Slime tyre sealant instructions

© 1996-2015, Amazon.com, Inc. or its affiliates © 1996-2014, Amazon.com, Inc. or its branches September 11, 2020 No more apartments! Slime Tube Sealant looks for and instantly seals punctures in pipes up to 1/8 (3 mm). When a puncture occurs, our patented sealant is carried directly to the puncture. The pressure of the runaways forces the particles into the hole where they are built and intertwined to form a long, flexible fork. Instantly, the loss of air is blocked and the flat wheel is prevented. Set in bikes, dirt bikes, wheelbarrows, mower riding and more, and enjoy two years of continuous protection from flat tires. Back to all articles Tire Sealant Tire Repair Tools and Accessories Sealants Self-Sealing Pipe Tools and Accessories Sealants Tools and Accessories Spend \$10 and 15 minutes in the garage and save hours of repair and fixing apartments. The Sealant Slime Tire is the savior. RATING: Exceptional MSRP: \$10 BEST FOR: Everything! Spend \$10 and 15 minutes in the garage and save hours of repair and fixing apartments. PROS: Fast and easy to repair and prevents apartments and punctureWidely available flat pain tires. Not only are they frustrating for children and parents, they are often on the side of the bike for weeks. Fortunately, preventing apartments is as simple as spending \$8 at Walmart (or \$10 on Amazon) and 15 minutes in the garage. Tire sealants are essentially fiber-filled mucus, which covers the inside of the bike tube quickly and efficiently repair and prevents apartments. In most cases, Slime only needs to be added to the tire once and prevents the apartment from essentially having a bus or tube life. In the four years that we have been using Slime in our child's bicycle tires, we have experienced only one apartment after our son drove through a field of prickly sheals. Honestly, with all the cycling that gets done here, I can't imagine life without tire seale! The most widely available brand is Slime and is sold at Walmart, Target, most auto parts stores and Amazon. You only need about 2 ounces of mucus per 12 tires, so the 8 ounce bottles sold in the bike section are enough for two bikes. If you have a few bikes to seal, consider heading to the automotive department, where Slime is usually cheaper per ounce. In order to add slime you will need to remove all the air from the tire, so be sure to have a bike pump nearby before you start. Step one: Remove the core valve of the inner valve of the stem valve tire must first be removed before you can add any mucus. While it sounds intimidating, it's actually quite easy to remove using the included Step two: Apply tire sealant After the valve is out, it's time to add Slime. You will need to add about 2 ounces to 12 tires (1/4 cup) and about 2.5 ounces for 16. For large tires the chart is given on the back of the slime container and a calculator is available on their website. Step three: Re-insert the valve and re-inflate the tire Once the mucus is in place, use the tool to re-insert the core. Next, inflate the tire to properly PSI (listed on the side wall of the tire) and then spin the wheel to allow slime to evenly spread throughout the tire. Step four: Repeat and ride Repeat steps with the second tire and then you are ready to drive. Slime does not require any waiting period, which allows you to use the bike immediately.
