Belt fed ar

DESCRIPTION SPECIFICATIONS RELATED PRODUCTS Our innovative set of MCR® (Mission Configurable Rifle) belt-powered top receivers is designed to exchange with standard AR/M4 tops and readily fits any MIL-Spec bottom receiver without permanent modification to the lower host, and is compatible with the rearview mirror for ar15/m16 models produced as early as 1963. The MIL-Spec MCR® 5.56 DFR takes our standard mcr® technology to an entirely new level and includes all accessory items that are included in our standard MCR® government product, along with Dry Film Lubrication on critical high-friction surfaces for extra performance in extreme conditions. Once installed, the patented MCR® top receiver system can be configured by the user in seconds without tools to adapt to virtually any mission profile. Specifically designed for responsible armed citizens, police officers and security professionals who wish to upgrade their rifle or carbine to MCR® performance and capability; Standard features include gas piston operation for extreme reliability in harsh conditions; a fast-changing 16.25 barrel system (3 seconds) and a 1913 MIL-STD cooperative handguard with rail interface system for mounting modern optics and accessories. Covering the range of capabilities from the optical ready carbine to a lightweight support rifle; MCR® accepts standard AR15/M16 box magazines or A M27-bound ammunition at the operator's discretion, allowing unprecedented firepower and weapon flexibility. WARNING: This product is currently restricted to sale or possession by individuals in the States of Colorado, Connecticut, Maryland, Massachusetts, New Jersey, New York, and Washington D.C., and may also be restricted in other jurisdictions. Laws relating to firearms and firearm accessories often change and evolve, and it is the buyer's responsibility to be aware of and always comply with all laws and regulations. All FightLite® Industries products are controlled by ITAR and cannot be exported from the United States of America without prior authorization from the U.S. government. Product design, features and/or specifications are subject to change without notice or obligation to incur. SOLD OUT (This top receiver cannot be used in full automatic kills unless by a C2 manufacturer.) This durable milled steel top receiver changes the belt-only feeding method and the gauge for 8mm or 308 Mauser. It does not require any modification to its lower receiver. It simply cuts as the upper receiver AR-15 / M16 standard. Each XMG comes complete with all parts except for the bottom receiver. It is capable of semi-automatic operation only with AIR-15 and variant weapons and selective with M16 weapons and variants, but may not be used on transferable machine guns. It has a cycle rate of 700-1000 rounds per minute. Original MG34 MG34 components and screws cannot be entered in the XMG configuration. The XMG is powered by MG34/42 50 flexible rounds, metal belts, two or more of which can be joined end to end. Its design is based on the MG-34 and uses some parts of the MG-34. The most important is the screw head, barrel, feeding cap/tray and muzzle parts. Shown in the MG-34 Sustained Fire Kit XMG Shown on the MG3 Soil Mount modified with Hendsoldt Optics. (Hill price: \$750) Displayed on AA Mount with BRP adapter 34 to 42: Original photo, uncut used for shotgun news article april 5, 2010. This excellent photo of an XMG shooting drones in Big Sandy was graciously provided by:Richard MacLean, www.MacLeanTech.com. One XMG simply isn't enough. Shown in a modified MG3 dual mount. MG-34/XMG 308 Conversion 308 Feed Tray with Link Guide M13/M60: How it works Once the original power block is modified to assist the 308 power supply, it will continue to work with 8mm as well. At this point, simply switch the quick detachment pipe and the feed tray to the desired gauge. Since 308 is a pressure round lower than 8mm, you may want to replace the 8mm propellant with the 308 propellant to increase the cyclic rate. Be careful not to use the 308 propellant when firing 8mm. XMG Transit Chest: \$375 (free ship in lower 48) From Customers I'm enjoying my new gun. I shot it in the 308 and 8mm settings with no problems. The 308 was outside, and I threw 8mm into the house. The sparks were flying from the traps!!! I just got my XMG 34 last week. My six kids and I were able to go to the break on Saturday and we put 42 belts from 50 rounds through the XMG and ran perfectly. We had a great time. Thank you very much for delivering an excellent product . Michael R. L., M.D. in North Carolina 1/9/2006 HEY BRIAN JUST WANTED TO CHECK IN... MY XMG IS RUNNING FLAWLESSLY, SEVERAL CASES AMMO DOWNRANGE TONY H By David Crane defrev (at) gmail.com October 25, 2010 Updated/Modified 25/10 A company called Valkyrie Armament has just come out with a Shrike type (ARES Defense Systems Shrike 5.56 LMG/SAW-type) 5.56x45mm NATO (5.56mm NATO)/.223 Rem. BELT-powered AR/carbine/SBR (Short Barrel Rifle) rifle that looks pretty good. The Valkyrie Armament Belt-Fed AR is supposedly basically a modernized and improved Stoner 63 weapon system. The VA Belt-Fed AR uses an M249 SAW ammo box to feed the strapped ammunition. Making the switch to the mag-fed operation (powered by magazines) is quick and easy. Just push the rear pin, push the mag release button, pull the belt feed tray out of the top and close the rifle back by pushing the rear pin back inside. Bam. Now you can run mag-fed. DefenseReview (DR) doesn't know how reliable the VA Belt-Fed AR is in its belt-fed or mag-fed configs, however, since we haven't run it, nor have we seen any high round test count/adverse adverse conditions in the gun. That said (or in this case written), anyone who has read DefenseReview (DR) for any length of time knows that we really like our belt-powered machine guns here, so just from the photos and videos we've seen so far, we like this thing. Perhaps we should mention that our mag-fed (mag-fed) AR configuration designed for sustained self-automatic fire, at the moment, it is the FERFRANS Specialties/op-rod (operating rod) tactical carbine AR/SBR, which uses an exclusive version of the Adams Weapons Gas Piston System that incorporates/integrates FERFRANS's patented rate reduction system (RRS) FERFRANS RRS brings the cyclic rate of weapon fire (ROF) under the 700 rpm threshold. This is important, since FERFRANS weapons operate from the closed screw position. However, FERFRANS RRS is also not a bad idea for a belt-powered AR. In both cases, the reduced cyclic ROF will mitigate/mitigate the recoil and increase of the muzzle, and reduce the heating of the barrel and the gun (including chamber heating). You just don't need to go over 700 rpm in a NATO 5.56mm /.223 Rem. LMG/SAW or IAR. So how does the Valkyrie Armament Belt-Fed AR weapon system compared to Ares Defense Shrike 5.56 with regard to accuracy, reliability, durability and controllability in full-auto? Dr doesn't know, but maybe someone out there can make a side-by-side comparison and review for us. If you're out there, we're here, and we look forward to hearing from you. We'd also like to see the Belt-Fed AR equipped with the Ferrfrans RRS, and see how the combo does. It should work very well (unconfirmed/unverified). In the meantime, let us know what you think commenting, below. We look forward to hearing from you, too. The information is from the Valkyrie Armament website: Full rifles powered by belt: New Colt 6920 or Colt 6721 H-Bar (Heavy Barrel) R \$ 4,500.00 - Caliber: 5.56mm (.223Rem) - Barrel length: 16.1 in. (41cm) - Weight: 5.95 lb. (2.67kg) - Fire Control Selection: Semi-Safe - Method of Operation: Gas; Direct system; Lock screw - Magazine capacity: 2-20 round mags - Front view: Adjustable front - Rear view: Adjustable target sight for winding & lifting – Bodyguard: Oversiz New Smith & Wesson (S&W) M&P15 Rifle R\$ 3900.00 – Caliber: 5.56 mm NATO / .223 - Capacity: 30 Rounds, 5.56 mm or 0.223 - Barrel Length: 16 - Action: Semi-Automatic Operated Gas - Total Length: 35 Extended / 32 Compacted - Stock: 6-Position Telescopic - Forend: Thermo-Set M4 Handguard - View Length: 14.75 - Barrel Turnover: 1 in 9 - Weight (No Mag): 6.74 lbs. – Trigger Pull: 7 lbs. (approx.) - Upper/lower material: aluminum 7075 T6 - Barrel 4140 Steel - Chrome Components: Barrel hole, gas wrench, screw carrier - receiver and barrel barrel Anodized Black Hard Coat – Front View: Post Adjustable History: Valkyrie Armament LLC while new in the name is not new in the field of manufacturing in valkyrie armament we have machined many different components, as medical drafting components, titanium coating anodes for oil and gas power generation for companies such as BP, Halliburton, GE, and Siemens, we make metal forming equipment for the custom car and motorcycle industries that have been seen in numerous television programs and recently in iron man 1 and 2 movies. Our equipment is also used by Marine Corps University, the Air Force, DynCorp International for its Apache helicopter maintenance support teams, Los Alamos National Lab, to test their new polymer compounds, they are also at the Pearl Harbor Pacific Aviation Museum on historic Ford Island for maintenance and restoration on the old warplanes just to name a few. As for Valkyrie LLC armament, it was formed in 2009 after a lifetime of firearms enthusiasts we decided it was time to put our manufacturing expertise to work in the firearms industry, so we decided on a historic project to resurrect the powered design of the stoner convertible belt and so we introduced the new BSR-mod 1 Life , freedom and the pursuit of happiness... – For those who are looking for this tactical project, powered strap, 5.56 mm weapons platform... Valkryie armament is your answer. Born of an idea that Life, Freedom and the Pursuit of Happiness begins with a hot, belt-powered rifle, Valkyrie Armament reinvented the time-tested model of Eugene Stoner's belt fueled by conversion into a modern phoenix. Shoot a... and you're going to want one. – In shooting sports, there are many options for you to consider when looking for a semi-automatic weapon. Rifles, pistols, rifles... out there for you to consider. When searching for a powered belt, weapons platform, however, your options are much more limited. Cost, function and caliber are three areas of concern that Valkyrie Armament considered when improving stoner design. There is a more affordable powered, 5.56mm rifle belt on the market today. Why did a belt feed AR15-style rifle? Because you can. - We've all heard that before... Why do you have an assault rifle... Why do you need a scary, black rifle... Why, why? Simply put, because you can. In this great land of ours, the freedoms we all enjoy were born in the barrels and pants of our ancestor's flintlocks. This truth is undeniable; however, it is continually under siege from the violent storm of the opposition. Valkyrie Armament is your channel to politely tell those who ask you why... to go pound Credentials: 39 years of experience in machining 18 years of experience USMC veteran combat officer 10 years full-time Leo Colt certified armorer Glock certified firearms instructor certified Company Contact Info: Valkyrie Valkyrie LLC Class 2 SOT 7850 Root Rd.
