Bill nye simple machines worksheet pdf

Open Carrier Book Documentary Show Learn Media Store About Learning about science can be hard work, but simple machines can make it easier. Let Bill Nee push and pull you around ramps, levers, screws and polks. Simple machines simply make it easier to work by guiding forces over distances. Instead of lifting a heavy box upstairs, you can hook it into some ropes and curds and pull it up. Or you can take a ramp and take it upstairs either way, using polks or ramps is less than lifting the box directly by yourself because the force you need is expanded further. Levers, ramps, screws, wheels, wedges, and polks are all simple machines designed to guide forces. With simple machines it doesn't have to be as hard to push or drag as hard, but we have to push or drag over a longer distance. It's easier to walk up a long set of stairs to the top of the Empire State Building than it would be to climb the ladder to the top, but the set of stairs would be much longer than the ladder. Simple machines are simply scientific. Large IdeasSimple machines can change the size and direction of forces. Simple machines make it easier for us by letting us push or pull over increased distances. Did you know that? Were the great pyramids built in Egypt using earth ramps? Should you use at least two polks to bring down a drawer? Are sophisticated machines usually a combination of simple machines? Science books! The Science Book of Machines by Neil Ardley. Published by Gulliver Books, 1992. The Way Things Work by David Macaulay. Published by Houghton Mifflin Company, 1988.
