The findings of modern researchers over the past two decades now support this speculation at once deemed with evidence revealing that Sphinx thousands of years older than Egyptians have claimed, that the pyramid is not a tomb but a geomechanical power plant, and that megaliths Nabta Playa revealed the star map a complex existed 4,000 years before conventional historians considered such knowledge possible. Most of the past for prehistoric civilisation has depended on esoteric traditions and mythical narratives. Using hard scientific evidence from archaeology, genetics, engineering, and geology, as well as sacred and religious texts, Malkowski points out that this mythical narrative is based on actual events and highly sophisticated civilisations that existed before Egypt and Sumer. Tying the fall of his light to the loss of the cultural mystery of Cro-Magnon, Before Pharaoh offered an interesting new view of humanity's past. Flammel, Nicholas. It is a synthesis based on general insights contained in all traditions of wisdom into universal legal operations on the one hand and advanced scientific findings that are consistent with those insights instead. These principles are called universal because they work at all stages of existence, applicable to everything that exists and creates peace and harmony in the universe. Insight into universal legal operations reveals the entire view of the new world. It helps us understand how everything works in the universe, which we really do and how we can make a more conscious choice in line with this universal law. More so it helps us understand what works and what doesn't work in the long run. Everything that operates in accordance with universal law, follows the path of resistance at least and is in harmony with a larger overall. It makes us realize that while everything in the universe works harmoniously with these principles, many aspects of our personal life and our Western culture are not aligned with the operation of these fundamental principles. If we choose to act in accordance with universal legal operations, it will be easier, will be more aligned with whom we are really and more harmonious with the whole. These options are difficult to make though, if we do (tm)t know those principles. For that reason rediscovery the work of these principles seems very important. Currently major changes and global imbalances are increasingly becoming more and more people are beginning to feel the need for a clear and well-founded vision into universal law, as this gives an understanding of what it takes to restore balance and harmony within us as well as around the world. Because the nature of these principles is universal, they apply to all aspects of our individual and social life. Therefore, they can be used as reference frames for all personal and social transformations aimed at greater harmony in us and with a greater overall. It focuses on the pragmatic role of ineshable sentient and interplay experiences that are insegrate and ineshiable with the execution of causes. Part I of the book deals first with the need to synthesize the knowledge tradition of separate truth discoveries: third personal scientific technology, and the first human-personal wisdom tradition. A conceptual framework for mind reality is then proposed. Drawing from uniting natural laws in current physical and biological sciences, the reality of the mind is illustrated in terms of an open dynamic system between one with both aspects indicated and Home. In this entire system, each individual's mind always co-creates and develops together with collective minds or other groups at various levels. It is also considered that the units of interaction in the reality of the mind are thought or intended. Evidence of support from psychology, parapsychology and ancient perennial philosophy is presented. The second part of the book addresses the pragmatic consequences of the proposed mind reality. At the individual level, it is argued that the sentient experience can serve the function of guiding, verifying and nurturing the life work of an individual. The first existing personal account option is presented to reflect this point. At the collective level, the current dominant collective thinking of new capitalism has unfortunate consequences for the sense of

freedom, education and human morality. Such consequences relate to external and self-destruction of intrinsic and intrinsic value. To avoid this happening, the collective effort in transforming consciousness becomes necessary: the core task lies in the closure of causes and sentence divides. Jesus' supernatural story is not magical Messiah history but a spiritual allergy carefully designed to guide the journey of mystical discovery. A little more than a century ago, most people believed that the strange story of Adam and Eve was history; today it is understood to be a myth. Within decades, writers Timothy Freke and Peter Gandy argued, we would also be amazed that the great Story of God-born from the virgin, which turned water into wine, and who rose from the dead-could have been interpreted as anything but deep parable.
