Absolute value mathcad

Absolute value of a scalar • $\text{abs}(z)$ - Returns the absolute value of a scalar or the magnitude of a complex number z . Arguments • z is a real or complex scalar. Absolute Value/Determining Operator Description Returns the absolute value of a scalar or the magnitude of a complex number. This operator can also return the norm of a column vector or square matrix. Operands • x is a scalar and complex number, a column vector, or a square matrix. Additional Information • The column vector or square matrix can be dimensionless or contain compatible units. • If the column vector or square matrix contains compatible units, the unit of the resulting determinant depends on the unit system of the worksheet. • To calculate the size of each element in an array, select the array and insert the vector operator. Otherwise, the square root of the sum of the squared quantities of the elements of the array is returned. • To calculate the determinant of an array, PTC Mathcad first performs a LU factorization of the matrix. Intel's BLAS/LAPACK libraries are used. Vigneshwar3991 (Mechanic) (OP) 29 Oct 12 02:52 I'm converting my C program to Mathcad version. I need to convert the fabs operator into program C with an equivalent in Mathcad.Guyyss... pleeaasee help me get rid of this problem..
