Reinstall the battery and replace the bottom cover and battery door, then place Roomba on the home base® to try to recharge again. If the message persists, contact iRobot Customer Support Service. One of the most common concerns of Roomba users is Error 5. There are a number of reasons for this error. In this post, we explain all possible causes and solutions to the Roomba 5 error of the iRobot robot vacuum cleaner. When Error Indicator 5 appears on your Roomba robot. This means that a loading error has occurred in your Roomba robot vacuum cleaner. This type of error usually occurs when your Roomba battery is not in perfect condition. Roomba Error 5 - Loading Problem According to our robot's series, it will display load error indicators as follows: 900 standard robots: the robot says loading error 5. Open the iRobot Home app for help. 600 and 800 series robots with Wi-Fi connection: the robot says charge error 5. Open the iRobot Home app for help. 500, 600, 700 and 800 standard robots without Wi-Fi. The robot says, loading error 5. How do I fix the 5 loading error in Roomba robots? To resolve the charging error 5, follow these simple steps: Make sure the battery comes into contact with the plates. If you have just placed a new battery, make sure you have removed the yellow strip that the batteries carry in their connections. Make sure the metal plates in the battery compartment are not very crushed. Clean battery contacts with a dry cloth. Replace the battery and check to see if the error persists. In this case, it is more than likely that the battery has reached its end of life. Remember: when was the last time you changed the battery? If about 2 years ago choose the battery for Roomba most suitable for you and replace it. Your Roomba will work perfectly again, and the 5 charge error will disappear. Maintenance Roomba Error 5 First of all, you must carefully and carefully remove the yellow ring that has the battery. Nothing hinders battery contact by removing (with the 700 series and the 800 Roomba series) the two screws you will see at the base of the Roomba robot. Once this step is complete, we have to clean the battery contacts very carefully. It should be made with a clean, dry cloth. With this step, the battery should vary because it is probably full of dust. Don't forget to do this with delicacy because they are sensitive elements. After that, record all the load contacts from the tether base and itself that there is no accumulation of dirt or dust. If the existence of dirt or dust is positive, positive, must be removed with a rubber brush to remove waste from the load contacts. The step has been done in a compassionate manner since then, as mentioned above. It is treated with sensitive elements. How do I fix the Roomba 5 error (left)? This error occurs because one of Roomba's two side wheels is not running well. Make sure there is no obstructing or preventing the rotation of the two side wheels. Eliminate the factors that cause this obstruction. If the problem persists, check that the wheel is in a correct state. Alternatively, replace the corresponding wheel with a new Roomba wheel. How do I fix the Roomba 5 error (right)? Here it will be the right wheel that can not turn well. Make sure there is nothing to obstruct it. Once the problem is eliminated, change the robot's location and press the CLEAN button. If it is not resolved, you will need a new right wheel. If this happens, you are on an occasion when your Roomba does not load, you may be in this problem. You can solve it quickly yourself, first. Don't get nervous. Everything has a solution. In the face of this problem, the battery and charging contacts must be checked that everything is well connected to each other and to the current so that the electricity flow is properly transmitted. I've been struggling with Roomba charging 5 error for the last few days, but haven't found a solution yet. I have tried several guidelines from various troubleshooting forums to solve this problem. They provided a lot of general information and no technical data that they could have obtained by measure. I tried there provided suggestions like changing the battery, changing the power supply, reset by pressing the place and dock button for several seconds, plugging into the Roomba directly not through the home base and also tried cleaning, pulling the metal thing under the battery for the battery contact problem; but nothing worked for me. That's the condition. When I plugged it into the transformer, the faster flashing light load started in a systematic way. But half an hour, it had come ERR5, or Charge Error 5, and the Roomba's troubleshooting light flashed 5 times. Don't throw your Roomba or throw it through the house like a flying disc. Before you panic don't worry, this can be corrected! There is enough data to identify the failed component. Therefore, who would like to save time and do not want to give effort behind the defective device, can buy a robot vacuum cleaner for dog hair, this can be a great relief for a household with pets. Load errors1 or One1 charge error The Blink error message means the battery is not connected yet. You'll probably need to unscrew the battery cover and check if anything clogs the battery contact points. Make sure the battery is placed correctly and the yellow battery pull tab has been removed. You may need to scrape the With a knife to really get the crud/carbon out so that the metal can make contact.2 appropriate flashes or TwoThis charge error charge error 2 means your Roomba has load error and it may need to cool down for at least an hour. The Roomba will also have to load completely in an AC environment to ensure that it doesn't overheat once more.3 Flashes or Charge Error ThreeThis that the error says the Roomba has a charge error, which can be resolved by reset and reloading it.5 Flashes or Charge Error FiveThis message Roomba has a charge error can be resolved in several ways. One way is to completely remove the pull tab from the vacuum and also by resetting the Roomba and charging it completely until the clean light goes green.6 Flashes or Six-rate charge errorWhen you see this charge error, it means the Roomba battery has overheated. This can be resolved by letting it charge in an AC environment or letting it cool for about an hour.7 Seven Flashes or charge errorThe seventh charge error you'll see says the battery on roomba isn't cooling properly. If you let the vacuum load in a cooler environment and let it cool for an hour and it overheats again, it is probably defective and will need to be replaced.8 Flashes or charge error EightThe Roomba is unable to create contact with the Lithium-Ion battery. The battery may be damaged or simply need replacement. 9 NineSimilar charge flashes or error to charge error 8, and the same Lithium-Ion battery solution may need replacement. If none of the above works, and you still get the Roomba 5 error, then you should read this full scan on Roomba error codes. Final phrasesThis 'Roomba 5 load error' is a very common problem, which is why it is seen that in the month 1900 people search in Google by typing this problem. On the other hand, roomba and manufacturers continue to sell rechargeable batteries that are not good even if they are not aware of the problem. Save hours of online search, querying about Quora or wasting money on unnecessary repairs. We can help you solve all Roomba troubleshooting problems. Who am I: I am a home improvement specialist, cleaning expert, product examiner. Why I write: To write a blog that broadens the horizons of readers and offer new solutions that they can apply to their home. For whom I write: My family, my friends, my neighbors, myself, and above all you. Where do I write? homepplx.com, one focused solely on giving suggestions for improvement from the inside. Suggestions. Suggestions.
