New to OSB and video recording in general. Glad to have a place to discuss issues I picked up cheap USB video recording device off Amazon with the intention of transferring my aging VHS tape to digital format. One I've got says REDGO on it, but it seems there may be a few vendors selling the same device with a different brand. What they subscribe to is that they are listed as an AV device to USB2.0 and come with the same Honestech software. When I plugged it into a laptop running a winning 10 pro, the device manager shows the AV to USB2.0 listed under cameras and audio, video and game controllers. When I Honestech software, the device is shown on the video device, and the audio device... However, the software does not show any video. When I run OSB, no device is mentioned in the video recording device configuration. When I plugged it into an old laptop running Windows XP, I was able to see and take video of the VCR using honestech software (don't try OSB on that machine)... So I know the hardware is working. I tried running Windows XP on VirtualBox in my Winning 10 Cars. Everything loaded up just like the XP device, however it doesn't show any video when I run honestech software. My preference is to record audio and video in my winning 10 machines using OSB. Anyone has ideas as to why the device won't be listed as a video recording device in OSB despite being on the device manager? Perhaps try 32-bit OBS, the manufacturer may not offer 64 bit drivers. I will try the 32-bit version. The manufacturer did not provide any drivers. In fact, the directory on the small CD that came with the device is HW007_NoDriver. The driver is loaded from Microsoft. When I look at the device manager event viewer, I see this warning: the USB deviceVID_534D PID_0021&MI_00&MI_0016&1a9ce652&0&0000 did not migrate due to partial or ambiguous matching. Latest Device Sample ID: USBVID_2466&PID_8005&MI_0016&1293f8b3&0&0000 Class Guid: {4d36e96c-e325-11ce-bfc1-08002be103 18} Location Path PCIROOT(0)#PCI(1400)#USBROOT(0)#USB(4)#USBM(0) Migration Rank: 0xF000FFFFFFFF0023 Present: false Status: 0xC0000719 I returned the REDGO device. I am currently looking for a composite to HDMI/HDMI recording device option. ClonerAlliance Evolution seems to be all-in-one solution by providing composite input and USB or MicroSD card recording. Anyone have thoughts on ClonerAlliance products? There is a better way to do this but it will require hardware to work. Get the composite to the HDMI adapter and then have a recording device with HDMI in. View great video! and learned some stuff along the way about nyquist-shannon & de-interlacing. Yve has already bought the AV to HDMI and will see if I can output to the TV. Then I buy one of these hdmi to the USB adapter to use the old fashioned camcorder as funky webcam lo-res. Arranged! Perhaps there is a simpler explanation for this problem. That Windows 10 Privacy Settings may not be set allowing OSB to access the AV device to USB2.0. Go to computer/privacy settings and select camera. Scroll down to 'Let desktop apps have access to your camera'. Set it to 'in'. 'On'.
