Mt4 manual update

Accuracy Score: 1 votes - 5 Average 1 2 3 4 5 threaded Mode | Linear mode MetaTrader 4, build 509 manual update Sun, Jul 14, 2013, 6:29 PM Post: #1 Marco President + General Developer Posts: 862 Joined: February 2010 MetaTrader 4, create 509 manual update Build 509 from Metatrader 4, released on June 24, 2013, improves the automatic update capabilities and overall stability of platform updates; language support. Metaquotes (MetaTrader publisher) recently announced that all builds older than 416 will no longer be supported. For more information, see the official company report. The best way to upgrade your MetaTrader 4 platform is with your auto-update feature (at launch). However, updates are rolled out on each broker's basis, which means that different brokers often support and offer different builds of the platform. If you are stuck at an older build MetaTrader 4, and would like to upgrade to create a 509 that is the latest version (as in this writing), just follow the instructions below: Make sure your MetaTrader 4 platform is closed during this procedure Download attached file (terminal.exe) Copy the file you just downloaded, and paste it into your MetaTrader 4 root directory (for example. C:\Program Files\MetaTrader4\), replacing an existing terminal.exe. You may want to back up the original .exe file. Run MetaTrader 4, click Help>>>About and check the compilation number. It should be read 509. All Marko Nikolic Investment Research (formerly Build-a-Signal) indicators (MarketScalper PRO, TradeBuilder Classic, TradeBuilder Core) are fully compatible with NOTE 509: The attached file was compiled, published, and provided to me by Metaquotes Software Corp. – the official developer and publisher of the MetaTrader platform. Marko Nikolic, President and Chief Developer July 14, 2013 - Toronto, Canada Added file(s) terminal.exe (Size: 5.96 MB / Downloads: 624) Related Articles Article: Author of Last Post MetaTrader 4, build 902 manual update for Marko Thu, Mar 10, 2016 09:33 AM Last Post: Liovannix Renko EA (MetaTrader 4 build 600+) qb Thu, Aug 13, 2015 07:07 AM Last Post: johnmethew Metatrader 4, build 830 manual update Marko Thu, Jun 04, 2015 10:33 PM Last Post: Marko MetaTrader 4, build 745 manual update for Marko Wed, Nov 05, 2014 02:26 PM Last Post: Marko MetaTrader 4, build 670 my Latest Update for Marko Wed, Jul 23, 2014 02:44 PM Last Post: Marko MetaTrader 4, build 646 manual updates for Marko Mon, May 12, 2014 11:14 AM Last Post : Marko MT4 Build 409 Manual Update 2013 07:36 PM Last Post: daveh551 MetaTrader 4, build 500 manual update for Marco Fri, May 17, 2013 03:16 PM Last Post: Marco Fri, Nov 06, 2015 11:52 AM Post: #1 Marko President + Chief Developer Posts: 862 February 2010 for MetaTrader 4, create 902 manual update update (Nov 20, 2015): We have replaced the attachment with the newer version of MetaTrader 4 in build 910. Build 902 (stable continuation 900) 900) MetaTrader 4, released on October 23, 2015, improves platform memory usage (efficiency), detects errors, and adds class templates. See Metaquotes's release post for more details. The best way to upgrade your MetaTrader 4 platform is with your auto-update feature (at launch). However, updates are rolled out on each broker's basis, which means that different brokers often support and offer different builds of the platform. If you are stuck at an older build MetaTrader 4, and would like to upgrade to create a 902 that has the latest version (as in this writing), just follow the instructions below: Make sure your MetaTrader 4 platform is closed during this procedure Download attached file (terminal.exe) Copy the file you just downloaded, and paste it into your MetaTrader 4 root directory (for example. C:\Program Files\MetaTrader4\), replacing an existing terminal.exe. You may want to back up the original .exe file. Run MetaTrader 4, click Help>>>About and check the compilation number. 902 should be read. All Marko Nikolic Investment Research (formerly Build-a-Signal) indicators (TrendSuite Institutional, MarketScalper PRO, TradeBuilder Classic, TradeBuilder Core) are native to and are compatible with NOTE 902: The attached file was compiled, published, and provided to me by Metaquotes Software Corp. – the official developer and publisher of the MetaTrader platform. I've re-uploaded the terminal file - build 910. Marko Thu, Mar 10, 2016, 09:33 AM Post: #5 Liovannix Trader Posts: 1 Joined: Mar 2016 RE: MetaTrader 4, builds 902 manual updates (Friday, 20 Nov 2015, 02:27)Marko wrote: Thank you for my knowledge. I've re-uploaded the terminal file - build 910. Marko mt4 build 902 This article will provide traders with a quick, easy rundown of everything you need to know about how to use the MetaTrader 4 trading platform (MT4) and how to trade using MT4. Through step-by-step tutorials, and using screenshots and detailed explanations, this article will provide marketers with everything in them to truly master the MT4 platform. Setting Up MetaTrader 4 How to create a MetaTrader 4 on Windows It's really easy to install MetaTrader 4 and it's available operating systems. Once you've downloaded MT4, just run .exe and follow the instructions on the installation wizard screen. How to install MetaTrader 4 on MacAr the latest version of Mac OS, Catalina, Apple has removed the option to use 32-bit applications. This has affected many applications, including MetaTrader trading platforms that are currently not running Catalina OS. Parallels Desktop is a program that allows you to run a virtual machine on your Mac. The virtual machine emulates the computer and allows you to run another operating system, such as Windows, which basically acts as another host on the host computer. As a customer of Admiral Markets, you will receive three months of Parallel Pro completely free of charge if you meet the compliance requirements, which we will provide in detail later. With Parallels, you can use MetaTrader 4 when installing: Windows 10: orMac OS MojaveUser for Windows means that you can use not only MetaTrader 4, but any other Windows applications and applications right on your Mac! However, as a shack Mac user, you will need to purchase a license to comply with the Windows license terms. As a Mac owner, it is possible to run a separate Mac OS using a virtual machine on your Mac. Please note that it is subject to the relevant OS terms and conditions that you must read to ensure full compliance. Here we will guide you through the process of both methods starting in the same way. To open an account at Admiral MarketsFirstly, you need to open an account at Admiral Markets. To be able to use Parallels Pro for free for three months, you must have an account balance of at least €3,000.Request Your LicenseHead on this page and fill in your information to register for Parallels. Once you have submitted the request and our team has verified your rights, you will be sent your license key to start using Parallels Pro.Download Parallels for MacNext, you will need to download Parallels for Mac from their website. When the file is finished downloading, open it and follow the installation instructions on the screen. Once you have downloaded Parallels for Mac and entered your license key, you need to install the virtual machine. Here's where setup will vary depending on whether you want to use Windows 10 or Mac OS Mojave. Install Windows 10 Parallels Using If you want to use Windows 10, the installation process is incredibly simple! To install the virtual machine, you will see the screen below. Just click the icon called Get Windows 10 from Microsoft on the left. On the next screen, you'll be prompted to buy Windows 10 from the Microsoft Store. If you already have a license key, you'll be able to download Windows 10 and then download Windows with a license key. While installation is in progress, you may need to some set up questions similar to what you did when you turned on a new computer for the first time. This process can take quite a long time depending on the capabilities of the Mac. And that's it! Once the virtual machine is created, open the web browser on the virtual machine, go to this page and follow the download instructions for metatrader 4 for Windows! Install Mac OS Mojave Using Parallels. Unfortunately, installing Mojave using parallels is a little more complicated. It can't be downloaded directly from Parallel as in Windows 10. But don't worry, we'll take you every step! Go to this page that will ask for your permission to open your Apple App store page for download to Mojave. Please note that you will not be able to find the Mojave App Store without this link. Click the GET button to start the download. You will be asked if you are sure you want to download Mac OS Mojave. click Download. Don't worry, it doesn't reinstall Mojave on your computer automatically, but instead download the Installer program. The download may take some time because of the size of the file. When Mojave completes the download, it should not be able to run automatically. However, if it is, all you have to do is give up the installer. Now, head to Parallels and create a new virtual machine. You will be presented with this screen: Click on the average icon to Install Windows or another OS from a DVD or image file. Parallels should be able to find the Mojave installer automatically as shown below. If parallels don't find it automatically, select Choose manually and select a file on the next screen. Mojave installer will be in your Application folder. Make sure you have All Files selected from the drop down list as below screenshot shown, otherwise you will not be able to choose the installer. Once you have selected, press Continue. Parallels will need to convert the file to a disk image to use it to create a virtual machine. Once converted, Parallels will ask you to name the virtual machine and then the installation will begin. You'll run with different setup options as you would when you start a brand new computer. This process can take quite a long time, depending on the capabilities of your Mac. When it's finished, open your internet browser using your virtual machine, go to this page and follow the instructions to download The MetaTrader 4 non-Catalina for Mac! How to use MetaTrader 4 with Android Visit the Google Play Store to download MetaTrader 4 for Android or download it using Admiral Markets. Source: MetaTrader 4 platform – EUR/USD custom screen How to enter Short Position on MetaTrader 4 Going short (or short selling) market is easy to sell if you don't have a long position. To do this, you just need to sell the trade to open (as shown in the screenshot image above). How to close the trade MetaTrader 4 How to place a trade with MetaTrader 4 is just part of the information that the trader needs, of course. Once you've opened a trade, eventually comes the point when you want to close the trade. So how do I go out trading in MetaTrader 4? In the Terminal window, select the Trade tab (press CTRL+T to call or reject the Terminal window). You will see all open transactions that are displayed in the Trade section of the Terminal window. Right-click the order you want to close and select Close order. The Order window appears. On the yellow close button to close your trade. So if you have two positions or more open MetaTrader 4, 4, is wondering how to close one, this manual method is the way to do it, as you specify which individual trade you want to go out. This manual method is not the only answer on how to exit the trade in MetaTrader 4 though. You can also close by using a stop or limit order. How to set the Stop-Loss MetaTrader 4 As you can see from the Order window (shown in the picture below) there are fields designed for you to enter the Stop Loss level and Take Profit level. If you click the up or down arrow in the Stop Loss field, the box will automatically fill in the current market price (the platform uses the quote price). On the left, you can see how the proposed stop level is related to the current price and offer prices. Source: MetaTrader 4 platform - EUR/USD order window How to make a Limit Order MetaTrader 4 To make a limit to close a position, you just enter the target price level in the Take Profit field shown in the Order window (as shown above). You can also use a sequence of restrictions to open a position. To do this, you need to change the Type field from Market Fulfillment to Put-off. You can then choose Buy Limit or Sell Limit from Pending Order Type drop down menu if necessary. How to set tiled orders as the default for MetaTrader 4 If you add a stop loss or profit order when you open a trade, the default functionality is the order levels that must be expressed at absolute market levels. Once you have added a stop or limit order this way, you can go to the Trade tab in the Terminal window (CTRL+T to open or close this window) and right-click the trade you are interested in and select Change or Delete Order. This opens the Order window, which will now allow you to change your order level to point (no pips) away from the current market price. To change mt4 behavior, you'll need to run a script or EA (expert advisor) to change platform functionality to set stop and limit orders as tiles by default. How to change the volume of trading MetaTrader 4 MetaTrader 4, the volume of trade refers to the size of the trade in terms of the number of lots. As we discussed earlier, when you open a trade, you must specify a value in the Volume field in the Order window. Once you've opened a trade in a particular market, you can add to the volume (or position size) by opening the next position in the same direction in the same market (of course, at a new price), or you can reduce the volume by partially closing your position. Source: MetaTrader 4 - Trading Volume Exchange As trading company shares MetaTrader 4 Trading CFD shares with MT4 differ slightly from forex trading volume. An easy way to view a list of stock CFD prices in MT4 is Market Watch window (CTRL + M to open and and From this list, if you want to open the price chart, just right-click Symbol of interest to you, and select Chart window. Or you can click on Logs at the top of the MT4 platform and select New Window and then Share CFD. This will give you a list of stocks that you can trade. If you are part of your choice in the chart window, just click the New Order toolbar to open the Order window. From there, it's just a matter of simply choosing your trade size and choosing whether to deal with the market or labor constraint or stop ordering. If you don't see the part that interests you shown in the Market Watch window, then you need to know how to add items to MetaTrader 4. It's simple – just use the shortcut CTRL+U for you and search the Share CFD folders in the navigation tree. Let's say you want to add the German company Allianz. Expand Share CFDs (ES), and then #ALV (Allianz SE). To add to the Market Watch list, you just have to click Show, and then close. The preferred price will now appear as the last in the list of items in the Market Watch window, and that is how to add cfd 4 metatrader. In addition, clients trading with Admiral Markets can also invest thousands of shares and ETFs on 15 of the world's largest exchanges directly by opening an investment account! Click on the banner below to open your investment account today! How to add indexes to MetaTrader 4 open the Market Watch window (keyboard shortcut CTRL+M). Right-click in the window and select Symbols (you can also go directly to this by using the shortcut CTRL + U). Look for folders in the navigation tree named Money Indices. Expand them to reveal available stock index CFDs. If you want to add it to the Market Surveillance window, just select it and then click Close when you're done with the Symbols window, and your new tool should appear at the bottom of the Market Watch window. How to add items to MetaTrader 4 Adding items to MT4 is very similar to the process described above for CFDs on shares and indices. Let's say you want to know how to add gold and silver MetaTrader 4. Use the CTRL+you shortcut to open the Symbols window. Look for spot metals folders. Expanding the Spot Metals 1 folder reveals GOLD and SILVER. Select which one you want to add, and then click Show and Close. The specified instrument will now appear at the bottom of the price list in the Market Surveillance window (press CTRL+M to open and close the Market Surveillance window). If in doubt, right-click the Market Monitoring window and select Show All, which will show all available tools. How to add currency pairs to MetaTrader 4 Like described above, if there are special currency pairs that you want to trade, but see Market Watch, you can use the shortcut CTRL+U to open the Symbols window and search through the navigation tree for any currency pairs you want to add. To add a pair, just click the symbol and click Show. Trade Forex with Admiral Markets Do you know that with Admiral Markets you can trade over 40 CFDs for currency pairs, 24 hours a day, five days a week? Yes, you read that correctly! Admiral Markets is an award-winning, regulated broker that offers traders the opportunity to trade Forex with tight spreads, quick deposits and withdrawals, access to exotic currency pairs, and the ability to trade a state-of-the-art trading platform – MetaTrader 5! To start trading today, click on the banner below to open your live trading account! How to switch to MetaTrader 4 How to show terminal metatrader 4 You can open or close the Terminal window using the shortcut CTRL+T. How to display the trading history of MetaTrader 4 You can view the trading history of MT4 through the Terminal window, which you can open and close using the shortcut CTRL+T. In the Terminal window, click the Account History tab. Right-click anywhere in this window and you'll see a menu that offers a variety of options including Whole History, Last 3 Months and Last Month. You can also choose to save a detailed report. This includes all the trading information you might need, such as prize, size, MetaTrader 4 trading lead time, and profit/loss. If you want to learn how to print your account history in MetaTrader 4, just choose Save as Message or Save as Detailed Report. This message will be saved as an HTML file. When you open the file, it will open in a web browser. In your web browser, click the Edit tab and choose Select All (or use the shortcut CTRL+A). After you select all, right-click and choose Copy. Now open a word processor, such as Microsoft Word or Google Docs, and paste the copied data. You can then format your account balance data as you want, and then print by using the print function in the application. How to show the trading history on Chart MetaTrader 4 It is easy to show the trading from your account history directly to the chart MT4. Open the Terminal window (CTRL+T to open and close) and select the Account History tab. Click the sales window and drag it to the chart window. Now the chart will show the trading tool, and the opening and closing levels will be marked in the chart with small arrows connected by a dashed line. If you place the cursor arrows, the sales information will be displayed as specifying text. How to view Open Trades MetaTrader 4 As before, you can view the open trades through the Terminal window. You can see your open open by clicking the Tirdznieciba tab. To check how much money I have with MetaTrader 4 To check your trading account balance, open the Terminal (CTRL+T to open and close) window and select the Tirdznieciba tab. You'll be able to see your Balance Shown along with Equity and Your Amount Free Margin. Source: MetaTrader 4 - Check your balance How to withdraw money from MetaTrader 4 Withdrawing money from MT4 is simple and takes just a few steps using trader's room: Log in to your Trader's Room Go to Money Operation and click Remove Funds Select Withdrawal Option and then fill in your details How to change the color of trading levels in MetaTrader 4 As the default setting, MT4 will show the levels in the price chart for all open transactions that is in position. Defaults are a green dotted entry-level line and a red dotted line for both the stop loss level and the limit (profit) level. Changing the color of the sales levels is the same process as adjusting other colors to MT4, in other words, adding to it by accessing the Properties. To do this, right-click the price chart and select Properties (or use F8 as a shortcut). From here you can adjust the color of the stop levels. You can also choose to exclude these order-level lines

completely. To do this, select Tools from the menu bar at the top of the platform, and then select Options. In the Options window, uncheck Show sales levels if you want to turn off this feature. How to replace Chart Background MetaTrader 4 again, it is controlled from the Properties section of MT4. Press F8 to open Properties, and make sure the Colors tab is selected. The first item in the list is the background color. Just click on the drop-down menu and make your choice. How to install MetaTrader 4 scores MT4 comes bundled with a large number of key trading indicators. You can see them in the Indicators folder in the Navigator window. You can expand the number of indicators available on your trading platform by setting custom indicators. The easiest way to expand your scoreboard is by installing a MetaTrader Supreme Edition. MTSE is a custom plugin for MetaTrader 4 and MetaTrader 5, developed by industry professionals, with a handpicked selection of additional metrics and trading tools that increase your MetaTrader trading platform capabilities. You can also download some custom indicators that other developers have encoding on this platform. To download MetaTrader 4 Supreme Edition for FREE, click the banner below! How to add the downloaded indicator MetaTrader 4 Find the MT4 file that you have downloaded and copied it to your clipboard. Then mt4, go to File and select Open Data Folder. In the resulting window, open the MQL4 folder, and then open the Indicators folder. Paste indicator indicators in this folder. Then, restart the MT4. The new custom indicator must now appear in the Navigator indicator list. Use the CTRL+I shortcut to display your list of indicators to turn off the MetaTrader 4 pointer to turn off the indicator. Select the indicator you want to turn off by clicking it and then clicking the Delete button. First, add the MA indicator to the chart by double-clicking The Variable Average in the Indicators folder in your Navigator. A dialog window opens in which you can set the indicator parameters. The MA method determines what kind of moving average you are using. Choosing a Linear Weighted Gives You a Linear Weighted Variable Average (LWMA). How to add Templates MetaTrader 4 It is very easy to customize the appearance of the chart MT4. To do this, right-click the chart, select Properties, and then click the Colors tab. From there you can choose to customize the background colors, foreground, up and down candles and so on. Once this is done, you would like to maintain this look and feel for future use. You can do this by saving it as a template. Right-click the chart again, and this time choose Template, and then click Save Template. Once you've saved a template, it's very easy to add it to a new chart. To do this, just right-click the chart and select Template, and then Load Template. You can read more about Templates and Profiles on the MQL4 Website. Source: MetaTrader 4 – Adding templates to MetaTrader 4 How to Draw A Short Line MetaTrader 4 Adding trendlines to maps can be a very useful tool. The default behavior using the Trendline Draw (a button with diagonal line on the toolbar) is to draw a line that extends all the way to the right of the screen. However, there may be times when you just want a shorter line instead. To do this, you need to: Turn off your line of beam behavior double-click on your trendline This puts the line in edit mode. Now that you have it in edit mode, right-click on the line and select trendline properties. In the Trendline window, select the Parameters tab and uncheck Ray. Now you will have short trends. How to make Trend Lines permanent MetaTrader 4 If you want a trendline for a certain currency pair to re-appear the next time you look at that pair, you have to keep your work as a template. To do this, either click chart from the menu bar at the top of the platform and then Template and then Save Template, or right-click your chart and from there select Template and then Save Template. If you close MT4 and find that you want to your analysis lines again, all you have to do is go to template and and , click Load Template. Then select which file name you saved your work to, and any saved trendlines will be displayed again. How to copy the trade to MetaTrader 4 If you're wondering how to trade MetaTrader 4 on more than one account at the same time, mimicking trades directly to all of them, here's the answer. First of all, we need to look at how to use multiple accounts in MetaTrader 4. To do this, you must install multiple versions of the MT4 platform on your computer, each assigning a different destination folder. You can then log in to each individual account using a different version of MT4 for each account. To copy transactions, you must configure each account to allow automated trading and allow linking to dynamic libraries. To do this, click Tools at the top of the platform, and then select Options. In the Options window, select the Expert Advisors tab and select the Allow automatic trade and Allow DLL import check boxes. The final step is to install the commercial copying program MT4. You will find many examples of MetaTrader 4 marketing copy programs if you make a search for the MQL5 Website. Therefore, using The Copy Expert Advisor is a method of linking your existing account to another computer. How to Make a Screen Bigger on MetaTrader 4 There are only so many real estate available on your screen to show the different windows you have opened in MT4. Closing certain windows will cause the rest of the windows to enlarge. For example, closing the Navigator window will cause the price chart to increase in size and take up new space. Press CTRL+N to turn the Navigator window on or off. Similarly, you can use 'CTRL+T' to turn the Terminal window on or off. As scale to MetaTrader 4 you can zoom in and out on the chart using the + and - keys. How to scroll through MetaTrader 4 You can use the cursor keys to scroll left and right on the chart MT4. Page Up and Page Down keys quickly scroll left and right, respectively. As you show pips in MetaTrader 4 you can control your operating profit on your open trades by looking at the Trade tab Terminal window (CTRL+T to open and close the Terminal window). Profit is displayed in your deposit currency by default, but it's easy to switch it to display it as pips instead. To do this, right-click in the Trade window and select Profit. Then select Points instead of Deposit Currency. 10 points shall be equal to one number of points with split price fixing. Source: MetaTrader 4 - How to display tiles in MetaTrader 4 How to set alerts metatrader 4 Select Alerts tab from terminal window (CTRL+T to open and close). Right-click anywhere in the Alerts window and choose Create. You then need to fill in the warning criteria, for example, on which market you Value (i.e. price); Condition (for example, if The Quote is less than a certain price or Ask is less than a certain price, etc.) and when you want the alert to expire. How to enable email alerts in MetaTrader 4 Use ctrl+O shortcut to open the Options window and click the Email tab. You then need to fill in the fields to configure which e-mail server and address is used to relay e-mail alerts to you, and to which email address you want to eventually receive alerts. First, click Enable, and then fill in the various fields. In the SMTP (Simple Mail Transfer Protocol) configuration fields, you can find that it's worth creating a Gmail account just to broadcast these messages to your existing email account. Make sure to click Test to verify that it is running before clicking ok. Source: MetaTrader 4 Platform - Allowing email alerts for MetaTrader 4 How to update MetaTrader 4 to MT4 will automatically update itself to the latest version when a new update is released by MetaQuotes, the software company behind the MetaTrader family of platforms. You can see which version of MetaTrader 4 you are running by clicking Help at the top of the mt4 platform and then selecting About. Source: MetaTrader 4 - Updating MetaTrader 4 How to change the time zone of MetaTrader 4 Time zone used by mt4 driven broker you are using. It cannot be locally changed on your device. So the only real answer on how to change the time of MetaTrader 4 is to use a broker that uses a different time zone. How to choose your server MetaTrader 4 Select File from the menu bar at the top of the MT4 platform and then Login to Trade Account. As a result, popup offers a Server feature from which you can specify a different server. How to mark days in MetaTrader 4 Using hot key combination CTRL+Y to show (or hide) separators allows you to clearly mark the days of your hours in mt4 charts. In the daily chart, the separators will mark the beginning of the month. How to restore MetaTrader 4 to default To restore the chart to its default settings, just right-click on the chart and select Properties. In the Properties window, choose the Common tab, and then click the Reset button at the bottom. If you want to restore the entire platform to its default state, the kernel option is to reinstall the MT4 on the device. How to refresh MetaTrader 4 If you have MT4 open for a long time, sometimes, you can see the gaps begin to appear in the chart data. You can edit it with a simple refresh - right-click the chart and select Refresh from the menu. Sometimes, you may need to go further and perform a complete manual reset of the chart data. How to reset MetaTrader 4 Press F2 to open the History Center, and then search the directory tool and time frame you to refresh. Double-click the time frame and it will fill the window with the data values. Select all values by clicking the first cell, holding the shift key, scrolling all the way to the bottom, and clicking the last cell. Click Delete, and all values will disappear separately from one row. Click Delete again to remove this last row. Your chart now says Waiting for an Update. If it is not completely refilled, try going to a different period of time, and then again. You can also right-click and choose Refresh. When you restore a chart, it must address any flaws in your data. Source: MetaTrader 4 - Refreshing MetaTrader 4 How to find your MetaTrader 4 account number You can see the account number with which you are logged in by going to navigator (CTRL+N open and close). The Navigator must be the Accounts folder above the Indicators folder. You can see the account number listed there. How to get to News Feed MetaTrader 4 you can access the news feed MetaTrader 4 through the Terminal window. Use CTRL+T to open or close the Terminal window, and then click the News tab. How to speed up MetaTrader 4 If you have a lot of charts open that run for a long time, it can cause MT4 to run slowly if you don't have enough free RAM available on your device. One way to fix this problem is to reduce the number of data displayed in each chart. You do this by clicking Tools at the top of the platform, and then selecting Options (or using the keyboard shortcut CTRL+O). In this window, see the history of the Max bar and the Max bar chart to lower values. Regularly restarting MT4 will also help alleviate problems with slow ing, as well as closing any expert advisors that you are not using. How to create EA MetaTrader 4 Expert Advisors or EAs to perform automatic functions in MT4, as pointed out by their developer – you can imagine them as marketing and analysis robots. You can create an EA by opening MetaEditor. The fastest way to do this is by pressing F4 (you can also right-click the expert advisors in the MT4 'Navigator' and then selecting Create MetaEditor, and there is also an icon on the toolbar for this particular purpose). In MetaEditor, click New to launch the MQL4 Wizard, which will help you by creating a new expert advisor. You may find it easier to download and install EA than create your own, however. The EA m4 setting method is very similar to setting a custom indicator. First, locate the EA file on your computer and copy it to the Clipboard. MT4, go to File and select Open Data Folder. In the new window, open the MQL4 folder, and then open the Experts folder. Paste the copied EA file into this folder. Now you will need to restart MT4. The new EA must now appear in your Consultants Navigator. Just click and drag to the chart to start using it. How to install scripts in MetaTrader 4 If you have purchased a commercially available script, be sure to read and follow all the attached installation instructions. Generally speaking, adding a script is similar to installing EA (as described above). Copy the file to the Clipboard. Click the File tab in the upper-left corner of the MT4 platform, and then select Open Data Folder. Open the MQL4 folder and search for the Scripts folder. Open the Scripts folder and paste the copied file into it. As programmed metatrader 4 you can create the program MetaTrader 4 using MQL4 language. The best place to start if you want to learn about coding MT4 is the MQL4 Website. How to make an artificial neural network in MetaTrader 4 If you are familiar with the concept of artificial neural networks and have abilities with the program MQL4 in the language that MT4 uses, you have the skills needed to create an artificial neural network with MT4. To do this, you will need to use the Fast Artificial Neural Network Library (FANN) to create a network of neurons, which you can train to understand market data and perform marketing functions as part of EA. How to use MetaTrader 4 - Final Word We hope you liked this guide on how to use MetaTrader 4. Of course, the best way to get these tips and techniques to really sink is to go ahead and try them yourself using MetaTrader 4. If you're wondering how to play around with MetaTrader 4 without risking any money, the best way is with a demo trading account. Each demo trade is completely risk-free, making it the perfect way to experiment with trading on a platform and understand how MetaTrader 4 works. Once you've built up your trust through demo trades, and are ready to trade for real, you'll need a live trading account. How do you create a MetaTrader 4 live account? Read the Admiral Markets Start Trading page to find out how easy it is. If you enjoyed this detailed list of tutorials on how to use MetaTrader 4, you might as well like to explore MT4 shortcuts by checking the MT4 Shortcuts Guide.
