There has been a lot of talk in the community about the compatibility of the new Kodi 17 and older Android devices. Even in some quarters they are saying you need a new device. Well it's wrong. I wrote a blog last week about EBMC that had fork codes that could be used for Android 4.4 devices. This blog can be read HERE I have been looking for other options over the weekend and testing on various old devices even 4.2.2 android devices like my trusted Icecube. God i hated this device ??? SPMCProbably one of the best known or most famous Kodi forks. Brought you in with Koying, who was part of kodi's development team for a while. That's what Koying had to say about SPMC and what the latest versions requireAs as far as I'm concerned, Nvidia Shield is basically cornered in the market, it's my main development device. Speaking of all, Android TV devices, amlogic devices and Amazon FireTV could get some love? Important: No more Rockchip special support from this versionNote 1: From 16.5.0, Android Lollipop (API 21) is 2: Recommendations and Android voice search, SPMC already needs to run. Great alternative to Kodi 17 on your device. 17.1 Fork will be available soon. WOOKIESA guys at the team wookie have also brought out the fork as such with there based on those versions of all 16.1 APK 17.1 APK and 17.0 4.4 android users. (click on green writing apk download screen) THE FTMC Freak Tab Media Center has fork codes for Jarvis 16.1 and provides hardware acceleration and more features for rockchip mainstream chips (rk3228, rk3229, rk3229h, rk3288, rk3368, rk3399) and most android version (Android4.4, 5.x, 6.x). If hardware is permitted, FTMC supports 4K2K、4K2K 10bit(H264,HEVC),MVC 3D (bluray & mkv), high-profile audio permeability. And also keep Android 4.4 support for older devices, also maintain better support for Amlogic S9xx Chips, and maintaining amlogic AMCODEC (only android version 4.4 to 6.x, because 7.x amlogic remove support it)CEMC Looks very promising Fork it is compatible with 4.2.2 it works on all our older Android devices and uses Python 2.7 (https support) for both ARM & X86 devices. This https (TLS V1.2) support is so important because most streaming sites are moving to this protocol. It was my favorite of all the forks, if I'm honest because it was compatible with all the devices I threw at it bringing the device back from the dead. Ice Cube running 4.2.2 lives another day with Kodi 17 features happy days. Download Codes 18.0-RC4. Media center for your smartphone.
