Line output converter hook up. Hook up hang out reviews. Pull the hook up. Maybe sometimes we can hook up to hang out just to chill. Hook up and take out the difference. Hang out vs hook up. OVERVIEW Scosche's LOC80 line output converter allows you to connect the receiver without a preamp output amplifier without a speaker-level input. The LOC80 processes a speaker-level signal up to 80 watts of RMS in each channel and converts it to a line-level signal that you can connect to the amp.s input. Scosche's LOC80 line output converter allows you to connect the receiver without a preamp output amplifier without speaker-level inputs. The LOC80 processes a speaker-level signal up to 80 watts of RMS in each channel and converts it to a line-level signal that you can connect to the amp.s input. The LOC80 reduces incoming speaker-level signals to use the stereo RCA patch cable (not included) to connect to the ampal. The converter features adjustable to get settings on each channel and is compatible with almost any Stereo. Warranty: 90 days. READ LESS MFR #LOC80 #LOC80 The Scosche LOC-80 is a passive device that allows most car stereos connected to the amplifier or EQ amplifier to transform the car's stereo high-level speaker output into a low-level preampe signal (RCA socket). Installation: You can use the Scosche LOC-80 whenever you want to connect the amplifier or EQ amplifier to the car stereo that is not equipped with RCA (low level) exits. By simply connecting loc-80 speaker inputs to the car's stereo speaker output, you can now connect an amplifier or EQ amplifier to the vehicle's audio system. Speaker Inputs: Added speaker-level input wires are 4-3/4 long. Connect the car stereo system to the left (+) with the LOC-80 white wire and connect the left (-) speaker cable to the loc-80 white/black wire. Then connect the right (+) speaker wire to the loc-80 grey wire and connect the right (-) speaker wire to the loc-80 grey/black wire. RCA output: Connect the LOC-80 RCA output socket to your amplifier or EQ amplifier's RCA input (Red = Right, White = Left). Note: Check all connections and check the sound system again. The wiring colors of the LOC-80 may differ from the wiring colors found in your car's stereo. Output Level Adjustment: Scosche Car Stereo Speaker Level Converter is equipped with output level control that can be adjusted to properly sound level alignment. This is done by inserting a small flat blade or phillips head screwdriver to get adjustment holes located above the LOC-80. turning clockwise increases the benefit to this single channel or the amount of sound allowed to pass through loc-80. Turning counterclockwise reduces the growth of these individual channels. If you feel that after increasing the volume of your stereo, the sound is too quiet, then equally increase both left and right gains loc-80 until the sound level is sufficient. If the sound level is too loud with only a slight increase in stereo volume or deformation (poor sound quality) is noticeable, then equally reduce the loc-80 benefits. Q&A;B SHOW MORESHOW FEWER ARTICLES OVERVIEW Of Scosche's LOC90 line output converter converts high-level speaker wire signals into a set of line-level RCA output. If the car radio does not preamp the output, this 2 channel converter allows timely speaker wires to send up to 4 volt signals to preamp input into your 2 channel or mono amp. Scosche's LOC90 line output converter converts high-level speaker wire signals to line-level RCA output kit. If the car radio does not preamp the output, this 2 channel converter allows timely speaker wires to send up to 4 volt signals to preamp input into your 2 channel or mono amp. The converter will turn on your amp when it senses the incoming signal, so there is no need to turn on the wire. install the subwoofer, the loudspeaker, the includes a wired remote control for the adjustment of the bass level from the front seat. READ LESS line output converter with remote-level controlconverts speaker wire output RCA outputallows to add 2-channel or mono amples to factory and after-sales stereosworks with powerful car stereoseries (up to 50 watts per channel) includes mountable remote control, to control subwoofer level from dashwarranty: 90 daysOur 60 day money back guaranteeMFR #LOC90 Line Output Converter: Scosche LOC90 Line Output Converter converts speaker wire (high level) to RCA output (low level) to add after-sales dual channel or mono amplifier to an existing factory or after-sales stereo system that has no low level output. The LOC90 features up to 4 volts output and works with heavy duty car stereo up to 50 Watts (RMS) per channel. Wired remote control: The LOC90 also includes a convenient remote-mounted volume control to accurately control the volume level of the subwoofer from the front of the vehicle. The wired remote control is equipped with a connected 17' cable, which is interrupted at right angles by a 3.5 mm male connector connected to the LOC90 mini jack (3.5 mm) remote input. The wired remote control is designed to be installed under a dash using the supplied 3M tape or two self-threaded screws. Connections: Loc90 features four speaker-level input wires and stereo line-level outputs. There is also a +12V power cord, ground wire, and power lead. Speaker inputs: Connect the car stereoocurrent to the left (+) speaker wire to the LOC-90 white wire and connect the left (-) speaker wire to the LOC-90 white/black wire. Then connect the right (+) speaker wire to the loc-90 grey wire and connect the right (-) speaker wire to the loc-90 grey/black wire. RCA output: Connect the LOC-90 RCA output socket to your amplifier or EQ amplifier's RCA input (Red = Right, White = Left). Power/ground: The +12V power cord (yellow) must be connected to the permanent battery energy of your vehicle, while the grounding wire (black) must be connected to the vehicle's metal surface. Lead on: Lead (blue/white) after-sales amplifier on. Output level adjustment: The LOC90 line output converter is equipped with output level control that can be adjusted for proper sound level alignment. This is done by inserting a small flat blade or phillips head screwdriver into getting adjustment holes located above the LOC-90. turning clockwise increases the benefit of this single channel or the amount of sound allowed to pass through loc-90. Turning counterclockwise reduces the growth of these individual channels. If you feel that after increasing the volume of your stereo, the sound is too quiet, then equally increase both left and right LOC-90 until the sound level is sufficient. Sufficient: the sound level is too loud with only a slight increase in stereo volume or distortion (poor sound quality) is observed, then equally reduce the loc-90 benefits. Dimensions: Line Output Converter: 2.1875 (w) x 1.125 (h) x 3.5625(d) Wired Remote Control: 1.9375 (w) x 0.875 (h) x 2.875(d) Q&A;A; A SHOW MORESHOW LESS ARTICLES ARTICLES
