## Using commas powerpoint

PowerPoint is a leading presentation software program. However, the software can be expensive, and it's not the most distinctive on the market. We've looked at several PowerPoint alternatives that are more cost-effective, easier to use, or include tools for generating more modern deals to determine the top six best competitive options. Top 6 PowerPoint Alternatives to Small Business Owners How We Evaluated Alternatives to PowerPoint Above All Should Allow Good Alternatives to PowerPoint Businesses to Make Effective Deals With an Easy Set of Tools to Create, Edit, and Share Slides. Alternatives should be more affordable than PowerPoint, offering unique features, or both. Apps should also give users control over what the slideshow looks like and behaves in terms of transitions and animations. The criteria we used to evaluate PowerPoint alternatives include: Cost – The overall price of the platform should be affordable for most businesses. Ease of Use – Presentation programs should be easy to use and understand. Editing Tools – The alternative should allow users to add custom text, footage, or colors to their presentations. Templates – PowerPoint alternatives should provide ready-made templates for users who don't want to build presentations from scratch. Audience interactivity – We looked at platforms that promoted audience feedback or allowed presenters to address questions or host polls during presentations. Presenter Tools – We compare notes, pointers, and narration options that help deals be more effective. Based on the criteria above, we find google Slides to be the best choice for most small businesses looking for a PowerPoint alternative. It's free to use and has all the tools you need to do powerful business offerings. It even lets your audience ask questions and provide notes and a virtual laser pointer for providers. Best Overall PowerPoint Alternative for Small Businesses: Google Slides Google Slides is part of the company's range of business productivity and collaboration software, which also includes Docs, Sheets, and Forms. Google Slides is easy to use, with a robust set of tools to make your presentations create as you see fit. Best of all, it's free with personal Google accounts or comes bundled with the paid G Suite service. Therefore, Google Slides is our best overall choice for small business PowerPoint alternatives thanks to its collaboration and customization tools. Google Slides pricing Google Slides comes free with any personal Google Account, and also comes with the G Suite business email account platform, which costs \$5 to \$10 per user per month. All the apps we compare has a free version, but only Slides offers all of its features regardless of plan selected. Pricing plans include: Personal Google Accounts: Free with 15GB of Storage G Suite Basic: \$5 per per Per month with 30GB of storage G Suite Business: \$10 per user per month with unlimited storage, activity reporting, and retention policy Additional 100GB of storage available for \$1.99 per month. Google Slides features google Slides allows you to create and host slideshows quickly and easily with plenty of templates to choose from. You can even import PPT files, so you can work on existing PowerPoint files if necessary. It also allows real-time collaboration, making it ideal for teams working together on important deals. Editing tools Google Slides' interface will likely remind you of PowerPoint, and come up with a basic set of tools for creating slides, formatting text, and inserting animations into slides. Like PowerPoint, you can convert data from your Excel and Google Sheets spreadsheets into graphs, and also insert image and videos of just about any mainstream file type. However, Google Slides doesn't offer the flashy animations offered by Prezi or Slidebean's automated slideshow creation, but has the same basic options like fading transitions and fly-in animations. The editing tools are also basic, but good enough to create a slideshow that looks professionally and aesthetically pleasing, while matching the needs of teams of any size in search of low-cost alternatives to PowerPoint. Templates Google Slides are used by all types of users, and as such, you can create your own slides from scratch or choose from 26 templates. You can use it for business use and just edit it as you see fit. You can also use third-party website designs like SlidesCarnival, which offers hundreds of free templates with striking designs. The template selection is small, especially when compared to PowerPoint, which has over 100 designs to choose from. Canva also has a wide range of templates at over 50,000. Still, Google Slides is good for any team that's either comfortable with a small set of basic templates, or doesn't mind searching for third-party templates. Presenter Tools slides have apps for iOS and Android devices, which allow you to use your phone as a remote to control presentations when your computer is connected to the TV or projector. You can't do this in PowerPoint without getting a third-party app. It also provides presenter tools like private notes, a pointer that lets you highlight on-screen items, and a basic Q&A; A tool that allows your audience to go to a URL on their device and asks questions to providers. This is a fairly robust set of provider tools compared to other alternatives. Canva offers presenter notes, but no pointer or Q&A; A option. Unfortunately, Google Slides lacks audience behavior analysis features found in more robust alternative plans, and the ability to view polls and surveys in Swipe. However, it's still a good free option for any team that interactivity with their and to save notes about their presentations. Collaboration features Like all of Google's business apps, team members can be signed in to the same Slides presentation, make modifications, and comment on slides. You can set permissions about who can view, comment, or edit your content. However, collaboration extends past the slide cover, as teams can then collaborate on connected Google Sheets or other embedded documents. This is a good option for teams that work together and want to update presentation data in real-time. Google Slide hosting templates that Google Slides google Slides lacks offer plenty of features to create respectable deals. With that said, your presentation will be very similar to the PowerPoint slideshows people have been seeing for decades. If you want something a little more noticeable, Prezi uses a whiteboard-based design that delivers content with dramatic zoom and rotations. What users think about Google Slides Users is very impressed with how useful Google Slides is, especially for a free tool. Collaboration features are particularly loved by remote teams, and most customers find the platform incredibly easy to use. There are complaints about some features being broken when Google updates to the platform, but those customers also noted that the company is quick to resolve the issues. We use Google Slides and prefer it above PowerPoint to create our deals. We find the user interface very easy to use and intuitive. This ultimately helps create deals much faster. Starting at \$24 per user per month, Slidebean will automatically create and format a presentation for you once you've entered your text and images. The advanced version even provides analysis. The quality of these slideshows is high, and they provide an aesthetically pleasing look. It's our choice for businesses that want automatic help for creating distinguished and visually arresting deals. You can start building Slidebean deals for free, but you'll have to pay to share your deals with others. Plans cost either \$96 per year for the Starter edition or \$228 per year for the Premium version. Slidebean is expensive and the only platform we've looked at doesn't offer a free expense. Slidebean Functions Starter The Starter edition gives you access to a core set of slide building tools. You can collaborate on projects with your teammates, host your content online and access the company's library of basic, peer-to-peer generated templates. PowerPoint does not provide such community-made content. Then simply add your text and images and have Slidebean apply it to the presentation layout You. Like Canva's free version, this tier forces you to choose from the company's limited color palette, and can be frustrating for design-savvy users. This makes the starter plan best for teams who want to create professional slideshows online but don't need granular control over how the content is displayed. Premium The Premium version gives you analytics, the ability to add your own branding and fonts to presentations, and access to the company's Premium Content Templates, which are compiled by the company itself. You also get priority support if you need help using the platform, which PowerPoint doesn't offer. It doesn't offer a service uptime deal like Prezi's top-tier version, but it also doesn't allow you to ask questions from your audience in real-time. Therefore, this version of the platform is best suited for teams who want to gather audience insights from their hosting software in addition to the content of their offerings outlined for it. Slidebean Presentation Creator That Slidebean is missing It's impressive that Slidebean can create slideshows for you, but most of the deals don't seem much more advanced than something you can create on Google Slides yourself. If you'd rather spend time inserting animations and transitions for yourself, you might want to consider Google's product instead. What users think about Slidebean Users loves the ability to import content and has a presentation built around their text and images. They also rave about the aesthetics of the deals, which can make even the smallest companies look like

today's hottest, hippest startups. However, there are complaints about frequent errors and system hiccups. Best PowerPoint alternative to audience insights: Swipe wipes are a slideshow platform with a design focus on audience feedback; it has a free plan as well as paid plans starting at \$15 per month. In addition to content and transition editors, Swipe can administer your social polls during your presentation and track engagement behavior, tell you when, where, and how the presentation was viewed, as well as how long your audience has seen each slide. Swipe is good for companies that want to collect audience data and read insights. The free version of the pricing allows you to make up to five offers with unlimited users. Payment plans range from \$15 per month for unlimited users on the Pro plan to \$36 per user per month on the business plan. This puts that in line with other hosting software in terms of affordability. Swiping tiered features Free Of Charge gives you access to all Swipe building tools, but limits you to just five deals. It also doesn't give you analysis or the ability to protect sensitive information with passwords, but you can enter hearing feedback modules with interactive polls. Users then respond to polls by clicking on responses, and this is a feature supported in both live and recorded versions of your presentation. There is currently no way to tune your audience directly into PowerPoint without using a third-party plug-in. This makes the popular app look archaic compared to Swipe. This edition of the platform is good for companies that simply want to try for themselves and upgrade to a paid plan later. Per For \$15 per month, the Pro edition offers unlimited deals, analytics, and privacy measures for your offerings. PowerPoint also provides analysis but doesn't offer live polls in any capacity, meaning you have to use another piece of software to administer audience recordings following your presentations. Despite its feature set, this version is significantly more expensive than the monthly cost of either the Starter version for Slidebean or Haiku Deck Pro. It also lacks the selection of templates found on other solutions. Therefore, this platform is best for businesses that want a presentation tool designed for lingering audience interaction. Team The Team edition is \$3 more per month, getting the cost at \$18 per month. However, the only important difference between that and the Pro plan is that it adds priority support. This means that if you contact the company for help, you'll be put in touch with a representative before customers subscribe to lesser levels or service. PowerPoint doesn't offer any similar support option, but unless you have constant issues with the platform, you probably won't need this level of service. Business This top-tiger version of the software adds visitor insights, which gives you information about how long users have seen each of your slides, as well as what time they looked at your content. This app can be used to let your team know what customers and associates find most interesting about your presentations. It also provides CRM integration that connects data from these insights to platforms like Zoho and Salesforce. At \$36 per user per month, this is the most expensive tool we've looked at. That could make it unaffordable for some smaller teams. Despite that, it can be a perfect fit for companies looking to gather rich insights from their offerings and export that information to their CRM automatically. Sweeping interactive presentations that sweep missing excel at hosting interactive audience social polls. However, if you don't need it, Swipe's slide-building tools aren't nearly as strong as the other services we've been looking at. Google Slides also offers a wider range of templates to choose from, as well as the ability to add more options about slide behavior and design on Set. What users think about sweeping professionals who deliver information seminars and other forms of presentations loves the audience polling polling in Livestock. Users also report that the platform is incredibly easy to use. Having said that, users feel that getting used to the interface takes some time. Best PowerPoint Alternative for Mobile iOS: Haiku Deck Haiku Deck is perhaps the best presentation software out there for editing on your iPhone or iPad if PowerPoint alternatives go. Although there's no Android version, it boasts the best mobile app from all the platforms we've looked at. It even comes with an AI assistant that can automatically insert images and formatting. This makes Haiku Deck ideal for iOS users who want to create deals, among other things. Haiku Deck Pricing Haiku Deck's free basic version allows you to create one presentation. Payment plans start as low as \$9.99 per month for the Pro version and go up to \$29.99 per month for the Premium version. This makes it one of the more affordable options we've compared. Haiku Deck Features Basic Haiku Deck's free Basic version allows you to start building deals on your desktop or mobile device. However, it's more of a trial program than a true, free plan since you're limited to a single presentation, but serves as a great way to get acquainted with Haiku Deck's interface and the core set of features. This entry-level package is extremely basic and you don't have privacy controls across your slides. As a result, you won't find features here like custom branding or the ability to include video like you would in PowerPoint, but you can still use the mobile app. All told, this version is not intended for serious business use. Pro The Pro version offers a set of features that will be suitable for any established company, such as custom branding, that are lacking in the similarly priced Starter version of Slidebean. It also comes with AI assistance from the company's Zuru assistant. This feature can automatically add images and suggest formats based on your text. By comparison, PowerPoint does not provide such AI help. Haiku Deck Pro doesn't include features for collecting audience feedback like Google Slides does, or the live voice features like Swipe either. At \$9.99 per month, the Pro version is ideal for Mac users willing to try out an unproven technology and be on the cutting edge of slideshow building. Premium Haiku Deck Premium gives you priority support, as do the most expensive versions of Prezi and Swipe. It also offers analytics features that tell you the time and location of users viewing your slides, at a cost of \$29.99 per month. While it's more expensive than PowerPoint, these features make Haiku Deck feel like a more modern solution. However, Haiku Deck Premium still doesn't have the audience feedback index collection features that other platforms do. It also doesn't have a great from templates to choose from like Slidebean. That said, if you want to better understand your audience's viewing behavior, then Premium Premium Consideration. Haiku Deck Image Library What Haiku Deck lacks Haiku Deck's iOS apps has intuitive and full-featured presentation tools. It's unfortunate, then, that there's no Android version of Haiku Deck. Most of the other systems we've watched at least offer a presentation slider on Android. The mobile version of Google Slides might not be as sleek as Haiku Deck, but it works on all major platforms and can be a better fit for those who want to make deals on an Android device. What users think about Haiku Deck Haiku Deck's customers finds the system easy to use and very simple. The library of images that come with the free version even lets tech-illiterate users build attractive slideshows. However, there are complaints about the lack of adjustment. Best PowerPoint alternative to sales and marketing offerings: Canva Canva is a design app that provides tools for not only building deals, but also infographics, posters, and almost any other type of sales collateral that you want to make as a leave-behind. The service, which offers a free version, has all the basic hosting building options, along with collaboration features and a library of affordable inventory images. Canva is great for sales teams who want a one-stop shop for building deals as well as other marketing materials. Canva Pricing The free version of Canva offers 1GB of online storage for your content. The Canva for Work package costs \$12.95 per user per month, making Canva one of the more expensive services we've been looking at. You need to get in touch with Cava's sales team for a quote for the Enterprise edition. Canva Tiered Features Free The entry-level functionality, Free version is limited, which is something of an industry standard in presentation software. With that said, you still get access to all of Canva's 8,000 templates, which is much more than what PowerPoint offers. One GB of data is also minimal compared to the 15GB offered with each free Google Account. It might be good to try out the platform, or for simple one-time projects that don't require advanced features like custom size or access to paid stock photos, making it an excellent option for individuals who want to use their own images in presentations. Canva for Work Canva for Work provides just about everything your business needs to make professional business content, such as support for external fonts, custom size, and access to any stock photo in Canva's library for just \$1 each. There are images to suit virtually any possible business use case, with more added every day. By comparison, PowerPoint provides only a small library of subpar artwork. The Canva for Work package does not have the audience feedback features of other systems. The is limited to internal teams that want to work together to or marketing materials. Still, Canva is a great all-in-one design platform for creating effective collateral. If you want an easy to use tool that allows you to heavily customize your deals. Then this version of Canva is worth it. Canva for Enterprise If its name indicates, Canva for Enterprise is intended for larger organizations. You need to contact their sales team for pricing, but this level has a dedicated account manager as well as administrative controls that allow you to set permissions that employees have access to what features. It also has a 99.999% uptime guarantee. PowerPoint does not provide such an uptime guarantee. Canva for Enterprise doesn't offer converse pricing like other platforms, which can be confusing to many customers. It's also hard to recommend for those who want to gather insights from the audience. Still, it's a good fit for those who want a dedicated account manager to look after their needs when using the product. Canva Presentation Template Lacking Canva canva's biggest advantage is that it allows you to create other pieces of content like ads and social media graphics without using another tool. The hosting builder is sufficient, but it doesn't offer animations and fonts that look as good as Slidebean and Google Slides. If you don't have to make sales collateration, the systems are better choices. What users think about Canva Our readers say says the range of templates makes it easy to make professional designs without being a seasoned designer. On the other hand, there are complaints that searching through templates is boring and that navigating through the library of stock images can be slow. Best PowerPoint Alternative for Highly Focused Deals: Prezi Prezi, which offers a free version, is a PowerPoint alternative that takes an unconventional approach to the common presentation. Instead of using slides you're going through, Prezi uses one very large canvas through which the provider can then navigate by zooming in and zooming out on content. The software is ideal for companies that want to quickly change the focus of a presentation or highlight an important point on the fly. Prezi Pricing You can use Prezi for free, but storage is limited to 100MB and your content is visible to all other Prezi users in their public gallery. Pricing ranges from the Enjoy version for \$7 to the top tier, \$59 per month, Pro Plus plan. Prices are in line with other services we have compared. Prezi Tiered Functions Public The Public, and free, edition of Prezi allows you to create and share presentations just as you like with PowerPoint. You can write text, format it, and insert images as you see fit within the presentation. You can also configure animations between slides. However, unlike other hosting tools, the software is designed to allow you leave to skip or fast between content with ease, rather than forcing you to browse through a stack of unnecessary chips. Like most other PowerPoint alternatives, Prezi's Public edition limits you to just 100MB of online storage. It also puts all of your content in a public gallery for everyone to see. It's not suitable for most cases for business use, but it might be worth it as a free option to put together extremely basic deals with non-sensitive information. Enjoy at \$7 per month, you can keep your Prezi content private and access it on either an iOS or Android app. You also get priority support if you need help from the company, which is better than what PowerPoint offers. This edition comes at a lower price than similar offers, except for Google Slides. However, unlike Google Slides, you can't harvest or touch images within the app. For that option, you need to upgrade to the Enterprise Pro plan or higher. Prezi Enjoy is good for small teams who want a core set of presentation building features that they can use to create truly unique and audience-made deals, and those that can edit images in another app. Pro For \$19 per month, Prezi comes with unlimited storage and the ability to work on projects offline. This makes it similar to PowerPoint, which allows you to store as much media as your machine can handle. You also get access to image editing tools, so you can touch on graphics before you put them in the presentation. Unlike the Premium version of Slidebean, it doesn't come with analytics features or external font support. It also does not have access to a library of stock images as with Canva. However, if your team makes itself with plenty of graphics deals, it's worth checking out. Pro Plus Pro Plus is designed for larger teams and adds advanced, hands-on training of the company when signing up. Prezi staff will personally guide your team members through the system's functions. You won't get such an opportunity from Microsoft to learn PowerPoint. Prezi Pro Plus is one of the most expensive packages we've looked at, and it's still missing things like the ability to collect audience feedback. Still, it's a very strong offer. If you want to save yourself the hassle of teaching all your employees how to use the software, you're likely to appreciate Pro Plus. Prezi Flexible presenting what Prezi lacks in the right hands, a Prezi presentation can look fantastic. Unless you have a keen eye for design, however, it's hard to make a Prezi that doesn't look junk and nonsense. If you don't have the skill or the care to make use of Prezi's nonlinear design, if Google Slide's conventional, PowerPoint-esque design is a better option. What Users Think About Prezi Users Who Are Designers By Trading Love Prezi And The Fact That allows them to make deals that go beyond the general general However, regular business users find that the builder is extensive and says it's hard to make nice deals. Bottom Line Over the years, PowerPoint is matched by cheaper, sometimes even free offers that allow you to make powerful deals. The fact that these systems are all cloud-based is also a bonus since you can create and edit content on any device. Google Slides is free to use, highly intuitive, and has all the editing options you need to build an effective presentation. The real-time collaboration features and hosting tools are very useful, and the fact that you can import templates from a third-party service makes it the best PowerPoint alternative on the market today.
