Before that we need to add the device and accept the license rights – just a formality. At first, we'd get to the Settings page, where the different types of devices we can manage are located. If we are interested in dvd control, choose the right category, then mark a model. So, after choosing the right device, we see a kind of remote control on the portable tv screen. Naturally, its structure changes at the request of developers, but in general everything is quite comfortable. After selecting a device, if there is no saved profile in the app, we will be asked to test the work. To do this, check the action of the buttons, if something doesn't work, then there will be other species that need to be checked as well. The most interesting function in settings is the so-called 3D buttons. AnyMote Global Remote supports a large number of the most versatile home appliances and now includes pre-suite ready-made. If necessary, we can add a profile for your device in manual mode. Well, users of devices without infrared ports can use Wi-Fi control if such an opportunity is supported by the technology itself. Features of free version of AnyMote World of the Way Organization: Organization from buttons, color change, position, text, icons and other elements of the software; Floating button, which allows access to remote control for access even while using other applications; Use automated tasks to execute commands without interaction; Advertising. Features an extensive (paid) version of AnyMote World Remote: add an unlimited number of remote controls; Support high/restore remote control and your settings; Receiving personal customer support, support for additional functions, lack of advertising. In general, the AnyMote Remote Universal app can easily replace almost any console that allows you to manage home appliances. However, in the case of the free version, this is not very convenient, since we can only save a console. And one more thing - advertising. The paid version lacks the disadvantages mentioned and offers more features. You may also like: 11 excellent software compatible with PS4 and Xbox Controller back to menu ^ ZaZaRemote developers released not only a mobile app but also a special device that extends the capabilities of smartphones or tablets. The first time ZaZaRemote launches, we are offered to add the console to the app. And here's everything done, absolutely, that is, we have the most popular categories, there's a search for brands and models, as well as a very convenient navigation by manufacturers. After selecting the device, we are periodically suggested to press certain buttons to specify the device model and select the correct remote control. We have remote control at our disposal, and we can use a lot of its functions, but not all. If you swipe left, the screen displays information about the device manufacturer that we are using. We can also manage technology through a special panel in the status bar. This allows you to quickly turn this device on/off and go to parameters. Another important feature of the ZaZaRemote app is that we can group consoles by rooms. It will be useful for those who have entered all their appliances into the app and want to easily use a smartphone. But unfortunately there are no settings in this app. Separately, only two parameters are rendered – themes and IR signal reading. There are only two theme parameters in ZaZaRemote: White and Dark. ZaZaRemote supports more than 6,000 devices from different brands and contains 250,000 remote consoles. Inspirational numbers! ZaZaRemote is a balanced mobile app for home appliance management. It's both beautiful and functional, and can even add support to Port to where it doesn't exist. Of course, we need the right device for the same company. Among other benefits, we note that usefulness is completely free and does not contain advertising. Back to the ^ menu when you first start the program. Sure World remote tells us: manage everything and make life easier. And then we'll be shown how to add the device and move the eye of the app into your own hands. The process of adding a new console can be divided into four steps: selecting a device category (connection), choosing the device type, choosing the device manufacturer, and remote testing. The whole setup process is as simple as possible. Here the developers showed their imagination and made the app interface more interesting, at least compared to competitors. Sure Universal remotely has almost no parameters, much less intelligent functions. All we can do is vibrate on/off, voice messaging, two graphical themes, backups. Sure Universal remotely works well with home appliances, which are on its listings. However, it is not widespread. Not even all Wi-Fi-connected devices are supported, so you shouldn't expect anything supernatural from the app. Back to the menu ^ Smart Skin remotely is an app that helps remotely control various home appliances: TV, DVD, home theater, air conditioning, thanks to infrared ports built into smartphones. To work with the app you need an internet connection, and the necessary files and updates to use this or that brand of home appliances will be installed. In addition to standard use for TV control, the infrared port is able to interact with a high set box, DVD player, Blu-ray, home theater, receiver, projector, home appliances (heater, air conditioning, washing machine), indoor lighting, etc. Main benefits: The app supports a variety of devices; through the app, you can actually watch online TV channels; A system of reminders about telecast is expected; Ratings made recommendations in relation to TV shows in it. This helps select channels and programs that match the user's wishes and preferences, an accessible and understandable interface. A number of benefits make this app interesting and popular since many users have access to all home appliances in the office/home. The most important advantage is being global since most other apps only support a few of the most famous brands. You can also check out: 15 best apps to watch TV apps for free on Android and iOS back to the menu ^ Mi Remote Controller is a simple app that allows you to manage smart technology in your home using your phone. It's worth noting here that your smartphone should have an infrared port. Run the software and click the + icon in the right corner of the screen. Here you are. Be asked to choose the brand of technology that you want to manage. Choose Philips or some other brands, for example. Now you will be asked to choose the type of device: TV, air conditioning, DVD player, etc. On the app's home screen, it appears on/off, you need to redirect your smartphone to the equipment and click the button. Pressing to turn the device on/off, this will mean you have chosen the correct settings. Do the same with other suggested buttons. It can control most devices using infrared remote control, for example TVs, air conditioning, air fans, and projectors. If the device is controlled using Bluetooth wireless or remote control, it will not be supported by the Mi remote app. An Internet connection is only required if we want to connect to a new device. After saving the device, we can use this application offline. Back to menu ^ Global Power Remote Control is a software that turns your Android mobile device into a remote control for a DVD. To do this, it is very important that your Android phone or tablet has an infrared port. If there is no infrared port, then the program will be completely useless. It is as if you installed this software, and it didn't work, then most likely the app would not support your mobile device. If you have a mobile device with an infrared port, then you can install universal power remote control, then configure it. All you have to do is choose your DVD model, and after a few seconds, s will be able to use it. The most popular Android devices compatible with this app can be the Samsung Galaxy S4, S5, S6, HP 3, 4, LG3, G4, and HTC One. Power Universal Remote Control is an interesting app for anyone who regularly uses DVDs and has a mobile device that supports the relevant functions. Back to the ^ menu do you want to easily manage your DVD with your mobile device? To do this, you need a tool with an infrared port and a specific application, for example, ASmart Remote IR. ASmart Remote IR supports the following types of devices: TV; Smart boxes and streaming toys; Air conditioning; DVD/Blu-ray player; Projector. Initially, the ASmart Remote IR app lets us know that we don't have remote control and offers to add it. We agree with the app and add a new console. Next, we are offered to select a device brand from the list or use search. The console and possible configurations will then appear for control. We need to test all functions and select the console. If something doesn't work, then go to another configuration and check the remote operation again. Externally, IR ASmart's remote control is styled as a real console, which has buttons, types of arrows, and controls on are displayed. Are. The truth is that it's not very comfortable since the buttons are relatively small and it's difficult to use them, especially if the device has a small screen diagonal. At ASmart Remote IR you can create unlimited number of rooms and fill them with supplies. ASmart Remote IR is designed for beginners or not very demanding users who now use ready-made and customized solutions. In fact, if, first, we choose the correct preset, 100% compatible with our device, then we will have no problem using the app. The ASmart Remote IR program is simple, and no permission is required to exploit it. ASmart REMOTE IR software is the most realistic remote for home TV, DVD, air conditioning, digital camera, and other devices. The program is very easy, quickly launched, with various functions not overloaded. Back to the ^ menu if you are tired of a varied set of remotes, for example, for TV and related devices, it's not rushing to Google for a global console on the Internet. Maybe, you already have such a device, but simply don't know how to reveal its potential. And for this, you just need to install a simple ir software remotely. To add a new console, we need to open the sidebar and click the corresponding button, then the menu opens with device categories. Next, you act by analogy to similar applications. Almost all of them offer the same architecture and similar design that does not allow them to stand out from the analog population. When choosing a technique, we do not make a search, without sorting by manufacturers. Everything needs to be done manually, scrolling through the largest lists in search of a specific model of the device. Then we need to test the performance of our virtual console, and the remote control is ready! Ir Universal's developers didn't bother to complete the remote design, but simply split the screen into rectangles and fixed specific measures for them. We can't say it's very beautiful, but it's as comfortable and strict as possible. However, the console can be duplicated if you wish. Yes, it's possible and really convenient, especially when you need to quickly switch channels, lower temperatures or perform some other rudimentary action. A similar display and functionality is provided by the widget for the desktop. Not surprisingly, for such quality product developers get a lot of flattery reviews. The app is excellent, and the only thing lacking is some cool features and a slightly better design than the console. It's free and doesn't include any performance restrictions. You may also like: 11 best IPTV apps for Android & iOS back to the menu ^ is said to be that a mobile device with a special IR port can replace the control panel, but it's worth starting with the appearance. And in that case, self-application It resembles a remote controller. This is how it is implemented in the It Control Program. Key features of its control: a realistic image of consoles: now it's more than just buttons. Real remote detailed images are now on your phone; Sync multiple console operations: combine cable and satellite TV consoles with your phone; Timer function: Set the time to turn on the devices at the specified time; add your console: in case you don't find the desired remote control in the list, just send the image to developers, and they'll update the app as soon as possible, new remotes are added every day. Features of the paid version of its control software: an unlimited number of devices: in the free version of the app, you can work with three consoles simultaneously; No ads: nothing distracts from working with the app; Groups: Combine consoles and devices in different groups as you like. When the Control It app is first launched, we will have to accept the license agreement and choose the display option for the way in which. We have a choice of a more visible option and a practical one. They vary in the number of consoles displayed at the same time. After that, we go to the menu and can add any supported console to your app. Its control supports a large number of devices, including various heating and cooling systems, split systems, DVDs, digital cameras, radios, and more. The most interesting part of the tool is that we don't choose the device controlled by the console, i.e. remotely! Accordingly, we see a large number of models and their efficiency level in the form of rankings. Everything is beautiful, obvious, and it will be useful if the model doesn't know the device, but you'll see or remember how its console looks. Anyway, to use the app, or instead of adding the console, we should have an internet connection. After all, each console is loaded separately. But the original remote design and quality is high. And right after installing remote, you can use it without any problems. The only drawback of Control It is that we can only use up to three consoles. In addition, you can buy two more or buy a wide version of the tool without any limitation of functionality, the number of plug-in consoles, and advertising. Advertising.
