Need to take care of your cows or villagers who are imprisoned alive and contained in Minecraft? The best way to keep them inspected is to build a fence or wall high so that nothing can escape. We show you how to make a fence in Minecraft along with gates and walls. We add the walls to this guide because, like a fence, they waist-high by default. Once you start sorting out the walls, the resulting structure isn't really solid — there are openings between each post, creating what resembles an open castle. You can use wooden doors to include the structure of the walls. What you need Wood - Go find yourself a bunch of trees and cut them out. Your lumberjack skills will cause a little block of logs (Survival Mode) scattered across the terrain you need to gather. You can use any tool to cut trees — even your pullers — except swords. You can also use any type of wood to build your fence, although you will want to stay consistent for appearance. Here's your wooden choice: Acacia Birch Crimson Dark Oak Jungle Oak Spruce Clay – You need this for Brick Walls. Clay lives underwater. These blocks are mostly grey split with various grey hues. Bricks and other Stones – If you do not want Brick Wall, you can use other ingredients. Some of these you can find naturally while others need crafts: Andesite Blackstone Cobblestone Diorite End Stone Brick Brick Granite Nether Brick Let's Brick Let's start by making a wooden fence! Create the First Wood Plank block, you need wood Planks built from any log you collect from the tree. You can also use stripped wood. Step 1: Open your inventory (shown above) or Craft Table. Step 2: Put one (1) wooden block into a craft grid. Step 3: Drag four (4) resulting Wood Plank blocks into your inventory. Step 4: Repeat these steps to get all the Wood Plank blocks you need. Create a block of Warwood Boards (Java Editions only) You need it if you want to make a Warped Wooden Fence in the Java Edition. The only material here is the Stem Warped logs, which you can collect from the Warped Forest in the Netherlands. Step 1: Open your inventory or Craft Schedule. Step 2: Place one (1) Batang fight log block in any square. You can also use stripped wood. Step 3: Drag four (4) Warped WoodEn Plan Blocks into your inventory. Step 4: Repeat these steps to get the Wooden Board blocks fighting you need. Make Wood Here is the second ingredient you need to make a fence. 1: Open your inventory (shown above) or Craft Schedule. Step 2: Place one (1) block of Wooden Board at any square in the upper row. Step 3: Put one (1) block of Wood Plank directly below in the second row, as shown above. Step 4: Drag four (4) Stick into your inventory. Step 5: Repeat these steps to get the Sticks you need. Create a Wooden Fence You can use any Wood Plank block to build a fence, even Warped Warped Plank blocks in the Java Edition as previously directed. Step 1: Open your Craft Schedule. Step 2: Place one (1) Wooden Board Block at the top and square center in the left column. Step 3: Place one (1) Stick each in the upper and middle squares in the middle column. Step 4: Place one (1) Wooden Board Block at the top and square center in the right column. Step 5: Drag three (3) Resulting fences into your inventory. Step 6: Repeat these steps to get the Fence you need. Make Wooden Doors You can definitely jump over your new fence, but wouldn't it be easier to just walk through the gates? Sure it will. Step 1: Open your Craft Schedule. Step 2: Put one (1) Stick each in the upper and middle squares in the left column. Step 3: Place one (1) Wood Plank Block at the top and square middle in the middle column. Step 4: Put one (1) Stick each in the upper and middle squares in the right column. Step 5: Drag the resulting Gate into your inventory. Step 6: Repeat these steps to get the Gates you need. Make The Dutch Fence Now let's be real and explore into Nether to get the ingredients we need to make the Dutch Fence. You need Netherrack to create Nether Brick, which in turn makes Nether Brick Block. Both are required to make the Dutch Fence. While the colours are hard to see below, Netherrack is a mixture of red color from brown to light pink, as shown above. You need a pickaxe to mine this skull-patterned ore. There are three stages to build the Dutch Fence. First, we need bricks. This means you need filo and fuel. Part 1: Create Nether Bricks Step 1: Open your flea. Step 2: Put Fuel in the bottom square. This can be coal, charcoal, wood - whatever you have that burning. Step 3: Place the Netherrack block in the upper square. Step 4: Drag the resulting Nether Brick into your inventory. Step 5: Repeat these steps to get the Nether Brick you need, or simply put more than one block of fuel and Netherrack into the compartment. The fold will continue to create Nether Brick up to the sources of the hug. Part 2: Make Nether Brick Blocks a simple Brick won't be enough. We need to cram some together to make a block. Step 1: Open your Craft Schedule. Step 2: Put one (1) Nether Brick each to the top and square middle in the left column. Step 3: Place one (1) Nether Brick each to the top and square center in the middle column. Step 4: Drag the resulting Nether Brick block into your inventory. Step Repeat these steps to create all the Nether Brick blocks you need. Part 3: Make the Nether Fence Finally, with both Nether Bricks and Nether Brick Blocks in hand, eventually we can make a fence. Step 1: Open your Craft Schedule. Step 2: Place one (1) Nether Brick Block to the top and square middle in the left column. Step 3: Put one (1) Nether Brick each into the upper and middle squares in the middle column. Step 4: Place one (1) Nether Brick Block to the top and square in the middle in the right column. Step 5: Drag six (6) Nether Brick Fences into your inventory. Step 6: Repeat these steps to create all the Nether Fences you need. Since we play with Nether, why not learn how to make Nether Brick's wall too? Again, they're low as Fences with prominent but sturdy posts all over. Create a Nether Brick Wall Step 1: Open your Craft Table. Step 2: Place one (1) Nether Brick Block to all three compartments in the bottom row. Step 3: Place one (1) Nether Brick Block to all three compartments in the middle row. Step 4: Drag six (6) Nether Brick Walls into your inventory. Step 5: Repeat these steps if necessary. Now let's run the rabbit hole further and learn how to make a standard Brick Wall. Again, they waist-high by standing out posts and building solids. Create a Brick Wall This requires three parts: Create a brick, create a Brick Block, and then a real Brick Wall. To make bricks, you need Clay living underwater. Part 1: Create Brick Step 1: Open your falter. Step 2: Put Fuel in the bottom square. This can be coal, charcoal, wood - whatever you have that burning. Step 3: Place one (1) lump of clay in the upper square. Step 4: Drag the resulting Brick into your inventory. Step 5: Repeat these steps to create more bricks, or simply insert multiple Fuels and Clay into the faltering grid. The furo will continue to make Bricks up to the sources of the sledder. Part 2: Create a brick block Now we need to make Brick Blocks because this game is all about craft. Step 1: Open your Craft Schedule. Step 2: Place one (1) Brick each to the upper and middle squares in the left column. Step 3: Place one (1) Brick each to the upper and middle squares in the middle column. Step 4: Drag the resulting Brick Block into your inventory. Step 5: Repeat these steps to get all the Brick blocks you need. Part 3: Create a Brick Wall Finally, we can make a Brick Wall! Step 1: Open Your Craft Table Step 2: Put one (1) Brick Block each into three compartments in the upper row. Step 3: Put one (1) Brick Block each into three compartments in the middle row. Step 4: Drag six (6) Brick Walls into your inventory. Step 5: Repeat these steps to get all the Brick Walls you need. Note: You can replace Brick Block in Step 2 and Step 3 with Andesite, Blackstone, Cobblestone, Diorite, Final Stone Brick, Granite, Sandstone, Bricks. You can also use Mossy and Red variants, such as Mossy Cobblestone. As shown above, you can fill in Row 2 and Line 3 of the carpentry grid to create a Wall in addition to the Line 1 / Line 2 methods in our direction. The point is to have two continuous rows filled with blocks. That's a lot of money. craftsage right? Now we can put it all on Overworld. How to put a Fence or Step 1 Wall: Make sure your Fence or Wall is on the Hotbar and selected for your Main Hand. Step 2: Look directly at the ground where you want to put the Fence or Wall first. Step 3: Do the following to put your first Fence or Wall: PC - Right-click on the target area. Console - Press the Left Trigger button while facing the target area. Mobile Phones – Tap the target area. Step 4: For both Fences and Walls, all you'll see is one post, as shown above. Target the next block and place your second Wall or Fence. You will now see two posts accompanied by two boards of landing (wood), as shown below, or lower walls (bricks). Step 5: Continue adding parts of Fences or Walls until you create the acryption area. Tip: If you want to remove Fences or Walls quickly. save only the Left Trigger or Right-Click Mouse button down while moving. You'll delete blocks like machine guns. Step 6: To add Wooden Doors, demolish one fence or Wall block and replace it with a Wood Gate block. You can open the door by doing the following: PC - Right-click on Wooden Doors. Console - Press the Left Trigger button while overlooking the Wooden Door. Mobile Phone - Tap on Wooden Doors. Arrange fences or walls of your fence or walls do not need to remain waist-high. Instead, you can conclude this block to create a higher container for animals or captured villagers. Step 1: With Fences or Your Walls now selected in Hotbar, target the corner post, and do the following: PC - Right-click on a Wooden post or Wall. Step 2: You'll now see a Wooden post or Wall twice as high, as shown below. Follow the previous steps to build your Fence or Wall as usual, only you are at a higher level. The result is fences or Walls that reach the top of your virtual head. Don't build a second-level fence or Wall block straight at the entrance — you won't fit through the opening since you have two high blocks. On the other hand, build a third-tier fence or awning Wall block, as shown below. Unfortunately, we forgot to add Skeleton's skull to the awning before taking a screenshot ... Here are the Wandering Traders appreciating the skills of building our Brick Wall. Our notice adds Wooden Doors to include this space. Editor Suggestions
