are usually more expensive shipments, delivery companies always require a signature proving that the shipment was received and in good condition when it arrived. That's why it's so important for customers to carefully check the shipment for damage, even on boxes when they receive an LTL shipment. If you sign that everything is in good condition and later find the damage, you may be in a stream! Since LTL shipments are more expensive and intense, carriers want to make sure they won't later qualify for the shipment. So they need your signature. Remember: carefully check the shipment when you receive it, and write down everything you see that it looks like it could be damaged before signing. And if it looks damaged, do not hesitate to simply refuse the shipments are heavier and are usually on a wooden pallet, the delivery driver couldn't pick up the pallet and bring it to your door even if he wanted to. So LTL shipments are usually shipped either to the loading bay at your place of work or to the curb if it's a residential delivery. This is simply the closest to your driver's door delivery can often get a shipment. Whenever possible, we add to all our shipments, at our expense, to help make delivery as painful as possible for our customers. But this is definitely an expensive and have more problems for carriers and for customers, why would we ever ship an LTL shipment?!? Why not send with a small shipment

every time? The answer is very simple, and it's twofold. The biggest reason is that small parcel shipments have a limit of £150 as well as a size limit. So many of our tables just can't be shipped with a small package rack because they're too big. The second reason is that, if they were allowed to

transport with a small consignment, Destroyed. One huge benefit for LTL shipments is that because they are usually delivered on pallets, damage is rarer. Pallets keep the boxes tied up and in place so they don't jostle around and move around in the truck. And that's very important because they're so hard. So despite the attenuation of receiving LTL shipments, damages are usually avoided. What are some tips for receiving an LTL shipment that we could offer? Here are a few: They have 2 or 3 relatively strong people ready to accept the shipment when it is scheduled to arrive so they can pick up boxes from the pallet and carry them wherever they have to go. This will make it much easier to receive the shipment. Carefully inspect each box on the pallet before signing the delivery note. Make sure you don't see any damage to any of the boxes. If you do, either open the box right then check the damage or clearly mark on the delivery note that the box or box has been damaged. Don't expect the delivery driver to do you a favor and bring the shipment to your home or up to the third floor office. We usually add an internal delivery service to our customers, but each additional service with the LTL operator brings an additional fee. To bring a shipment higher than the first floor is an additional charge and usually requires a freight elevator. So if you don't have enough strong people who can pick up boxes when the shipment arrives, be sure to ask to add these features in advance so you get just what you need. If you don't get a call about delivery time, ask questions until you get the delivery without

being aware of the damage control). Any more questions? I would love to offer my thoughts. Just call us at 866-388-8848 or shoot us an email at service@officedesk.com!Comments will be approved before viewing. Up.
