In this.... The username will take the form of the email address that was . All user name and password credentials selected by a Workplace user are unique for. . Url/ Host: Login: utarnyaho.com. Password: rjtheKing. PC: OOOO-PC. Date: 2011-05-11 15:09:15 Ip: 180.183.139.121. Thank you for your interest in our services. We are a nonprofit group that manages this site to share documents. We need your help maintaining this website. To keep our site running, we need your help to cover our server costs (about \$400/m), a small donation will help us a lot. Please help us share our services with your friends. The exploit database is offensive security, information security training company that provides various information security certificates, and high-end information security testing services. The exploit database is a non-profit project that is provided as a public service by offensive security. The exploit database is a HV-compliant archive of the exploits of the public and relevant vulnerable software developed for use by intrusion testers and vulnerability researchers. Our goal is to serve the most comprehensive collection of exploits collected through direct submissions, mailing lists, and other public sources, and to present them in a freely accessible and easy-to-navigate database. The exploit database is a repository for exploits and docs of concepts, not advice, making it a valuable resource for those who need data that can be used immediately. The Google Hacking Database (GHDB) is a categorized index of internet search engine requests designed to reveal interesting and usually sensitive information publicly available on the Internet. In most cases, this information was never intended to be made public, but due to a number of factors this information is linked in a web document crawled by a search engine, which subsequently follows this link and indexes sensitive information. The process known as Google Hacking was popularized in 2000 by Johnny Long, a professional hacker who began cataloging these queries into a database known as the Google Hacking Database. His initial efforts were amplified by countless hours of community efforts documented in the google hacking book Penetration Testers and promoted by a barrage of media attention and Johnny's conversations on the subject like this early speech recorded at DEFCON 13. Johnny climbed the term Googledork to invoke a silly or relentless face, as revealed by Google. This was intended to draw attention to the fact that this is not a Google problem, but rather as a result of frequent inadvertent intervention by a user or a program installed by the user. Over time, the term idiot becomes abbreviated for a search query that finds confidential information and dummies are included in web application vulnerabilities versions to display examples of vulnerable websites. After almost a decade of hard community work, Johnny handed GHDB over to offensive security in November 2010 and is now being maintained as an extension of the Exploit database. Today, GHDB includes searches for other online search engines like Bing and other online repositories like GitHub, producing different but equally valuable results. The exploit database is supported by Offensive Security, an information security training company that provides various information security certificates as well as high-level intrusion testing services. The exploit database is a non-profit project that is provided as a public service by offensive security. The exploit database is compatible with HV, the public feats of software developed for use by penetration testers and vulnerability researchers. Our goal is to serve the most comprehensive collection of exploits collected through direct submissions, mailing lists, and other public sources, and to present them in a freely accessible and easy-to-navigate database. The exploit database is a repository for exploits and docs of concepts, not advice, making it a valuable resource for those who need data that can be used immediately. The Google Hacking Database (GHDB) is a categorized index of internet search engine requests designed to reveal interesting and usually sensitive information publicly available on the Internet.
