Featured Photos (65) Walking Video Ford's original two-seater Thunderbird, inspired by Chevrolet's Corvette, went into production on September 9, 1954. Like Chevy's fiberglass sports car, a 1955 T-bird with a steel body. Except for some early applications, removable fiberglass hardtop is standard, as well as roll-up windows and V-8 power, all features inaccessible to Corvette customers early. The Thunderbird V-8 was a 292 cubic block of Y atop a four-tube carburetor. The output was 193 horsepower with a standard 3-speed manual, and 198 horses when the Ford-O-Matic automatic was installed. More power increases followed in 1956 as the standard 292 V-8 was rated at 202 horsepower and the optional 312 cid Y-block appeared with 215 or 225 horses. Optional double carburetors were introduced later that year to help 312 reach 260 horsepower. Additional updates for 1956 included available removable hardtop openings and a continental-style spare tyre mount at the rear. Ford officials initially threw themselves into building 10,000 Thunderbirds for 1955. The final score is 16,155. After a slight dip to 15,631 in '56, production of the last - and by many heads of the best - two-seater T-bird reached 21,380 in 1957. Thunderbird's spare tire returned to the trunk in 1957. The extra length in the back was the fins with the outer buckets on top of each rear quarter, thanks to legendary designer Frank Hershey. Both the 292 and the 312 Y-block V-8 returned for 1957. Base E-code 312 is rated at 270 horsepower; by adding a camera NASCAR kit increased production to 280 horses. It was also briefly offered in 1957. With a NASCAR camera, this blown Y-block produced 340 horsepower. Click here to read Hemmings Motor News's Buyers' Guide to Ford Thunderbird 1955-1957.
