## Murray hill middle school schedule

Back on team one's page, the biggest battle when you become a high school parent is this: wrap your mind around the fact that your child (emphasis on the child) will soon be thrown to the wolves – or at least a grumpy bunch that seems to fill your child's future school. Since when do six-year-olds grow chops? Stop breathing in that paper bag. Your baby's going to be fine, we're worried about you. We know that as a parent, it can be hard to see your child grow up and become his own person. Watch them pile on the pressures of new schools, peers, sports and homework, and that's enough to make you want to turn back the clock on simpler days – ones that included coaxing an intrepid toddler to eat broccoli. But that, my friend, is your first mistake. It's time to keep your mental game moving. If your child's foray into high school will be fine (and it is), then you need to get your head into the game. And that means you realize that your child is growing up, and charting a strategy to deal with it before the arrival of the first day of school. Survival Strategy Two: Independence Day Sweet Freedom. High school kids want it, but they can't do much, and maybe you're not ready to let it go. The key is to find a balance that's healthy for both of you. One way to do this is to fulfill your child's desire for freedom (which, by the way, is a natural developmental occurrence) by allowing him to participate in various approved activities. Playing on a basketball team, for example, offers your child an outlet for many things: camaraderie, physical activity and even peer pressure. Yes, peer pressure can have a good side. Just ask every tween who fell pre-algebra, was on the coach's bench and let her teammates down. That's not going to happen again. Even better, organized extracurricular activities offer your child (supervised) a chance to get away from your watchful eyes. But you can still participate by encouraging games, applauding a two-act game, or going to an art show. Whatever your child cares about, give him a way to explore. Your task is to offer boundaries, limitations and support. One way to get to practice your role is when it's time for homework. The National Association of School Psychologists says homework teaches children how to manage time, make decisions and solve problems. Help your child set up a system - a place and time to study with the resources they need - then let them solve your high school homework problems without your hovering presence. Keep in touch with the teachers, even if your child assures you that this is the most unnecool thing you've ever done. That's why some smart person invented email – use it to send an occasional query about your child's performance in class. Survival Strategy Three: Oh, the drama is hard to be tween bent teen-hood. Not only is there increased self-awareness (thanks, puberty), but there's also a number of new meeting situations to encounter. When school turns into a fashion show or popularity contest, all that drama gets a little risky. That's because it's hard for parents to know when to intervene and when to let their son or daughter work things alone. We happen to agree with Joe Bruzzese, author of The Parents' Guide to High School Years, who advises parents to play a supportive role as a mutual relationship form and dissolve. Sure, we were guilty of dialing bad girls' moms and having something to say, but we learned the hard way that it usually doesn't help. Avoid everyday camaradic drama, but be willing to intervene if you feel your child is being bullied. Another minefield to avoid? Fashion. Set a few clear boundaries, such as the length of the hem or belt stopping point, but be willing to let your child have some word in what he or she wears. While tweens are clamoring for friendship in high school melee, they are likely to try different styles. Personally, we don't start to worry until they're into the game about tattoos and more piercings. When you're running your high school, remember: Your role isn't perfect. Shake off any nassing doubts about your self-worth that may bubble to the surface for the first time since chaperone in high school dance. (Hey, it happens!) The key is to get involved, even if you allow for more autonomy. According to a report by Johns Hopkins University researchers, when you're in memory of the high school scene, your child is more likely to have better grades, attendance, and home skills. Plus, they're going to be in high school. Hyperventilation again? It's OK. You can put the paper bag down. We'll leave our high school discussion for another time. Page 2 back-to-school time means stocking pencils, glue sticks and other traditional necessities that generations of kids have stored away in tables, cubbies and lockers. In primary and secondary schools, teachers usually provide lists of specific items to be picked up; and even in high school, many instructors require certain types of laptop paper, pens and the like. In addition to the classic supplies – crayons, laptops, rulers – that keep these lists back to school, there are many others to keep in mind. Today's student has an arsenal of dishes and things to help him manage the workload and improve the learning experience. Whether it's a fresh spin on a classic or newfangled gadget, these five cool school tools make classes to get your son or daughter to study in style. Content I pre-K students can get a head start on their computing know-how with learning laptops. For less than \$50, these laptoplike gadgets can enhance the basic skills they learn in a fun classroom, games and activities. In its short history, learning laptops now come in pocket sizes with more sophisticated graphics and a wide range of software that covers subjects including reading, math, foreign language and more. Children can browse many of these models with a keyboard, electronic stylus or control pad with an interface such as a video game system. For high school and high school students who need word processing and internet access, netbooks are a great choice. Priced at several hundred dollars, these mini-laptops have been grabbing tech headlines for their usefulness and affordability. In fact, some schools are starting to use netbooks in the classroom thanks to their budget-friendly assets. Advertising Finding the perfect backpack is crucial for many school-age children. After all, they tote it around with them every day and want it to make a cool impression. Parents are probably more interested in the toll the pack collects on those young backs. Fortunately, there are alternatives that will please both sides. Unfortunately, you will probably have to spend more money in exchange for ergonomic quality. To protect the back and spine, look for packages with plenty of padding. Padded straps and back panels are good marks. Make sure that the straps are close to the body and that the backpack comes with a chest strap for more support. When carrying a backpack, you should sit higher on your back, rather than straining your spine by hanging down on your hips. There are also scrolling backpacks to choose from, but some schools no longer allow them. And they might distract from the crucial cold factor your student demands. Advertising It is important that school children learn to add, subtract and so on in the head - with the occasional help of fingers and toes. But when higher math rolls around in lower middle and forward, it's time to pull the big guns. Calculators have been a routine item in older children's backpacks for a while now, and now offer more math and science help than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, storage and preinstalled tutorials on some models. Students can now also choose from more aesthetically pleasing calculators, such as chewing gum pink charts and models for beginners. The Pencil and Paper ad never go out of style for taking notes. But for techie students out there who want to get the most out of their note-taking capabilities, Smartpens are sleek and relatively cheap at around \$150. LiveScribe's Pulse Smartpen writes on specialized paper that digitally records what you write and where on the page. At the same time, the pen can also capture sound, which means that the student can take notes and record the lecture on Time. When it comes time to study, smartpen hooks up your computer to download all the notes to one source. In this way, students can place the Smartpen on notes on specialized paper to hear the corresponding sound. If your student doesn't require as much tech magic, FLY Fusion Pentop Computer from Leap Frog also digitally records what the student is writing. The writing device then converts the written notes into digital documents. Like the LiveScribe Smartpen, Pentop also requires specialized paper. Since pentop does not store sound, there are many discreet mP3 recording devices and audio recording add-ons for iPods that can perform this feature advertising between notes-taking, laptop learning and backpack wielding, children must do their homework. Whether it's solving a difficult math problem, researching a science fair project or creating a bibliography for seminary work, the web holds a plethora of educational resources. But tracing the best of these resources can be challenging, and parents may hesitate to launch their children online. Fortunately, some companies have developed robust home support programs for students of all levels of learning. DiscoveryEducation.com example, provides assistance for seven different disciplines, along with interactive games and external web links tailored to students for further tutoring. For a monthly fee, Cosmeo by Discovery Education is a one-stop-shop for Discovery videos, scientific articles, step by step academic teaching and more. By leveraging the breadth of valuable information online, children can improve their learning experience and continue to do + degrees. Advertising
