Golf Cart Image by Earl Robbins of Fotolia.com Though golf carts are, of course, common visibility on golf courses, these small vehicles are also used by many non-golfers for other reasons. They may be used as a means of transportation by the elderly or people with physical disabilities, which makes walking difficult. Because they are designed with enough cargo rooms to transport at least a couple of golf bags, some people even use them to transport small items. Golf carts are simple to use, and golf carts are easy to start with. Check to make sure the parking brake is involved and choose the lever drive switch to either forward or reverse, depending on which direction you want the gased golf cart to go. Turn on the bright position key of the golf cart. If the engine is cold, pull out the choke handle and hold it when starting. You don't have to do this if the engine is already hot. Release the choke handle and make sure there are no blockages in your path. Press down on the accelerator pedal, and the golf cart will move with gas. Adding or replacing lights on the golf cart is easily done by a handyman with basic skills and simple hand tools. It's a process of beering, whether for a golf cart with gas or electricity. Disconnect the negative battery terminal. Mountain headlights are as high on the cart as possible for the best visibility. Installing braces that simply clamp around a round structure, such as a bumper or roll bar, makes it simple. Determine the best place to ride off the magic switch that controls your lights. The left side of the dash is a common place for it. Practice a hole to mount the switch. Overall this will be a 1/2-inch hole, but check your switch to make sure the yarn section will go through a 1/2-inch hole. Connect an inline fuse holder lead to the positive battery terminal with a loop terminal without selling. Use the butt connection and extend the lead of the other inline fuse holder to the terminal center switch switch. Connect it to the switch with the insulating material sped terminal. Run a 16-pint wire from the second terminal of the juggling switch to headlights. Connect it to the headlight using the butt fastbing without kicking. Strip over all connections with electric strip and secure all wiring with nylon wire bonding. Mount the juggling switch in the hole you've dug before. Reconnect the negative battery terminal. Turn the switch on to the bright position to test your lights. By Raymond Tang adding horns to the golf cart can greatly increase his presence both on the course and on the road. With a large variety of post-market horns available, and all of them fairly serist for installation, there is no reason to stick with dull, stock horns. The most common installation of a single wire horn on a cart without an existing horn system, but with precise use Little knowledge of the same electronics process could easily be adopted for dual wire horns or incorporated for horns into existing horn systems. Strip half an inch of insulation from one end of a short wire of any color, a brown wire and wires attached to the fuse holder. The short wire connection between the positive battery terminal and the internal fuse holder, the wire twists carefully, yet firmly, together to create a solid connection. Connect the brown wire in the same way to the other terminal of the fuse holder. Screw and spiral to ensure maximum connection. Wrap the spiliks with the electric strip to make it obsolete. Remember to insert a slow blow fuse into the fuse holder. Connect the other brown wire with brown wire to the relay trigger wire. Connect the other relay coil terminal with brown wire to the horn switch. Ground horn switches in fuel gauge brackets with black wire. Attach the beep to the relay power terminal. Fxcix the horn to the golf cart and land on the chassis. The switch presses the horn to test the horn. The completed circuit will activate the relay, which will power the horn. I have 2 limited switches. 1 6v DPDT relay, and engine. Using a timer, I want to reverse the direction of the engine when it reaches the corresponding limit switch. Someone can help me make my connections, I've got the number of all terminals so you can just tell me 3-5, 6-2, etc. Thank you very much in the first place, the dimensions of a golf cart can vary slightly depending on the manufacturer, model and added options. The average size of the golf cart is just under 4 feet wide just under 8 feet in length. A Yamaha Drive golf cart has dimensions of 91 inches long and 44 inches wide. The same basket maintains this width with a back seat, but its length increases to 108 inches. The car cub has a history of standardized model baskets 48 inches wide 91 inches long, and the model with a rear zinc is 48 inches wide 104 inches long. The six-seater basket of the XRT limo car cub has the same width as 48 inches but a length of 144 inches. Length.
