8.2 assessment biology answers

Pigments such as chlorophyll are required as they capture the light energy used for photosynthesis. Pigments such as chlorophyll absorb certain wavelengths of light. There are two forms of chlorophyll used by plants: chlorophyll A and chlorophyll B. These two types absorb light well within the blue-purple and red parts of the visible spectrum but do not absorb light in the green part of the spectrum; Therefore, chlorophyll gives the plants their green color as chlorophyll reflects green light. You can help us by modifying, correcting and updating this answer. After updating this answer you claim an answer that you will have 24 hours to send in drafts. An editor will review the submission and either publish your submission or provide feedback. Next Answer Chapter 8, Photosynthesis - 8.2 - Photosynthesis - 8.2 Evaluation - Page 234: 1b Previous Answer Chapter 8, Photosynthesis - 8.1 - Energy and Life - 8.1 Evaluation - Page 228: 3 Earth Sciences Earth Science PG. 228 1. . Two categories of seismic waves are body waves (P and S) and surface waves 1 answ 2. The epicenter of the earthquake is located using data taken from at least three different seismic stations. The time that first arrives at the P Wave station is then subtracted from the time that the first S wave comes. This value could then change into a distance using a travel time diagram. This distance means that the epicenter is far from that station. A circle is drawn around each seismograph station and circles are found where the earthquake epicenter is likely to be found. 1 answ 3. Earthquakes can be measured by their intensity (or levels of damage done) or magnitude (amplitude of seismic waves). 1 answ 4. P Wave, S Wave, Surface Wave 1 answ 5. Push the P waves and pull the rocks in the direction of the journey. Their velocity is larger than the velocity of s waves. S waves move particles of material at the right angles in their direction of travel. 1 answ 6. In the concept, a seismological weighs that is suspended from the support associated with the base. When the base shakes, the weight remains constant which allows it to act as a reference point. Earth's movement can then be compared to weight and recorded on a steady drum. 1 answ 221 page 232 Biology Biology PG 234 1a. Photosynthesis requires chlorophyll-like pigments because pigment molecules are able to absorb light energy from the sun. 1 answ 1b. Chlorophyll can absorb blue-purple and red areas of the visible spectrum when doing photosynthesis using light. Since yellow is not the color in which chlorophyll is normally very well absorbed, there is only a little energy absorbed by plants. Photosynthesis can occur and the plant will grow. However, its growth will not be optimal at all. 4 answ 2a. See Explanation 2 answ 2b.2 answ 2c.2 answ 3a.3 answ 3b. To see For the solution. 1 answ 4. 2 Answ 228 Page 241 241
