## D

D allows you to write large code fragments without overly unspecified types, such as dynamic languages. On the other hand, static conclusion deduces types and other code properties, giving the best to both static and dynamic worlds. `void main() { auto arr = [ 1, 2, 3.14, 5.1, 6 ]; car dictionary = [ one : 1, two : 2, three : 3 ]; car x = min(arr[0], dictionary [two]); } car min(T1, T2)(T1 lhs, T2 rhs) { back rhs &lt; lhs ? rhs: lhs; } Automatic memory management makes secure, simple, and strong code. D also supports scope resource management (a.k.a. RAII idiom) and scope statements for a deterministic transfer code that is easy to write and read. import std.stdio; Class Widget { } void main() { auto w = new widget; scope (exit) { writeln( ); } foreach (line: File(text.txt).byLine()) { writeln(line); } writeln( ); } Built-in linear and associative arrays, slices, and ranges make daily programming easy and pleasant for both small and large tasks. D programming language Modern comfort. Modelling power. Local efficiency. void main() { import std.range, std.stdio; auto amount = 0.0; auto count = std.in.byLine .path!( | => amount += l.length).walkLength; writeln(Average line length: , number? amount / number : 0); } Эта страница переведена с помощью машинного перевода.
