Xirrus wifi inspector windows 10

The popular Wi-Fi scanner Xirrus Wi-Fi Inspector has finally reached version 2.0. The release brings support for Windows 10 and introduces the first version of Mac. Compatibility improvements include new support for the 802.11ac Wave 1 and Wave 2 Wi-Fi standards. There is also a network provider column to determine the manufacturer of each network device. Overall, it's a great tool that displays a lot of information about the wireless networks around you. There are a lot of gaps in functionality (it can create attractive graphs, but there is no way to save them), but there are also some unexpected extras (simple troubleshooting tests), and the program is still a similar scanner for non-specialist network users. Xirrus Wi-Fi Inspector is available for Windows 7 and above and Mac. Xirrus Wi-Fi Inspector is a powerful tool for managing and troubleshooting Wi-Fi on Windows XP SP2 or later, Vista or 7 laptops. Built-in tests allow you to describe the integrity and performance of your Wi-Fi connection. The app includes where it searches for Wi-Fi networks, it manages and troubleshoots Wi-Fi connectivity, verifies Wi-Fi coverage, locates Wi-Fi devices, and detects fake APs. This is a software that helps you monitor your wireless network in real time, and also helps your wireless network work at an optimal level. Tracking your connection options from MiF is open access point and everything in between, both home and in the office can be a real hassle. But with the help of a Wi-Fi extension, you can manage and optimize your network from anywhere. You can also group or organize Wi-Fi networks based on SSID, distance, and so on. The app also displays graphs of selected Wi-Fi networks with signal strength and MAC addresses. The interface has several views such as a radar view that displays the names of surrounding networks, their distance, and some other details. When the application detects the network, it displays information about the network such as network SSID, signal strength (in dBm), network mode (802.11n/g), signal level, channel and frequency. Xirrus Wi-Fi Inspector is licensed as free software for PCs or laptops with 32-bit and 64-bit Windows operating systems. It is in the wifi/bluetooth category and is available to all software users as a free download. Xirrus Wi-Fi Inspector is a software solution that can help you keep track of your laptop's Wi-Fi networks or network routers. This app allows you to take some actions, such as searching for Wi-Fi networks, displaying connection problems, detecting fake hotspots, and verifying AP settings and Wi-Fi coverage. Xirrus Wi-Fi Inspector has a clean and user-friendly interface, showing detailed information about the current Wi-Fi connection, such as SSID, BSSID, channel, signal level, and network mode. If you do not an idea of how this program works, a help menu is included. A dynamic radar allows you to see the names of networks and the relative distance between them, based on their Wi-Fi signal strength. The app can also display a dynamic table of all available Wi-Fi networks. The list is updated automatically, as long as you've specified a time period and provided details about the name of the Wi-Fi network, signal, default encryption mode and authentication details, network mode, provider, BSSID, channel, frequency, network type, and graph. Network groups can be sorted by signal strength, SSID, and other networks. Filtering networks is especially simple. The app also has a chart display history window with detected Wi-Fi networks and their signal strength levels. Moreover, it is possible to perform three tests that can tell you more about your Wi-Fi network, such as connection testing, quality and speed. A dedicated window displays the end result (pass, warning, or failure). You can choose a radar or sonar scanning animation for a child utility and turn audio on or off. The network list can be exported to CSV. In short, Xirrus Wi-Fi Inspector proves to be a reliable tool for monitoring Wi-Fi networks. It's easy to work with, and can be mastered by both beginners and professionals. The software also helps troubleshoot the connection so that users can ensure that they are always connected to the network when they need it. Say goodbye to slow connections Even those who only have basic knowledge of computers will surely find that Xirrus Wi-Fi Inspector is easy to use. The troubleshooting option makes it easy to see why users have problems connecting to a certain point of broadcast and are able to work to reduce the problem and provide connected happiness. The software is complete with a special neighborhood scanner presented in the style of a radar. This radar will highlight all Wi-Fi hotspots in the area and provide the necessary information such as of connection and easy jumping on board. The user then selects the broadcast point that they want to use and the software takes care of the rest. Make the right connectionWith a large number of useful features, this is a great tool for connecting and monitoring different connections both in a given area and when traveling.
