It is primarily designed for mowing grass on well-maintained lawns on residential properties. It is not intended for brush cutting or agricultural applications. Read this information carefully to learn how to properly operate and maintain the product and to avoid injury and damage to the product. The user is responsible for the proper and safe operation of the product. You can contact Toro directly at www.Toro.com for product information and accessories, to help you find a seller, or to register a product. Whenever you need service, genuine Toro parts or additional information, please contact your Authorized Service Dealer or Toro Customer Service department and prepare the model and serial numbers of the product. Figure 1 specifies the location of the model and the serial numbers of the product. Save the numbers where you want them. Important: You can use your mobile device to scan the QR code on the decal with the serial number (if equipped) to access warranty, parts and other product information. This manual identifies potential hazards and has safety messages marked with a safety warning symbol (Figure 2) that indicates a hazard that could cause serious injury or death if the user fails to comply with the recommended precautions. This manual uses 2 words to highlight information. Important draws attention to special mechanical information and attention emphasizes general information worthy of special attention. California Proposition Warning 65 Warning Engine Exhausts from this product contains chemicals known to the state of California to cause cancer, birth defects, or other reproductive harm. It is a violation of California Public Resource Code Section 4442 or 4443 to use or operate the engine in any forest-covered, brushed, or grass-covered area unless the engine is equipped with a spark limiter, as defined in Section 4442, maintained in an efficient state or the engine is built, equipped and maintained to prevent fire. Gross or net torque: The gross or net torque of this engine has been assessed by the engine manufacturer in accordance with society of automotive engineers (SAE) J1940 or J2723. According to safety, emission and operating requirements, the actual engine torque in this class of lawnmower will be much lower. Please refer to the engine manufacturer's information Machine. Recommended Maintenance Schedule Interval Service IntervalMaintenance Procedure Check engine oil level and add oil as needed before each use or daily. Make sure the engine shuts down within 3 seconds after releasing the spatula control bar. Spatula. with clean grass felling and dirt from under the machine. Every 25 hours air filter service; more often in a dusty state. Charge the battery (if equipped) for 24 hours. Replace the air filter annually; replace it more frequently in a dusty state. Replace the engine oil. Replace the blade or sharpen it (more often if the edge becomes dull quickly). Clean the engine by removing dirt and dirt from its upper and lateral parts; clean it more frequently in a dusty operating state. Annual or before storage Empty the fuel tank before repair as directed and before annual storage. Important: Additional maintenance procedures can be found in the engine owner's manual. Safety of maintenance Disconnect the spark plug cable from the spark plug and remove the electrical start button before performing any maintenance procedure. Wear gloves and eye protection when servicing the device. The blade is sharp; contact with the blade may cause serious injury. Wear gloves when servicing the blade. Do not repair or change the blade(s). Never tamper with safety devices. Check their correct operation regularly. Overturning the machine may cause fuel leakage. The fuel is flammable and explosive and can cause injury. Start the engine dry to remove the fuel with a manual pump; never siphon the fuel. To ensure optimum performance and continuous certification of machine safety, use only genuine Toro spare parts and accessories. Spare parts and accessories made by other manufacturers can be dangerous, and such use may void the product warranty. Preparing for maintenance Turn off the engine, remove the electric start button (if equipped) and wait for all moving parts to stop. Disconnect the spark plug cable from the spark plug (Figure 25). After the maintenance procedure, connect the spark plug cable to the spark plug. Important: Before tipping over the machine to change oil or replacing the blade, allow the fuel tank to dry during normal use. If you need to tilt the machine before running out of fuel, use a manual fuel pump to remove the fuel. Always tilt the device to the side, with the baton down. Servicing the interval procedure for air filter maintenance Maintenance Every 25 hours Air filter service; more often in a dusty state. Replace the air filter annually; replace it more frequently in a dusty state. Unplug the top of the air filter cover (Figure 26). Remove the air filter (Figure 26). Check the air filter. Note: If the air filter is over-soiled, replace it with a new filter. Otherwise, gently touch the air filter on the hard surface to Pollution. Install an air filter. Use the clip to install the air filter cover. Changing the service interval of engine oil maintenanceAvailability every year Changes engine oil. Motor. Engine oil is not required, but if you want to replace the oil, use the procedure below. Note: Start the engine a few minutes before the oil is erased to keep it warm. Warm oil flows better and carries more impurities. Engine oil data Engine oil capacity0.44 L (15 fl oz) Oil viscositySAE 30 or SAE 10W-30 detergent oil API service classification API'sj or higher Move the machine to an even surface. See Preparing for maintenance. Remove the level indicator by rotating the cap counterclockwise and pulling it out (Figure 27). Tilt the machine sideways (so that the air filter is up) to drain the used oil from the oil filling tube (Figure 28). After emptying the used oil, return the machine to the working position. Carefully pour about 3/4 of the oil capacity into the oil filling tube. Wait 3 minutes for the oil to settle in the engine. Wipe the level indicator for cleaning with a clean cloth. Insert the level indicator into the oil filling tube, and then remove the level indicator. Read the oil level on the level indicator (Figure 27). If the oil level on the indicator is too low, carefully pour a small amount of oil into the oil filling tube, wait 3 minutes and repeat steps 8 to 10 until the oil level on the level indicator is correct. If the oil level on the level indicator is too high, drain the excess oil until the oil level on the level indicator is correct. Important: If the oil level in the engine is too low or too high and you are working on the engine, you may damage the engine. Securely install the level indicator in the oil filling pipe. Properly recycle used oil. Charging batteries to electric start models IntervalMaintenance Service procedure Every 25 hours Charge the battery (if equipped) for 24 hours. CALIFORNIA Proposition 65 Warning The use of this product may result in exposure to chemicals known in the State of California to cause cancer, birth defects or other reproductive harm. Initially, charge the battery for 24 hours, then monthly (every 25 starts) or if necessary. Always use the charger in a sheltered area and charge the battery at room temperature (22°C or 70°F) whenever possible. Connect the charger to the harness under the electrical start button (Figure 29). Plug the charger into a wall outlet. Note: When the battery is no longer charged, recycle or dispose of the lead-acid battery in accordance with local regulations. Note: The charger can be powered by a 2-color LED display indicating the following charging states: A red light indicates that the charger is charging the battery. A green light indicates that the charger is fully charged or the charger is fully charged from the battery. A flashing light that turns red and green means the battery is almost fully charged. This condition only lasts a few minutes until the battery is fully charged. Fuse replacement for electric start modelsIf the battery is not charging or the motor is not working electric starter, the fuse may be blown. Replace it with a plug-in fuse of 40 A. Lift the rear deflector and locate the battery compartment (Figure 30). Wipe any debris from the battery compartment. Remove the screw that secures the battery compartment, pull out the battery and find the fuse (Figure 31). Replace the fuse in the fuse holder (Figure 31). Note: The device is equipped with a spare fuse in the battery compartment. Install the battery compartment with the screw removed in step 3. Mount the cover on the battery compartment. Lower the rear deflector. Replacement of the interval procedure for maintenance of the blade Every year Replace the blade or sharpen it (more often if the edge quickly becomes dull). Important: A torque wrench is required to mount the blade correctly. If you do not have a torque wrench or do not feel comfortable following this procedure, please contact an authorized service technician. Examine the blade when you run out of fuel. If the blade is damaged or cracked, replace it immediately. If the edge of the blade is matte or notched, it should be sharpened and balanced, or replaced. Warning Blade is sharp; contact with the blade may cause serious injury. Wear gloves when servicing the blade. See Preparing for maintenance. Tilt the device sideways with the air filter up. Use a block of wood to keep the blade stable (Figure 32). Remove the blade by recording all mounting equipment (Figure 32). Install a new blade and all mounting equipment (Figure 33). Important: Position the curved ends of the blade in the direction of the machine housing. Using a torque wrench, tighten the blade screw to 82 N·m (60 ft-lb). Important: The screw with a height of 82 Nm is very tight. Holding the blade with a block of wood, place the weight behind the ratchet or wrench and securely tighten the screw. This screw is very difficult to see through. Adjust the self-propelled drive every time you install a new self-propelling cable, or if the self-drive drive is out of control, adjust the self-drive drive. Turn the adjustment knob counterclockwise to loosen the cable adjustment (Figure 34). Adjust the cable tension (Figure 34) by pulling it backwards or moving forward and holding it. Note: Push the cable towards the engine to increase grip; pull the cable away from the engine to reduce grip. Turn the adjustment knob clockwise to tighten the cable adjustment. Note: Tighten the knob firmly by hand. Page.
