Comes with the Oil Air Filter System A powerful chain can become boring after overuse. Order add-ons. 2/ 10 The HandymanCutting family with a chain at the bottom of the strip is the most common and natural way to cut. The saw pulls slightly and is easy to control by maintaining a firm grip. Cutting from the underside of the branch requires you to cut with the tip of the tape. It's a little disturbing at first because the saw pushes towards you. But it's safe as long as you're well prepared and adhere to all other precautions. However, there is one place on the bar that you should carefully avoid. This place, called the kickback zone, is the top half of the top of the bar. If the return zone comes into contact with something as the chain moves, the saw will start and return to you. That's why modern chainsaws are equipped with a chain brake designed to stop the chain if there's a blowback. This is also why you should always maintain catch your thumb around the front handle. But the best defense is to avoid the kickback zone. The 3/10 Handyman Family Sharp chain cuts well with very little power on the strip, while the boring chain tends to ride in a no-deepening cut. If you force a saw to persuade it to cut, the chain is boring and needs to be sharpened. Also, when the chain spits out dust instead of chips, it's time to grab the round file and sharpen the cutter. Learn more about sharpening a chainsaw to achieve superior performance. 4 / 10 The Handyman familyIs the most common chainsaw injuries on the thigh and left hand can be practically eliminated with only two simple precautions. First, always wrap the thumb of your left arm around the front handle as you cut. This capture keeps the saw under control in case of a blowback. Secondly, when moving from place to place with the saw running, even if it is only on the next branch, always remove the right hand from the back handle and carry the saw on the side with your left hand holding the front handle. Then, if you stumble or trip, there is no way that the saw engine can accelerate and start the spin of the chain. 5/ 10 Family HandymanBuy safety equipment and carry it. Special guys will often stop the moving chain and save your thigh. A helmet with a face screen and ear protection is an appropriate way to keep head, eyes and ear protection handy in one comfortable package. Wear steel-resistant boots and long sleeves to protect yourself from inevitable scratches. 6 / 10 Family Handyman When sharpening the chainsaw, it is easy to get confused about which teeth you have sharpened and which you have not while pulling the chain around the bar. To prevent confusion, mark each tooth with a permanent marker after sharpening it. 7 / 10 Handyman familyYou know how much it costs to make an average repair of small engines? We don't either, but it's a lot! And a huge source of revenue for small engine services are engine repairs that operated old gas. Modern gas formulations simply do not last as long as before. And when the gas begins to spoil, it not only makes it difficult to start the engine, but also breaks the entire system with chewing gum and varnish. So, if you keep gas handy to start a chainsaw, treat the gas with a stabilizer immediately after you buy it. This will save you big money on repair bills later. The 8/10 Gel-filled gloves that cyclists use are great for absorbing the vibrations of power tools such as chainsaws, sanders and lawnmowers. Photo: Aero Tech Designs, Inc. 9 / 10 Family HandymanAs you need to tilt a chainsaw (or lawn mower) to make repairs, here's how to prevent gasoline from running out of the engine ventilation shaft. Put a piece of plastic wrap over the opening, then twist the cap back. 10/10 Family handbook The risk of hearing damage is highest for those using equipment every day. But if you use a vacuum store, leaf blower or circular saw without hearing protection, do permanent damage each time. And that's stupid because hearing protection is so easy. The goal is to reduce noise levels to 90 decibels. All forms of hearing protection – earmuffs, disposable foam ear plugs, multi-ear plugs – are suitable for most noise. In addition to super-loud equipment such as nail framing and chainsaws, it is wise to use both plugs and earmuffs. Of the thessaries we spoke to, some preferred earmuffs, others liked plugs, but they all said the same thing: I hated them at first – annoying, inconvenient, &#amp;#36° annoyance. But after a day or two, I got used to them. Now I actually like them. I can't stand the noise without them. Try hearing protection, and you'll love it, too. Here's how to choose the best hearing protection products. Originally published: April 11, 2017 2017
