# How to lock cells in google sheets ipad

Google Sheets makes collaborating with colleagues on spreadsheets easy with easy sharing options. Unfortunately, when using the same spreadsheet is so simple, you can also easily or inadvertently change the critical formulas on which the spreadsheet is based. Actions can drive the entire sheet into chaos. The good news is that Google Sheets gives you a lot of control over permissions for users. Cell locking is a great way to protect spreadsheet formulas from unauthorized changes, ensuring that no one can edit its features. If you're an Excel user, you might be interested in another article about blocking Microsoft Office Excel formulas, but locking spreadsheet cells in Google Sheets isn't done the same way as in Excel. Protecting formulas in Google Sheets doesn't require a password. Therefore, you don't have to enter a password to unlock cell protection to edit your own spreadsheets. Regardless, Google Sheets doesn't give you as many blocking configuration options as Excel, but they have more blocking formulas, which in most cases is more than enough. The Protected Sheets and Ranges tool blocks a cell or range of cells from all edits, and has other custom options. Lock full sheetIf you only want to allow other users to view permissions (not edit), the easiest approach is to lock the entire worksheet. First, click the spreadsheet that contains the formula cells that you want to lock. To protect all cells in a spreadsheet, click the down arrow on the sheet tab next to the sheet name in the lower-left corner of the spreadsheet, and select Protect Sheet, which opens the Protected Sheets and Ranges dialog box, as shown in the following exampleAlternatively, you can also select Protect from the Tools drop-down menu. This opens the Protected Sheets and Ranges dialog box, as shown below. In the Protected Worksheets and Scopes dialog box, follow these steps:Press set permissions to open further editing permissionsClimit who can edit this range of the option buttonThen select only you from the drop-down menu. Tap Done to lock the spreadsheetIt will block all cells of the worksheet for anyone you share it with. If someone tries to modify the formula, an error message opens that says: You're trying to edit a protected cell or object. Lock the selected cell or range of cellsProtect formulas in different cells, you can select a range or select one cell at a time if they are spread out in different places on the worksheet. Note: If you select which is already protected, the new entry will not work, leaving the cells editable by people with edit permissions. Before you can select a new range of cells or cells to protect, you must first check all currently protected cells. If you need to lock only one or more formula formula cells Google Sheets, follow these instructions: Select the cell or range of cells you want to protect. Click Data in the top drop-down menu, and then select Protected Sheets and Ranges. In the Protected sheets &amp; ranges settings, select Add sheet or range. Create a name for the protected range of cells or cells in the top box. Confirm the cells specified in the second field, which is already displayed if you selected them in the first step. When you're done, click Set Permissions. Select protection options in the Scope Editing Permissions window. The warning option is a soft protection setting that allows editing, but warns the user that it is not intended for editing. The restricted option lets you choose who can edit a range of formula cells. Click Done when you're satisfied with your settings. The new protection setting now appears in the Protected Sheets &amp; Ranges settings on the right side of the worksheet. Change/edit locked cell ranges and their settingsAs an authorized editor, you must ask permission to edit protected cells and formula ranges by contacting the owner. As an owner, you can edit protected content by default, and you can also edit existing protection settings. If protected cell ranges don't work and you need to edit them or find overlapping cells (as previously mentioned), use the steps below. To edit a protected entry, click the item field, and the settings options appear. If you've already closed the toolbox, go to Tools -&gt; Protected Sheets and Ranges. Press Cancel in the toolbox if you want a new entry and will return to the protected list as shown below. If you selected the above entry for editing, you will receive a new toolbox window that displays the entry name and range of cells, as shown below. If necessary, you can customize cell names and ranges here. To get user permissions, click Change permissions. In the Scope Editing Permissions window, adjust the user settings as needed. If you select Custom above, choose who you want to edit. You may need to repeat steps 1-3 above for other cell range entries, if applicable. If you want to delete an entry, select it from the blocked list, and then click the trash can icon to select it to delete. A confirmation window appears to authorize the deletion. This way, you can ensure that formulas in Google Sheets spreadsheets are not deleted or modified by unauthorized users.
