Playing blackjack as a business lawrence revere pdf

Lawrence Revere had an extensive background in both blackjack and casinos, on both sides of the tables. He had been a blackjack player, card counter, pit manager, and dealer at various stages of his 28 year career in the gaming industry. Lance Humble mentions Lawrence Revere in his book The World's Greatest Blackjack Book, and Revere still has an online website, even though he died of cancer in 1977. (We believe that Revere's family owns the site, but we're not sure about this.) Playing Blackjack as a Business consists of 70 charts, of which 36 are in color, and 11 chapters. The book begins by reviewing the rules of blackjack, then covers the basic strategy and how to actually play at a table. Then they are presented several diagrams, following additional chapters that expand on the concepts presented in these diagrams. If learning from charts is easy for you, then this book can be an excellent tool for your learning. One aspect of playing Blackjack as a company that we enjoyed was time estimates given for how long you can expect to take to learn the different aspects of being a card counter: Learning basic strategy will take the average person 4 hours. Learning the most basic counting system in the book, Revere Fives Strategy, will take another 4 hours. Revere Plus Minus Strategy will take another 8 hours to learn. You should play with these strategies for at least 2 weeks before you tackle the more advanced strategies. Revere suggests that the way to get the most out of the book is to read the book in its entirety first, ignoring the charts. Then learn and practice basic strategy. After that, he suggests re-reading the book again, then learning Plus Minus Strategy. We're not sure why Revere Five's strategy was left out of How to get the most out of this book section, but we assume it was just an oversight. Chapter 1 – The Game of Blackjack chapter immediately shows its age because the 1st sentence says that Nevada is the only state that offers legal blackjack games. Although it was true at the time, blackjack is now available in several states throughout the United States. And of course, the book was written before online gambling, so no aspects of playing online are addressed at all. (Although counting cards online is a strategy that is almost impossible to implement at most internet casinos.) Revere goes on to briefly review some of the other blackjack books available at the time. He likes Beat the Dealer, The Casino Gamblers Guide, and The Theory of Gambling and Statistical Logic. He was particularly mocking John Scarne's book, Scarne's Complete Guide to Casino Gambling. The chapter is also lavishly spiced with game stories from Revere's own experience. The thesis of the chapter is that blackjack is a mathematical game and that opinion does not determine the best strategy, Chapter 2 2 The rules of the game The chapter explaining the rules of the game is clearly written, although the language used is like the language of the rest of the book: picturesque. The writing style reminds us of books written by Dale Carnegie, which were written several years earlier. This is the most talked about book on the Blackjack scene. This book has sold more copies since it's first edition than any other playbook. Prior to this new release, there was no foolproof way to learn how to play Blackjack correctly. This is the only Blackjack book that is easy to understand and quite accurate, written for the beginner or for the expert player. Playing Blackjack as a Business was written by a successful professional Blackjack player. The author has probably spent more time playing Blackjack, more time in casinos, and more time in research, than has all the others together who have written Blackjack books or devised Blackjack systems. The book includes a new basic strategy for a tire, the first accurate strategy to be published for four decks, and four easy-to-learn Count Strategies including the Reverse Point Count Strategy, which is the most accurate and powerful strategy ever published. The strategies were designed from computer runs by Julian H. Braun of IBM Corporation, who has long been recognized as the world's most capable man in this field. Lawrence Revere (born Griffith K. Owens; November 5, 1915 – April 23, 1977)[1] was a writer, casino pit boss and professional blackjack player best known for his book Playing Blackjack as a Business. Revere played under several aliases, including Leonard Speck Parsons and Paul Mann. [2] Revere had a degree in mathematics from the University of Nebraska. [3] He died on April 23, 1977 of cancer. Card Count Revere promoted the following card counting strategies developed with Julian Braun, who was detailed in playing Blackjack as a company: The Revere Point Count The Revere Five Count Strategy Reverse Plus-Minus Strategy The Ten Count Strategy of Revere Point Count was very popular at the beginning of counting and is still considered a benchmark strategy. His book only gave the single-deck version. He sold the multi-deck version and it is still sold decades later by relatives. He also sold high-level strategies called Revere Advanced Point Count (RAPC.) These are now generally considered obsolete due to unnecessary complexity – although they are still valid and used today. Revere was a controversial figure as he worked both sides of the game at once (casino and players), advising both sides. But he was also known as a master at avoiding detection by casinos, and as an early proponent of composition-dependent strategy and fluid advantage. [4] And he trained many of the early counters, some of which still use his strategies today. References ^ United States Social Death Index. FamilySearch. He constantly used computer technology to make his system the most efficient of them all. Revere was really an expert in Blackjack. He was involved in the game world for twenty-eight years as a pit boss, dealer, owner, troubleshooter and professional Blackjack player. He started dealing Blackjack at the age of 13 at the back of a barber shop in Iowa, working his way through the University of Nebraska majoring in mathematics. This background made him the first author of a Blackjack book that actually had a lucrative business playing the game from both sides of the table. Revere was a man who could present insider views on gambling, as opposed to others who had studied the business from the outside, then written books by applying credible theories. He was the voice of authority and talked about what he knew best. In addition to his talent as a professional Blackjack player, he taught Blackjack for many years. He developed simple teaching methods that allow the player to easily understand the rules of the game. In addition, following his simple explanation he included diagrams that help the player practice properly. Only a man with a complete knowledge of the game and the best techniques for teaching the game could write the perfect book for Blackjack players. The strategies in this book were designed with high-speed computers by Julian H. Braun of IBM Corporation. He has taken Professor Thorp's original 21 program and significantly refined it to much more accurately analyze any strategy. He has also developed the first program to accurately analyze mathematical expectations for a particular situation in fame 21.
