D

D allows you to write large code snippets without redundantly typing types, as dynamic languages do. On the other hand, static inference deduces types and other code properties, giving the best of static and dynamic worlds.

empty main() { auto arr = [1, 2, 3.14, 5.1, 6]; automatic dictionary = [one : 1, two : 2, three : 3]; auto x = min(arr[0], dictionary[two]); } auto min(T1, T2)(T1 lhs, T2 rhs) { return rhs < lhs ? rhs : lhs; }
Automatic memory management makes the code safe, simple and robust. D also supports scope resource management (also known as the RAII language) and reach statements for deterministic transactional code that is easy to write and read.
import std.stdio; class Widget { } void main() { auto w = new Widget; scope(exit) { writeln(Exit primary.); } foreach (line; File(text.txt).byLine()) { writeln(line); } writeln(); }
Integrated linear and associative matrices, slices and ranges make daily programming simple and enjoyable for tasks, both small and large. The programming language D Modern comfort. Modeling power. Autocthonous efficiency.
void main() { import std.range, std.stdio; auto sum = 0.0; automatic count = std.in.byLine .tee!(l => sum += l.length).walkLength; writeln(Average line length: .account ? sum / count : 0); }
