Charging the headset You must charge the headset (more than 6 hours) before using the headset for the first time. 1.Connect the USB charging cable to the USB charger on the headset. 2.The indicator will turn red when charging. 3.Full charging takes about 2 hours. 4.The red indicator turns off and turns blue when charging is complete. © 1996-2014, Amazon.com, Inc. or its affiliates © 1996-2014, Amazon.com, Inc. or its affiliates Top Reviews Latest Top Reviews WhatsAppAppPinterestTwitterLinkedInRedditAfter reading our review of MPOW H12 and MPOW H17, users have asked us how to pair these MPOWs with a laptop or smartphone. Although this is an easy process, sometimes pairing can be messy or troublesome. We tried to explain in simple steps how to pair all MPOW wireless headphones quickly and easily. Please note that this method allows you to connect your headphones to any device, even smart TV. Pair the headset with Smartphone Step 1: Put the headset in pairing mode If this is the first time you pair the headset to any device, simply turn on the device by pressing the power button for 3 seconds and you'll hear the Pairing message as soon as you hear On. If your headset is already paired and connected to another device and you want to put it in pairing mode. Press the power button for 7 seconds and you will hear the pairing message. Step 2: Turn on Bluetooth on your smartphone after turning on Bluetooth, make sure your device is in detection mode. Step 3: Click the Pair New Device option in the Bluetooth settings After clicking the button, wait a while. When the search is complete, you should be able to see your MPOW headset in the list. Step 4: Select the mpow headset from the search list The device name will be the model number of your headphones, in my case it is MPOW H17. If you receive a pop-up window as shown below, press the PAIR button. Step 5: Your headset has already been paired with your smartphone, you'll hear the message connected as soon as your smartphone connects. NOTE: If the headset is already connected to another device and you are still trying to pair your headset, you will receive the following message. Pair the headset with a Step 1. laptop: Put the MPOW headset into pairing mode If this is the first time you pair the headset to any device, simply turn on the device by pressing the power button for 3 seconds and you will hear the pairing message as soon as you hear On. If your headset is already paired and connected to another device and you want to put it in pairing mode. Press the power button for 7 seconds and you will hear the pairing message. Step 2: Turn on Bluetooth on your by going to Step 3 of Bluetooth Settings: Click Add Add or another device in Bluetooth settings Step 4: Select Bluetooth from the list (see image below) After clicking the button, wait a while. When the search is complete, you should be able to see the MPOW H17 headset in the list. Step 4: Select the glasses from the search list The device name will be the model number of your headphones, in my case it is MPOW H17. Step 5: Your headphones have already been paired with your laptop, enjoy the sound You will hear a message that says connected Connecting your MPOW headphones to any smart device follows a similar approach. If you encounter any problem, even after following the above steps, leave it in the comments box and I'll be happy to help you. WhatsAppFacebookPinterestTwitterLinkedInReddit Neckband headphones have grown in popularity over the past few years with people, especially because of the convenience they provide. Mpow Jaws is one of the newest brands on the block, which has manifested the growing popularity of neck headphones and come up with its own line of charming products. But each device comes with its own share of connection-related problems that need solving. Let's learn how to connect the headset to Mpow Bluetooth. How do I turn on my Bluetooth headphones? 1. Make sure the Bluetooth headset is sufficiently charged to turn on. If it does not connect to the charging source. 3. While the headset is OFF, press and hold the Multifunction button for more than 5 seconds until you see the LED lights light up blue and red. 4. The headset is ready to be paired to your device. How do I connect my headphones to my smartphone? Once you've turned on your Bluetooth headphones, they've entered pairing mode. This is when you need to connect the headset to the desired device. You need to make sure that the headset and bluetooth device are within 1 meter of each other. Then follow the instructions given below to connect the headset to the specific smartphones. For Android – Go to the settings option on your smartphone. Tap Connections.Go Bluetooth options from there. There you will find a section titled available devices. The name of your Bluetooth bluetooth headset will appear under this section. Tap the name of the headset and wait two seconds for your Android smartphone to connect to the headset. For iOS, go to the settings menu on your iPhone.Tap on Bluetooth.Search for the mpow Bluetooth headset that should be listed under the Other devices tab. on it to connect to the headset. For Windows 10, go to the Windows search box and type Bluetooth Bluetooth and other devices window will appear. Make sure Bluetooth is turned on. Click Add Bluetooth and another device option. You will find your headphones with listed under this space. Select the headset and wait a few seconds to ensure a connection between the headset and the Headphones. For MacOS GO to the Apple menu on your Macbook.Navigate to system preferences. Your Bluetooth headset will be listed below. Select headphones, click Connect.Click on Accept when and if prompted. How do I know if the headset is connected correctly to the device? The clear indicator of a successful connection between your device and your mpow jaw headphones will be the LED indicator that will stop blinking. Wear the headset through your ear and play some music on your device to check that the connection is properly secure. If you find that it has failed to connect even after following the above set of instructions, then remove the entire list of existing devices from your smartphone and repair the mpow headphones again. You can repair the headset by long pressing the multifunction button while the blue light flashes three times or long pressing the multi button together with the + volume button for more than seconds. How to restore mpow jaws Bluetooth headphones? Every time there is some unprecedented problem in MPOW jaws Bluetooth headphones that you can not find a solution, more often than not reset will fix it. Make sure the headset is turned off. Press and hold the power button for about 6 seconds. The LED indicator will flash alternately with red and white colors. This will mean that the headset has been reset. Turn the headset back on and pair and connect to your device, and the problem seems to have been resolved. How do I charge the headset? As mentioned before the first thing to ensure when you turn on the headset is sufficiently charged. The red light indicates that the headset requires charging as long as they are turned on. Connect the headset with a suitable charge and you will notice that the red light has stopped flashing and is now constant. Once charging is competing, the light will turn blue and that's when you need to disconnect it from the external power source and turn it on. If your Bluetooth (headphones) headset is not charging, there may be a battery that needs to be replaced or charged freely, especially this is the case, so you need to make sure that the USB cable is securely connected to the headphone jack and the other charging stick or USB on the power adapter or laptop/PC. I will show you different ways how to remove and solve wireless or Bluetooth headphones not charging problems, I already face such a problem before with my Bluetooth headphones and fix it, but since I try to take all possible reasons behind such a problem I decided to write this tutorial so you can solve this question yourself easily no matter what your Bluetooth type of headphones or brand. Possible reasons behind the Bluetooth headset are not charging? Faulty battery: Rechargeable batteries in wireless headphones may be defective by the manufacturer, so if this is the first time you've tried to charge your headphones, you can think of this possible reason. Batteries that don't charge for a long time: If your Bluetooth headset is held for a very long time without charging it, it can reduce battery life or lead to death, this is what's called Over Diluted, so maybe if that's the case, you should consider this possibility as well. Faulty charging cables: Bluetooth charging cables are often the cause of battery charging or not charging at all, you should expect this. Faulty charging ports: This is a very common reason why Bluetooth rechargeable batteries do not charge, sometimes we think the charging cable is defective, but unfortunately, the charging port or socket to which the charging cable is connected has physical damage. How to fix my Bluetooth headphones not charging problem? Since there is no specific way to solve the problem of charging Bluetooth, because the reasons why batteries are not charged are many, I am leading you below on what to do if you have ever encountered this problem by taking general predictions and troubleshooting steps that will mostly one of them decide that your headphones are not charging batteries Check the status of your PC: If you are charging the wireless headphones from the computer via the USB charging cable, you need to make sure that your PC/laptop is turned on if your PC/laptop is turned on if your PC/laptop has flipped over there will be no power source to charge the Bluetooth battery ☹. If your computer's status has changed to hibernation, charging won't work properly. Indirect connection, for example via USB hub: Charging won't work properly. Try using The Wall Faceplate Source: Try this option after you try different USB ports on your computer to see if there's a problem with your computer's USB port. Check entry points (headphones and power source): Whether it's clear for any dirt or dirt, as this may interfere with clear communication between the two devices. Check that USB is inserted correctly: In the headset and power ports. Try a different USB charging cable: If you have another USB cable that's suitable for connecting to your Bluetooth charging port, just to clarify whether the problem is from your current charging cable. Check the charging port for the headset: Make sure the charging port is functioning properly and is not loose or damaged, maybe inside the headset is broken, and this often happens, especially if the headset is not branded using this port every time you charge it, the port may break from the inside. (Learn how to repair the Bluetooth Micro USB charging port) Keep the Bluetooth headset connected to the charging source: If your headphones are not charged and used for a very long time (too diluted), you probably won't feel an indication of charging in the battery, thus keeping the Bluetooth headset connected to the power source for a long time, you may see that the battery starts charging again. The ambient temperature exceeds the charging temperature range: If you charge your headphone battery at a operating temperature higher than the charging temperature of 5 °C – 35 °C, this may be the reason why it is not charging. About logitech style for gaming headphones: If it shows solid amber light all the time not pulsating, does not turn off or charge anymore. A simple trick can make your day while it's on, quickly turn the device on and off over and over again. somehow it fools the cerebellum to restart after a few 10 headphones will start charging and connect as normal. You may have a different problem: You may have a different problem when the battery is fully charged, but the headset isn't working (To learn more, check this step). Headphones don't play even after charging? what am I supposed to do? my battery is low? If you have found that the battery of wireless headphones looks dead, you should check this again before taking action by following below: Facts about Headphone BatteriesNormal headphones use rechargeable batteries. The first charging of new batteries must be at least 8 hours continuous, even if the it is charged when you first use it, you must consume all charged capacity. About 4 hours is the time it takes to charge the exhausted battery to its full capacity. As long as you charge the Bluetooth headset and the battery continues to rise by more than 35 °C and does not charge properly every time, then you need to replace the battery. The battery can run out quickly if your Bluetooth headphones aren't in use for a long time, but after a few recharges, battery life will improve. Avoid exposure to bluetooth headphones to extreme temperatures, direct sunlight, sand, moisture, dust or mechanical impact, as this will reduce battery life and/or performance. To avoid excessive battery discharge while storing wireless headphones for a long time, charge the battery to its full capacity once every 6 months. Battery life about 500 times (full charges / full discharge), so if you feel that the life of the built-in rechargeable battery drops significantly during normal use, this means that the battery needs to be replaced with a new one. Do not keep the batteries on the headset always charging after they are fully charged, this will reduce the battery life. The micro USB charging port of my headphones is brokenif you have checked all the descriptions and points / steps above and still your wireless headphones are not charging, then you should definitely check the micro USB port to charge it and fix it accordingly, as shown below: Micro USB miniature connectors are probably disconnected or there is a crack in their solder that makes the break with the circuit board, therefore there is no possibility to charge the battery of the Bluetooth headset. (Please refer to the image below, to see micro USB on the side of the board in the headset) To determine what you need to take off the headset by removing the pillow oval and opening all the screws to see the circuit board just like the image above and solder connecting 5 pins back (or you can just use any additional solder just use the soldering tool to melt the existing pins thus will connect back pins to the board and close the crack. Apple Bluetooth headsets don't charge APPLE HEADPHONES (AIRPODS)Sometimes Apple (AirPods) headphones encounter some charging problems based on this, as you know, AirPods are designed to charge when you insert them into the charger and the idea is to hold down a charge that is suitable for charging airpods several times. And while the base acts as a power bank for AirPods, it rarely shows light to appear when trying to charge AirPods with or without an iPhone in the docking station or separately by connecting the charging cable directly to the wall power supply. Now, to solve this issue, you can follow below below Steps: Check the lightning cable from end to end whether you will find any kind of damage or a small incision. Check the Lightning USB cable for any dirt in it that you may find, if there is any dirt you need to clean it up, this may be the cause of the problem. Inspect the Lightning connector cable for any damage or dirt, oil... etc. if you find someone (So far the problem solved?) Look around the Lightning socket on the AirPod base, whether it's broken or contaminated inside, try to clean it up if it's not clean. If you're using the wireless charging system that charges the AirPod case, try charging your iPhone with it and see if the iPhone is charged or not. If it's not charged, the problem is with the wireless charging station. Check the wireless charging cable for damage. BEATS SOLO headsetBeats models solo headphones have sometimes problems charging and difficulties, as some people complain, but for this kind of headphones comes from Apple, I found some way to solve it. Hold down the power and volume down button for 10 seconds to reset them. If the first step does not do the job hold the power and volume for more than 10 seconds until you plug it into a famous good power source and cable (Charging should light up and flash) flashes) flashes) flashes)
