753 area code nz

Sign up for the BuzzFeed Quizzes Newsletter - Binge on the latest quizzes delivered right into your inbox with the Quizzes newsletter! Getty Images Phone scammers are becoming trickier than ever to avoid, a new column on Inc. reveals. Once unsuspecting people pick up, thieves can make money at premium costs, or even use their vote to authorize other accounts. However, a quick look can reveal whether the conversation means real business or not. According to Joseph Steinberg, CEO of SecureMySocial, certain area codes can tip off potential victims that something is wrong. In the past, criminals used to hide behind 900 songs that racked up high costs, but the public quickly caught on. Then scammers tried a new approach. Many schemes soon featured the numbers 809, an international area code from the Caribbean that appeared to have originated from the United States. As familiarity with that ruse also increased, crooks have since moved to other islands that still fall under the +1 country code. Criminals are known to use caller IDs with the area code 473, which appears to be domestic but is actually the area code for the island of Grenada, he wrote. According to AARP, taking calls from one of those foreign countries can cost \$5 per minute or more. The bot or person behind it can also convince listeners to spend money on sketchy timeshares or cruises. In other schemes, people pretend to need help or money because they are in danger. Steinberg advises never to return a missed call from an unknown number - if it's real, the person can send a text message or leave a voicemail. Remember, it's unlikely that someone you don't know - who is in need in a location where you're not known - would choose a random number in another country and ask you to help them, he says. They were going to call the police. To protect your wallet, watch out for 473, 809 and 900 numbers. It also doesn't hurt to check missed calls against the international net codes starting with +1: International Area Codes With a +1 Country Code 242 — Bahamas 246 — Barbados 268 — Antigua 284 — British Virgin Islands 345 — Cayman Islands 441 — Bermuda 473 — Grenada, Carriacou and Petite Martinique 649 — Turks and Caicos 664 — Montserrat 721 — Sint Maarten 758 — St. Lucia 767 — Dominica 784 — St. Vincent and Grenadines 809, 829 and 849 — Dominican Republic 868 — Trinidad and Tobago 869 — St. Kitts and Nevis 876 — Jamaica [h/t 10TV This content is created and maintained by a third party and entered on this page to help users provide their email addresses. You may find more information about this and similar content on piano.io Zip codes and zip codes are codes used to facilitate mail delivery and use area codes to specify a geographic region when calling a phone number. Instead of being through a big, large, phone book, you find and check zip codes and netcodes on the web pretty easily. If you have an address or partial address, you can find the zip code through USPS Zip Code Lookup, a tool on the U.S. Postal Service website. You also search by place or state, or find all the cities that are part of a particular zip code. The International Post Codes site, maintained by Columbia University, has a comprehensive index of domestic and international zip codes, in addition to mailing abbreviations, policies, and best practices. You also use different search engines to find zip codes. For example, if you want to use Google to do a zip code search by address, type what you know about the address to see a map of the location with the included zip code. You even type something like South Laurel MD zip code to see them all for that area (and to find links that show a full list of zip codes for that region). You also enter a zip code to see the geographic location to which it belongs, as well as a map and other related web results, such as cities that use that zip code. If you don't enter the zip code at the end of the search, Google can view unrelated information. For example, a search for 90210 shows information about the TV series, while 90210 shows postcode information on the zip code. You have a zip code with DuckDuckGo, too. Type in a zip code and DuckDuckGo returns a map, zip code location, weather, real estate, and other relevant web results. A postcode lookup on Bing brings back what city/locality it covers, maps, and local attractions such as supermarkets, hotels and movie theaters. If you type a partial address, Bing fills it out for you and reveals the zip code. As with a zip code, you use a search engine to find a area code by searching for the city. To do the opposite and find out which part of the country an area code is related to, just enter the area code in the search engine. To find a area code with Google, type the name of the city and the state you're looking for, followed by the words area code. Usually you find what you need. For international listings, look for a phrase such as Kenya call code, and you will receive an informative answer with the numbers you need to make a call in that nation. Enter the place and state in a new Bing search, and you'll probably see Google-like results that show you the net code at the top of the results. The same applies to international call codes. Another way to find a area code online is with Wolfram Alpha, which bills itself as Computational Intelligence. This data-based search engine does not display results like the others listed on this page, but with a little You will find some unique information about cities and states that you may not find on any other search engine. Using Yahoo to find a area code is like using Google; Google; enter the name of the city and the state, followed by area code, and you will get an instant result. Finding international codes is not as easy with Yahoo as it is with Google, but of course you still use Yahoo to find other websites that can give you that information. A lot of sites specialize in finding field codes that a simple search engine query might not reveal. You use these free sources to find almost every area code and/or country calling code in the world: Netcodes: Features netcodes from mostly the United States, although other countries are scattered through here as well. BT Phonebook: Use this site to find net codes in the UK codes: this site asks you which country you're calling and which country you're calling to assign the correct country code, area code or both. LincMad: A zip code map with a visual display of net codes in the United States and Canada.AllAreaCodes.com: Like LincMad, you'll get a full U.S. and Canada area code card, as well as links to region-specific mesh lists, network code details (for example, wireless or landline connection list, when introduced), search tools, and printable area code lists. Thanks for letting us know! Tell us why! George Diebold/Getty Images The 578 area code is one of the unassigned codes for the North American Numbering Plan, which includes the United States, Canada, certain Caribbean countries and U.S. territories. Using a phone number with a 578 area code is an attempt to disguise the source of a call. Area codes in the NANP were first used in the early 1950s, with 86 of a possible 152 area codes in use. As the number of phone users increased over the decades, additional area codes were overlain to supplement needs in higher density areas of the continent. For example, area code 917 overlaps the net codes 212 and 718 in the New York City region to accommodate the significant increase in the number of phone users there. Area code 543 is not currently in use in North America. The closest existing area codes to this numeric are 541 for Eugene, Oregon, and 551 for Newark, New Jersey. Net codes are managed and handled by the North American Numbering Plan Association or NANPA. What people usually call netcodes are officially known as NPA codes. Each set of three digits (000-999) is theoretically a area code, but currently there are only 316 of these codes in use. In addition, some codes are stored as special markings of some kind. For example, the 800 area code is used for free calls, where the recipient pays for the call instead of the caller. Ugurhan Betin/Getty Images The area code 668 is not area code in the United States. However, it is a valid area code in Oujda, which lies northeast of Morocco. Calls received from area code 668 can be traced back to telemarketers, invoice collectors and surveyors. The 668 area code is to disguise the valid phone number, making it impossible to locate the call or track the company that makes the call. Phone calls and text messages received from this area code can be reported and added to the list of fake numbers. Scammers are also known to use invalid phone numbers. Area codes 520 and 928 are generally (but not exclusively) appropriate for all cities and cities that are not located in the metropolitan area of Phoenix, Arizona. The largest arizona city within area code 520 is Tucson. The largest city of Arizona in area code 928 is Flagstaff. See a map of Arizona Area Codes. Note: These net codes only cover landlines. Mobile phone area codes are not limited by geography. A person who lives in a house in a city can get wireless service with another area code.
