Understand daily math for parents Learn more about the EM curriculum and how to help your child. This document (RN-00HS239-54, April 2020) provides information about Hitachi Global Link Manager 8.7.2-00. It shall include information that was not available at the time of publication of the technical documentation for that product, as well as a list of known problems and solutions. This document is intended for customers and Hitachi Vantara partners who license and use Hitachi Global Link Manager.Product software, drivers and firmware downloads are available on Hitachi Vantara Support Connect. Sign in and select Product Downloads to access the most up-to-date downloads, including important updates that may have been made after the product was released. This is a minor version that adds new features. Average CD-ROM editing software Hitachi Global Link Manager 8.7.2-00 Full Package # New features and product enhancements applicable OS 1 HGLM can now manage HDLM instances running on any of the platforms listed in the Applicable OPERATING System column. The SUSE Linux Enterprise Server 12 SP5 2 platform specified in the applicable OS column is no longer supported as an HGLM management server. Windows Server 2008 R2 3 platforms listed in the Applicable OS column are no longer supported as web clients to work with HGLM. 7000000000000 Windows Server 2008 Windows Server 2008 R2 4 Web browsers listed in the Applicable Products column are no longer supported as Web clients to work with HGLM. Internet Explorer 9 Internet Explorer 10 5 The web browser specified in the Applicable Products column running on the operating system specified in the Applicable OS column is now supported as a web client to work with HGLM. Internet Explorer 11 Windows Server 2012 6 The web browser specified in the Applicable Products column runs on os that is listed in the Applicable OS column is now supported as a web client for HGLM operation. Firefox ESR 68 Red Hat Enterprise Linux 8.1 7 can now support HDLM, which manages the repository displayed in applicable product products as a management objective of LWG. However, there are limitations to the functionality of the HGLM 8.7.2-00, and the LDEV label cannot be displayed for storage. Virtual Storage Platform of Hitachi E990 System requirements of the system are moved to a separate document, the requirements of the Hitachi system for command pack (MK-92HC209). The document is presented in HTML format to read in a browser. Open the ZIP file and read ReadMe.txt for information on access to the document. Registered schedules in the Add Hosts dialog box may not be edited or deleted. This issue may occur on the Scheduled Scan page on the Network Scan tab. Inputs may not be checked normally in the Add Network Scan Schedule dialog box. Incorrect messages may be displayed when hdlm installer download functionality is used. See the following sections in the Hitachi Global Connection Manager Installation and Configuration Guide: Section 2.1, Global Connection Manager Installation Types - Preparing to Install Global Connection ManagerSection 2.1, Global Connection Manager Installation Types - Install Global Connection Manager for the first timeSection 2.1, Global Connection Manager Types - Reinstall Global Connection ManagerSection 4.4 , Global Connection Manager Cluster Types - Install Global Connection Manager with other Hitachi storage command Suites installedRefer on the following tabs in hitachi's Global Connection Manager Installation and Configuration Guide:- Section 1.4, Working in an IPv6- Section 3.1, Notes when executing commands- Section 3.2, Start and Stop Global Connection Manager - Stop Global Connection Manager; Section 3.3, Change the time of the machine on which Global Connection Manager is installed; Section 3.5, Maintain global connection manager database restore the Global Connection Manager database. Section 3.5, Maintain the Global Connection Manager database - Migrate the Global Connection Manager database; Section 3.5, maintaining the Global Connection Manager database - changing the storage location of the Global Connection Manager (non-cluster) database- Section 3.5, maintaining the Global Connection Manager database - Changing the storage location of the Global Connection Manager database (for cluster environment)- Section 3.6, Change global connection manager environment settings- Section 3.6, Change global connection manager environment settings - change global connection manager settings; Section 3.11, User Account Security Settings- Section 3.12, Setting up a warning banner - Edit message- Set a warning banner -- A message from The New York Times Section 3.13, Generate audit logs - Edit the environmental settings file for audit logs; Section 3.15, Settings required to authenticate users through an external authentication server - settings required when using the LDAP directory server for authentication- Section 3.15, Settings required to authenticate users through an external authentication server - Settings required when using radius server for authentication- Section 5.2, Security settings for communication between server and LDAP directory Server- Section 5.2, security settings for communication between server and LDAP directory server - obtaining ldap directory server certificate Section 5.2, Security settings for communication between server and LDAP directory server - import certificate truststore file - Section 6.1, View single sign-on integration and user management for Hitachi Command Suite products- Appendix A, hitachi command pack settings Common Agent ComponentNotes to perform online pool processing or set offline for HDLM paths for VMware:from HGLM version 8.1.4 or later, if you are running simultaneously Set online or set offline paths on multiple ESXi hosts that are managed by one remote management client (version 8.1.4 or later) , CPU usage may increase depending on machine specifications , on which the remote management client is installed. To prevent this, for the value of the server.thread.max_size property in the server.properties file, specify a value that is less than the number of ESXi host machines for which Set Online or Set offline processing is performed at the same time. See the following guide for editing the server.properties file: Hitachi Command Pack Global Connection Manager Installation and Configuration Guide section 3.5 Change global connection manager settings - Change global connection manager settingsNotes for HDLM 8.2.0: If you want to use HGLM 8.2.0 or later to manage HD 8.2.0, install HDLM 8.2.0-01 or later. The following issues are fixed in HDLM 8.2.0-01. If you install HGLM on a remote client management client where hdlm for VMware 8.2.0-00 is installed or on a host where hdlm for Windows 8.2.0-00 is installed, SNMP traps will not be received from an instance of HGLM on the same host. If HDLM 8.2.0-00 is installed on an AIX, Linux, or Solaris host and IP address that corresponds to the local host name, SNMP traps will not be sent to HGLM. Before you run automation director in a cluster environment, run the following:In the Cluster Management software, right-click to select the source script and set the dependency from [property] -[Dependencies] -[Dependencies] In addition, specify [HAutomation Engine HCSclustergroup-name] of the resources that need to be brought online before entering the script online. Notes on using HGLM to manage HDLM for VMware hosts: To remove HDLM for VMware hosts from HGLM management, do this when hosts are connected. If you plan to uninstall HGLM, first remove hdlm for VMware hosts from HGLM management when the hosts are connected, and then continue uninstalling HGLM. Notes on a new installation or upgrade: Before installing or upgrading a server that has the following version of the product installed, follow the procedure described. Version:Hitachi Replication Manager v8.0.0-00 earlier than v8.4.0-00Hitachi Device Manager 8.0.0-00 to the previous one from 8.4.0-00Procedure:1) If Device Manager is remotely connected to Setup Manager, Turn off Tuning Manager server.2) Log on to Windows as administrator.3) when installing Hitachi command Suite in a cluster environment, take Hitachi Command Suite services offline, and then suppress the resource group move accordingly in the following section in hitachi command suite installation and configuration manual depending on the version from which you are upgrading. For 8.0.0-00 to previous from 8.2.0-00:- Suppression of failover when upgrading or overwriting Hitachi Command SuiteFor 8.2.0-00 or later:- As Hitachi Command Suite services offline4) Run the command prompt as administrator, and then run the command below in the following order.a. cd / d &Hitachi-Command-Suite-installation-folder>Base64 \binb. hcmds64srv / stopc. hcmds64srv / statusalld. hcmds64dsrv / starte. cd &Hitachi-Command-Suite-installation-folder>\Base64\sbinf. hcmdsdbreclaim -k index -a -cdg. hcmdsdbreclaim -k index -j -c.d. 5HC107-34 March 2020 Hitachi Command Pack Global Link Manager Messages MK-95HC108-33 March 2020 Hitachi Command Suite Global Link Manager User Manual MK-92HC214-16 March 2020 Hitachi Note: Hitachi Global Connection Manager Guide replaces help files, which were delivered as part of the Hitachi Command Suite Global Link Manager (MK-08HCH156-810) You can continue to use the help content from the GUI.© 2020 Hitachi product, Ltd.
