Among the devices that will be coming stateside is a new phone called Liquid X2 and a trio of new fitness trackers called proper mutant liquid, active liquid mutations, and liquid mutation curves. The company also announced that the Windows Phone Liquid M220 we saw at the Mobile World Congress is now coming to the U.S. Here's everything we know so far about the new mobile devices from Acer that are heading toward the United States. Last year's Acer Liquid X2 and Liquid M220, Acer unveiled its first fixture and the first with three SIM slots. Acer makes liquid X2 on them, basically by smoothing those two phones together. The X2 sports a 5.5-inch screen, a 13-megapixel camera with a f1.8 doperator, and a 64-bit octa-core processor. In addition, it also got a great battery, which is something Acer is very proud of. The X2 is really a combination of these good things, ST Liew, president of Acer Smartphone Group, said at the event at the NYC World Trade Center. And we slap a 4,000-mile-long A.D. there. A flip cover A narrow, vial-shaped window into lcd screens, allowing a variety of bits of information through pop-up, from music and battery life, to email information and the like. There is still no word on the rest of the specifications or pricing for this phone. Acer also officially announced that entry to the liquid level of the M220 with Windows Phone 8.1 is coming to america. It has a 4-inch screen with 233ppi (pixels per inch), a 5-megapixel main camera, and a 2-megapixel selfie cam that can also be called. It costs only \$80 and will hit stores in June. A proper, active, and curved leap liquid last year, the company unveiled fitness group Acer Leap. Liu says this year it is announcing three new wearables in one family, focusing on improving people's health. Products have three goals: looking great, fitting into lifestyle, and improving people's health. Liquid Leap fits the fitness booster with a 1-inch touchscreen, heart rate sensor, and stress sensor with gold-plated sensor pads for galvanic skin response. The second device, Liquid Mutant Active, is a wearable sports touchscreen with similar specs. The third device, called liquid leap curve, exercises the same Fit specifications but has a different design style. Liu said this one here is fabric. And this one here is a very cool design. Acer is also in deep exploration with other companies with similar interest. The restructuring of amd editors' recommendations comes with a dramatic drop in the price of its microparvaries, according to new official data released on Monday. In an update to its microprocessor pricing page, AMD announced a high-end price cut on amd Athlon 64 FX and Athlon 64 X2 Microprocessor. The fastest Athlon 64 X2 processor, which is 3.0 GHz 6000+, is currently priced at \$241, slightly more expensive than intel's inter-range E6400, a 2.13 GHz chip that sells for \$224. AMD said Monday it plans to cut 2007 capital spending by about \$500 million, limit hiring to critical positions, and report revenues that will be significantly be lower than Wall Street estimates. More details of the renovation will be made available on April 19. AMD removes AMD FX-62 and FX-70 chips from its product portfolio and sells AMD FX-74 and AMD FX-72 chips for \$799 and \$599, respectively, eliminating the \$999 price category. Many of the chips remaining on amd's price list use am2 socket or F socket form factor, rather than the older 939 socket interface. AMD's flagship Athlon 64 X2 Line, meanwhile, received significant reductions. The price of +60 fell 48 percent, while the 5,600+ now priced at \$188, fell 42 percent. AMD 5400+ was removed from the price list, while the price dropped \$200+ from \$232 to \$178, a more modest 23 percent The declines fell to the slowest part of the +3,600, down from \$102 to \$73. AMD also trimmed the price of its older Athlon 64 chips, which previously ranged from \$102 for amd 4000+ part to \$78 for amd Athlon 64 3200+. Today, those prices are now from \$94 to \$58. Few cuts were made to the Semtron line as well. AMD left prices unchanged for its Torrione chips. While cpu prices generally refer to a large number of 1,000 units, reduced pricing generally trickles down to single retail units. Lower prices also affect the prices and configurations of PCs, although price adjustments can occur over a period of weeks.
