By Greyson Ferguson If you are downloading video files from the Internet, you will find that many are not very good quality because they have audio problems and the video can seem grainy. To solve this problem, a specific video cleanup program is needed that can patch and clean these problems. Fortunately, there is a video cleaner that is free to download and is able to clean a variety of video formats. Under Resources, follow the link to the River Past Video Cleaner download page. This cleaner can clean up all the video file format you have. Click On External Mirror 1 and downloading begins. Open the downloaded file when it is finished downloading. This will start the Setup Wizard. Accept the license agreement and follow the other prompts to complete the installation. Open River Go Video Cleaner. Click File, Open. This will open a small search window. Select the video file you want to clean up. Type the name and location of the output file that says Output. Select a file type, such as Mov, WMV, or MP4. The program starts to scan the video file and clean what it can. Depending on the size of the file, this process may take several minutes. Once it is finished, it will be possible to watch the new video and see how much it has improved the quality of the video. Buy any type of higher end video editing software such as Avid, Final Cut or to a lesser extent Pinnacle. These programs all offer a variety of video editing options, including cleaning video quality. Open the software and import the video file. You can usually do this by clicking File, Import, or clicking and dragging the video file editing program. Open the video editing software effects panel. Select either color correction or image stability (among other things) and drag the effect to the video file. The color correction feature allows you to adjust the color of the image, while the image stability option zooms slightly into the image and focuses on the main point, which removes all unnecessary camera shaking. Render video and the effects are saved onto the video. Complete the video cleanup process by exporting the file. By Contributor Renewed May 07, 2020 The Internet is both a blessing and a burden for music artists. Websites like YouTube have allowed artists to reach millions of audiences, but they have received little financial reward. If you have artist or just someone blog, you probably want to find a way to get your music out there; uploading a song to MP3 for someone to download is a great way to gain traction. Go Mediafire.com. You can find the MediaFire link in the Links section below. On the bright green home page, click Upload MediaFire. Select the file you want to upload by clicking on the pop-up menu. On your hard disk, locate MP3 and select Open. Your file now appears in the File name box. Click Start uploading files. Depending on the size of your MP3 file and the speed of your Internet connection, it may take less than a minute to an hour. The blue bar tracks the progress of the upload. This shows the Copy link option next to The Edit. Copy and paste the link (see picture above in the red box) that MediaFire offers when uploading. You can use this link on your blog or website to share your MP3 file with your friends or readers. By clicking on the link, users will be brought to the MediaFire website and can be downloaded from MP3 for free.
