Chapter 6 a tour of the cell worksheet

Thank you for joining us! Chapter 6: A tour of the cell Name _____ Period _____ Concept 6.1 Biologists use microscopes and tools biochemistry to study cells 1. The study of cells has been limited by their small size, and so they were not seen and described until 1665, when Robert Hooke first looked at dead cells from an oak tree. His modern, Anton van Leeuwenhoek, crafted lenses and with improvements in optical aids, a new world was opened. Magnification and resolution power limit what can be seen. Magnification is the relationship between an object's image size and its real size. Resolution is a measure of the clarity of the image; it is the minimum distance two points can be separated and still distinguished as two points. 2. The development of electron microscopes has further opened our window on the cell and its organelles. What is considered a major drawback of electron microscopes? The methods used to prepare the sample kill the cells. 3. Understud the electron micrographs in the text. Describe the different types of images retrieved from: electron microscopy scanning (SEM): The responses may vary, but must describe the 3D component in the sample image. transmission electron microscopy (TEM) Responses may vary, but should mention that this type of microscopy profiles a thin part of a sample, resulting in different views of the prepared cells. 4. In cell fractionation, whole cells are broken up into a blender and this slurry is centrifuged several times. Each time, smaller and smaller cell parts are isolated. This will isolate different organelles and allow for the examination of their biochemical activities. Which organelles are the least isolated in this procedure? Ribosomes Concept 6.2 Eukaryotic cells have internal membranes that divide their functions 5. Which two domains consist of prokaryotic cells? Bacteria and Archaea 6. A big difference between prokaryotic and eukaryotic cells is the location of their DNA. Describe this difference. In a eukaryotic cell, most of the DNA is in an organelle called the nucleus, which is bounded by a double membrane. In a
