of countless military, law enforcement and special forces around the world. The M16A1 is markedly different visually from other M16 rifles for its triangular manual guard, a stock that has no compartment, and a 20-inch barrel and rifle-length gas system. Initially it lacked forward help and fitted with a three-pronged flash suppressor, along with a parkered finish that was very resistant to rust and corrosion. Parkerizing came standard as finish on most American military weapons, including the M1 Garand and the Colt M1911A1 pistol, for this very reason. The M16A1 was later developed in the XM16E1, which added forward help and cutouts to the bolt carrier and was produced from 1967 to 1982. Several other improvements have been made in the M16A1 as well. For example, three flash-chemistry prongs are initially present on it caught on branches frequently, so the XM16E1 added an improved hide and seek that mitigated the problem. The M16A1 eventually paved the way for more M16 generations (such as the M16A2 and the current M16A4) and its short cousin 16-inch barrel or shorter M4 carbine (the 16-inch version is the most common AR configuration with American civilians today). Although the M16A1 is no longer in service with the U.S. military, it is still used by numerous other military personnel around the world, as the U.S. government sold most of its existing M16A1 stockpile to other governments when new versions of the rifle were developed. In fact, it really was the M16A1 that started it all when it came to the AR-15 platform. This is also why the M16A1 has seen a resurgence in the AMERICAN market over the past few years as companies such as the Brownells have sought to release their own versions of the M16A1 to appeal to buyers who are interested in rifle with a much more classic look. If you want to assemble your own M16A1, one of the most important components you will need to consider is the top receiver. Simply put, without the quality of the top receiver, you won't have a quality rifle. In the following we'll talk about why you should upgrade the top receiver and then we'll discuss the best features to watch the look In one. Why should you upgrade the top receiver? The top receiver is just the top of the AR-15. It includes a metal hull, a barrel, manual security, a catapult port, a forward fast forward, a rail system, a bolt carrier group, and so on. When you combine a full top AR-15 with a full lower receiver, you create a fully functional rifle that is ready to go. And while both components are vital, the top receiver is probably the most important because it is the part that affects the performance of your rifle's firing the most. That's why while there are many reasons to consider upgrading the top receiver, but the biggest reason in the first place is to improve the performance of the rifle. For example, when you assemble a rifle with a higher quality top components, you can potentially increase the performance of the rifle by up to 50%. In addition, the creation of the M16A1 with higher class components such as the 7075 aluminum class aircraft will greatly help improve its durability as well. Buyer's Guide to the Best M16A1 Top Receivers This is the most important factors to consider when searching for a new top receiver for your M16A1: Full vs. stripped when selecting any top receiver, you should always choose between going with a stripped top or full top. It shouldn't be hard to choose which one you should go with depending on your intentions for the rifle. Deprived of the top receiver is any top receiver that is not complete, meaning that there are additional components that you will need to purchase and install yourself on the rifle. The specific components that you need to get will vary depending on the top that you are considering, and it is your responsibility to make sure that you learn what specific parts you need to get. The full top, on the other hand, comes with all parts already installed, so that it is immediately ready to merge with the lower receiver (provided that the bottom is completed a) in order to form a full rifle. Since the full top receiver comes with everything installed already, it will be more money out of the box, but keep in mind you also have to spend the cash on the components you need in order to turn it into a full top. Speaking of parts, we also have a guide for you covering the best M16A1 assembly kits. In short, you have to go with the competition top if you don't want to deal with any hassle or parts setup, but you have to go with a stripped top if you want to customize your rifle to make it truly your own. Rail Your top receiver should come with a rail on top to make it easy to add lights, lasers, sights, point attractions, or other accessories. The best kind of rail get will be the M1913 style Picatinny Rail, as it will be compatible with the most spare parts and components. Forward Help and The dust cover is designed to keep dirt out of the ejection port when the rifle is not in use, while forward help can help clear the jam in case the round doesn't go all the way home. While neither advanced help or dust cover is truly necessary to ensure proper function, both pieces are good to have, and ideally your top receiver will come with them. In case you go with a stripped top that doesn't come with these components, you'll make sure it at least gives you the ability to add them. The durability of the best upper receivers is built from a class aircraft 7075-T6 aluminum, which is both lightweight and very durable. This is a much better choice than either a polymer or 6061 aluminum, both of which are durable in themselves, but not as much as 7075 aluminum. Also make sure your top comes with a sturdy rust and wear-resistant finish as well, such as nitride or anodized finish. This ensures that your top will keep better in difficult conditions or inclement weather. 4 Best M16A1 Top Receivers for 2020 Now that we've considered why you need to upgrade the top receiver and the best quality to look for in one, here's our pick for the top four M16A1 top receivers for 2020: WMD Guns AR-15/M16 NiB-X Coverage Upper WMD Receiver is a company that is known for its high quality finishes and coatings on firearms. This top is no exception, coming with a NiB-X coating that is more durable than a chrome coating and is designed to easily withstand 30,000 rounds. Specifically, niB-X includes a nickel boron with a strength greater than Melonite or Tennifer as well. The hull of this receiver is built from a class aircraft 7075-T6 aluminum, and is available in black, nickel, OD green, or flat dark earth color paintings. Extended M4 feed ramps provide reliable power, but dismantling the hole is also very tight and may require further installation from the gunsmith. Overall the WMD Guns NiB-X Coverage Upper Receiver comes with a finish that is more durable than the Chrome coating, and is also built from an aluminum class aircraft. If you want a top for your M16A1 that you know is built to last, this is a solid option. Look at Brownells More durable than chrome coating Built from 7075-T6 Aluminum Comes with extended M4 feed ramps Since this stripped receiver, you will need to add additional parts yourself or using the Aero Precision Stripped Top Receiver available for affordable price, this Aero Precision is a section of the top receiver that is compatible with most mil-spec class AR-15. It comes with quality M4 feed ramps to ensure consistent reliability and is built from high quality class aircraft aluminum with a hard coast grade 2 anodized finish for good resistance against rust and wear. In addition to black, you can Get Aero Precision in cerakote FDE or cerakote OD green. Although it is designed to be compatible with most mil-special AR below, the drill holes can be a bit stiff depending on the bottom you are going to match it, and it may require the help of a gunsmith. But if you're looking for a solidly built M16A1 top at a good price. Overall, aero Precision Stripped Top Receiver is a solid choice if you are looking for a stripped top receiver that is ready for you to customize. Aero Precision has designed this top receiver to be compatible with most mile-special 5.56 below, which means it will be a great option for your M16A1 built. Just note that the dismantling of the hole is a bit tight and may need more installation from you or the gunsmith. Look at brownells Features M4 Feed Ramps Built from durable 7075-T6 Aluminum Compatible with most mil-spec AR-15 downgrades comes with M4 feed ramps Takedown holes a little tight You need to buy additional components of the self-assembled Sharps Bros Collected AR-15 Top Receiver Sharps Bros Collected AR-15 Top Receiver is a full top receiver that came straight out of the box. It is compatible with several different AR-15 calibers, including the .224 Valkyrie, 6.5 Grendel, .300 Blackout, .223 Remington and 5.56x45mm NATO receiver. However, due to the size of the ejection port, it cannot accommodate rounds such as the .458 SOCOM or the .450 Bushmaster. This top part is built of aluminum 7075 and is covered with a mil-spec anodized finish, so it is very durable and rust resistant. It is also equipped with forward help and dust cover. All you have to do is add manual security and barrel and it's ready to go. Overall, Sharps Bros. is a solid choice for a full top receiver for your M16A1. Compatible with several different cartridges and built from high quality materials, this is the kind of receiver that you can use forever and pass on to the next generation. Looking at Brownells Compatible with several different AR-15 cartridges Comes full and ready to install right out of the box Built from a 7075-T6 aluminum coated in a cute-special anodized finish can't be easily customized since it's already assembled Wilson Fighting AR-15 Billet Wilson Fighting AR-15 Billet Top Receiver was built WC for accurate use, to ensure maximum use. Wilson Struggle also built this top receiver from scratch to address perceived structural design flaws from Wilson's structural wrestling receiver. WC argues that this approach helps both improve durability and tolerances. Wilson Fight built this top receiver out of a 7075 aluminum class aircraft along with a coating of mil-special class black anodized finishes to ensure solid rust and Sustainability. It also features M4-style feed ramps to provide good good Not a big enough bolt raceway to improve feeding and coming, Picatinny rail so you can add sights and optics, and the shell deflector. One negative about this receiver, apart from his score, is that he won't take all the aftermarket bolt releases, so stay on the safe side you should invest in Wilson's fight bolt releases instead. Overall, Wilson fighting the AR-15 Billet Top Receiver is a solid top receiver for the M16A1. Built of 7075 aluminum and designed for precise use for maximum precision potential, this is a top that can last a lifetime. Look at brownells Built for precision use for maximum precision potential supplied by the coating in the mil-special class anodized finish Built from the aircraft class 7075-T6 Aluminum has a Picatinny top rail to add sights and accessories M4-style feed ramps to ensure good reliability Very expensive is not compatible with all aftermarket bolt releases Up Wrap And that concludes our list of the top four receivers for M16A1. Today there are simply more parts available for the AR-15 in general than ever before. While this means that you have many different accessory options, it also means that it may be harder to choose one, and the top receiver is no exception. Fortunately, any of the top four receivers that we reviewed here today would be a great option for your M16A1 build. Also remember that you can always contact our buyer's guide at any time when looking for a new top receiver as well. Featured images u/DaddyDano u/DaddyDano
