Golf clash ring guide

Golf Clash could be so easy... If the wind doesn't pay for our hits. If you can't deal with the wind properly in the Golf Clash, you have almost no chance of winning. Shouldn't be a problem, okay? There are dozens of endless wind charts and guides out there explaining this to you. And exactly that's the problem - if you play Golf Clash you don't want endless lists, charts and whatever it's because I worked an easier way, how you can deal with the wind without a guesser and without half a library with you 📖 In this guide I'll teach you everything you need to know about the wind golf clash and how to adapt properly (plus how accuracy and other stats are part of it) and finally I'll forge To have knowledge of a simple formula that allows you to play golf clash without a page next to your screen! Golf Clash Wind Charts & How the Wind Works First, let me show you the theoretical things that you understand how the wind works in the Golf Clash. How the wind works gold clash wind randomly spawn at every step and there's no fixed pattern, so you have to learn to adapt to the wind. The wind itself diverts the ball away from the set position depending on the wind, the number of bounces and how hard the wind is... Just like actually ☺ How to Customize So what you have to do to fight the wind moves your landing point in the opposite direction to win and the wind directs the ball to the point you want it to land. You basically say to the wind: No, I don't want the ball at A-point A, I want it to land at point B, but secretly you want it to land at point A???? So the easiest way to do this is to spin the view so wind points straight north, it will help you right in the right direction without guessing. How to use it: (A) is my desired landing point and wind adjustment I need to move it (B) Looking at the image above here's what you would normally do: You want to land the ball at point A You spin the camera look so the wind faces straight north (makes it easier to adjust) Then check your club and wind chart to know how much you usually have to adjust Now move your landing point B Wow... it's a lot of work and you have to repeat that all the time?! ???? The only reason you need wind circuits is because you need to know how far you need to adjust. That's what wind maps tell you, nothing more. You have to look for the club you use and wind you have and they will tell you the number between 1 and 5. This number interprets the rings you see, each ring is one number. If you see the number 1.5, you need to move to the center of the orange ring, if you see 3, it's the outer line of the blue circle and so on... Why I Don't Like Wind Charts Golf Clash Ok, Title May the wrong impression, I have a lot of respect for people who took the time and effort to get wind schemes with hundreds of hours of trying! They basically show you how much you need to adjust to the wind of the Golf Clash. Here's what such a wind chart looks like: I just don't like to check these charts all the time, it makes me enjoy the game much less ... and if I don't control them I miss the spot too many times and lose (still don't enjoy) so that's why I'm just trying to put all these numbers into a simple formula (or rather said, fist rule). Golf Clash Wind Chart, which is actually not a wind chart So how dare I say that I have an easier way when all these people out there are putting so much effort into their wind charts? I notice one thing when putting all the values in relation - they don't depend on the club, they depend on the accuracy of the club. So you don't have to be that hard, you just need to know the accuracy of your current club (which isn't that hard). Now you need to check this chart once here: So, let's say you have a club with 20 selected accuracy, the value of each ring is 2.6. That's how much the wind-filled ring compensates. Now, if the wind was 2.6, you'd have to move a full ring. If the wind was 3.9, you'd move one and a half rings, etc. Sounds a little complicated at first, but it's easier than you think, especially if the amount of linear for every 10 point accuracy is worth 0.2 wind per lap. This is the only value you need to remember, and you can easily calculate it in a few seconds and no longer need a wind scheme! I'm also sure this is how the wind has applied to the game ☺ Please remember two more things if you use it: You have to land the perfect hit 100% to make the adjustment take effect - If you don't put a strike a little bit on your ball to the ground somewhere else. If the wind is bigger than 7 you should give your ball a little curl in the opposite direction to the wind - it helps especially if your ball bounces a few times. Is that going to help? Is that pointless? Do you have any questions? Just drop the comment below ☺ Although this is not the only way into the wind of your shots, the Ring method is by far the most popular. Using the rings in your cursor guide you can pretty accurately adjust the wind and get your shot to the ground where you want it. It comes down to calculating how much MPH each ring is worth based on the accuracy rating of the club you use for your shot. I'm actually not going to go in much more detail than that because there are a lot of great guides out there that can teach you step by step how to learn and master this technique. If you do not already know about the use of the round method, I would urge you to pass every at the bottom and at least give it a chance. While it may take some time to learn, it simplifies the game if you can hang on to it. The first step is to look at this detailed guide (not sure who created it, but if it's for you please let me know that I can't give you credit). This concerns adaptation and time management, which are both key elements. If reading is not the way you like to learn, be sure to check the video resources at the bottom of the page. They're all worth at least one view. Finally, if you do, the amount of numbers you need to know can be overwhelming. If you're having trouble tracking the circular values of all your clubs, be sure to look at the wind scheme creation tool, which can make it a little easier. If this tool is not to your liking, the Golf Clash University Wind Ring Calculator is worth checking out as well. Golf Clash Tommy - Wind Guide - Learn Circular System! Before shooting, players must always take responsibility for the wind. Basically, players need to adjust their shots according to the wind. This is done to throw a good challenge on the player. Has it ever happened to you that even with a perfect shot, your ball goes places? The wind is playing a strong role here. Fortunately, there are many ways to cope with the wind of the Golf Clash. Wind schemes are also available to help players get through holes with different wind behaviours. How to use rings in golf clashHow many ways to cope with the wind, as mentioned above. The most effective way to deal with the wind is through a circular method. Or at least this is the most popular method among players. We will discuss how to properly use rings in the Golf Clash. Using this article, we take a look at the ring method. Apart from discussing which rings are in the Golf Clash, we will also explain how to use the ring method. So, if you're also interested in an effective way to deal with the wind of the Golf Clash, make sure to give this article a good read. What are the Rings? Before learning how to use rings to deal with the wind of a Golf Clash, it is important to first understand what the rings are. Here's a picture of what the rings look like in the Golf Clash: As you can see clearly these are several rings that circle around the shot. These rings are your cursor. They are responsible for adjusting your ball landing. But you can also use these rings to adjust the wind in your shot. If you're good enough, you can land your shots wherever you want. Basically, the rings will tell you where your ball will land first. The player should place his ring before the shot. Otherwise, he could ruin his chance. When the match starts, adjusting the ring is one of the first things a player has to do. How to use the ring method? To combat the wind of the Golf Clash, many players like to try the ring method. Players with these multiple rings can Wind. Based on each club's accuracy, you have to determine how many miles per hour (MPH) each round is worth. Take, for example, a popular club known as sniper. A sniper is a pretty solid club because it can have maxed-out accuracy (100 as shown in the picture). For a simpler understanding, we take this as an example to show how you can use the circular method. Additionally, here's a diagram that explains how to use the accuracy of the way to determine the ring's MPH. Currently, we are only interested in the last number 100 = 1 = 5. Maybe you thought 100 would show the sniper's accuracy. But what's the point of a yard circle and a max ring here? Number two, 1 means wind per circle. This means that if you're aiming for a shot, each lap is equal to 1 mile per hour. The third number indicates an external number, which basically means that outside 5 rings, you get 5 miles per hour. Similarly, each club has different values according to its accuracy value. For example, if a club has 60 accuracy, each circle equates to 1.9 miles. You can use the above image to determine the values of each club. Let's set an example again for the sniper. If each circle equals 1 mile per hour, then outside the most inner circle (Yellow) equals exactly 1 mph. Also outside the next circle equals 2 mph and the next 1 mph. After this pattern, each ring is increment 1 mph. At least outside of 5 rings, it equates to exactly 5 MPH. It's cool and everything, what about the wind? Now comes the real part. We have taken 4 simple steps on how you can use rings to fight the wind of the Golf Clash. So, let's start!1. Properly customize your ShotMost thing about the game is to customize your shot. You have to aim to keep the wind off. You can rotate the screen to check. Correctly set your ball to spin, and check for correction. Adjust until you have the perfect position. Similarly, immediately after adjusting your shot, you will have to adjust your shot according to the wind. This can be done by turning the screen around until you get the wind straight north or south. This ensures that you have an accurate wind direction. Set a mile per wind Follow all of the above procedures. Check your club's accuracy and then continue checking for miles of wind on your ring. You can check the circle/qualifier to determine the exact number of miles per wind. The final step is to take a shot. Make sure it's a perfect shot. When you do this, you will see magic happen as if you had successfully used the ring method to fight the wind. If you have trouble hitting the perfect shot, you can check out our guide on how to hit the perfect shot. Conclusion You have now successfully learned how to use rings in the Golf Clash. Make sure that you follow all the instructions. Love play ring method because it is quite easy to execute. You can take a look at our guide to wind charts, which should help you learn how the wind works in the Golf Clash.We hope you will find this guide useful when we've tried our best to identify the rings of the Golf Clash.
